EXECUTIVE SUMMARY

On the behalf of the Passaic County Department of Economic Development (PCDED), Dewberry-Goodkind, Inc. (Dewberry) performed a Preliminary Assessment (PA) of the property formerly known as the Pyrolac Corporation, located at 55 Schoon Avenue in Hawthorne, Passaic County, New Jersey. The site consists of one tax lot (Block 17, Lot 11) measuring 2.45 acres in size. The site has been vacant since the owner (Pyrolac) abandoned the property in April 1995. The performance of this PA has been funded through a United States Environmental Protection Agency (USEPA) Brownfields Grant issued to the PCDED to inventory and investigate sites in Passaic County that have been contaminated by hazardous substances, pollutants, or contaminants. The site was selected for assessment by the PCDED due to known soil and groundwater contamination identified during past investigation activities performed by the New Jersey Department of Environmental Protection (NJDEP) and the USEPA.

The PA was performed to evaluate the current status of previously identified areas of concern (AOCs) as well as the presence of additional AOCs not previously encountered. As part of this scope of work, Dewberry conducted a review of available documentation regarding the environmental history of the site and the surrounding area, including Environmental Data Resources (EDR) databases, historical aerial photographs and topographic maps, government records, and other information sources. Dewberry also performed a site reconnaissance of the property and surrounding area.

The site was abandoned by Pyrolac in April 1995 following a Chapter 11 Bankruptcy filing. Due to reported discharges, odors, and chemicals remaining at the site, the USEPA performed a Removal Assessment at the site on November 16, 1996 in which they reported the presence of numerous chemical drums and storage containers in various condition. Following a fire in June 1997, the USEPA returned to the site in February 1998 and performed a Removal Action in which all remaining chemicals stored at the site were reportedly removed and disposed off site. Site investigation activities performed by Pyrolac and the NJDEP during the 1980s and 1990s have identified volatile organic compound (VOC) and semi-volatile organic compound (SVOC) contamination in soil and groundwater at the site.

The following AOCs were identified at the site during the PA:

- 1) Former drum storage areas (previously identified)
- 2) Former disposal trench (previously identified)
- 3) Eleven chemical USTs (previously identified)
- 4) One heating oil UST (previously identified)
- 5) Documented VOC and SVOC soil contamination (previously identified)
- 6) Documented VOC and SVOC groundwater contamination (previously identified)
- 7) Floor drains and integrity of flooring within site structures (newly identified during the subject PA)

Based on the PA results, Dewberry recommends that a Site Investigation (SI) be performed on the property per the requirements of N.J.A.C. 7:26E. The SI will focus on the AOCs identified

during the previous SI activities and the subject PA and will involve both soil and groundwater sampling to confirm the presence, type, and level of contamination on the property. The soil sampling activities will include surface and subsurface soil sampling within the AOCs. The groundwater sampling activities will include the refurbishment of the existing monitoring wells (surge-block and development) and collection of groundwater samples.

1.0 INTRODUCTION

On behalf of the Passaic County Department of Economic Development (PCDED), Dewberry-Goodkind, Inc. (Dewberry) performed a Preliminary Assessment (PA) of the property formerly known as the Pyrolac Corporation, located at 55 Schoon Avenue in Hawthorne, Passaic County, New Jersey. The site consists of one tax lot (Block 17, Lot 11) measuring 2.45 acres in size. The site has been vacant since the owner (Pyrolac) abandoned the property in April 1995. The performance of this PA has been funded through a United States Environmental Protection Agency (USEPA) Brownfields Grant issued to the PCDED to inventory and investigate sites in Passaic County that have been contaminated by hazardous substances, pollutants, or contaminants. The site was selected for assessment by the PCDED due to known soil and groundwater contamination identified during past investigation activities performed by the New Jersey Department of Environmental Protection (NJDEP) and the USEPA.

1.1 Purpose

The purpose of conducting the PA was to identify the presence of any environmental areas of concern (AOCs) at the site. If any AOCs are identified, Dewberry will recommend that a Site Investigation (SI) be performed at the site. This PA report was prepared in conformance with the NJDEP Technical Requirements for Site Remediation N.J.A.C. 7:26E, Subchapter 3 – Preliminary Assessment and Site Investigation and the USEPA Standards and Practices for All Appropriate Inquiries (AAI) – Final Rule (40 CFR Part 312), and the American Society of Testing Materials (ASTM) E 1527-05 “Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process”.

Where observed by, or reported to Dewberry, potential hazardous substances or petroleum products that are present at, or adjacent to, the site (even if they are being used, stored, treated, transported, or disposed of in compliance with applicable Federal, state, and local laws and/or regulations) are identified in this report.

1.2 Scope of Work, Assumptions, and Special Terms and Conditions

The PA performed included a site visit, appropriate inquiry of Federal, state, county, local, and certain proprietary records, and interviews of owners, tenant(s), purchaser(s), and lessee(s), as deemed applicable by the environmental professional. There were no deviations from these standard procedures.

1.3 Limitations, Exceptions of Assessment, and User Reliance

The observations in this assessment report were made under the conditions stated herein. The conclusions presented in this report are based solely upon the services described therein, and not on scientific tasks, sampling, testing, or procedures beyond the scope of described services or reasonable time and cost constraints.

This PA cannot wholly eliminate all uncertainties regarding the potential for AOCs in connection with a property. The preparation of this PA is intended to reduce, but not eliminate, uncertainty

regarding the potential for AOCs in connection with a property, recognizing reasonable limitations of time and cost.

In preparing this report, Dewberry has relied on certain information provided by state and local officials, information and representations made by other parties referenced herein, and on information contained in the files of state and/or local agencies made available to Dewberry. To the extent that such files are missing, incomplete, or not provided, Dewberry is not responsible and provides no warranty, expressed or implied, regarding this data. Although there may have been some degree of overlap in the information provided by these various sources, Dewberry did not attempt to independently verify the accuracy or completeness of all information received or reviewed.

Unless otherwise noted in the report, this PA is restricted to AOCs located at the site or AOCs located off site with the potential to impact the site. This PA has been prepared for the exclusive use of the client and no other parties may rely on the findings or recommendations presented herein. This document was developed to reflect a specific site and its site conditions and is not to be used for another site or when other conditions pertain. Reuse of this document is at the sole risk of the user.

2.0 DESCRIPTION OF SUBJECT PROPERTY

2.1 Physical Setting

Dewberry reviewed the United States Geological Survey (USGS) map of the area surrounding the site. The Paterson, NJ USGS 7.5 Minute Topographic Quadrangle (Photo revised 1981) indicates that the area generally slopes slightly to the south towards the Passaic River, located approximately one quarter mile south of the site. Elevation at the site is approximately 50 feet above mean sea level (msl). Figure 1 presents a USGS map showing the topography of the site and surrounding area.

Dewberry obtained data from Environmental Data Resources, Inc. (EDR) in the form of an “EDR - Radius Map with GeoCheck” report that provides a map detailing the 100-year and 500-year flood zones as defined by the Federal Emergency Management Agency (FEMA) and known wetland areas as identified in the United States Fish, Game & Wildlife Service, National Wetlands Inventory (NWI). No wetlands are mapped at the site or on adjacent properties. The site is located within the 100-year and 500-year flood zones.

The site is located in the Triassic Lowlands of the Piedmont Physiographic Province of New Jersey. The subsurface aquifer of concern is the Passaic Formation, formerly known as the Brunswick Formation of the Newark Supergroup. Groundwater movement and storage within this aquifer is primarily due to extensive fracturing of its component rocks. The Passaic Formation is mainly composed of red siltstone, shale, sandstone, and conglomerate. Within the area of the site, the primary water-bearing zone ranges from less than 200 to 600 feet in depth.

Site soils consist of glacial deposits from the Wisconsin Glacial Period. These deposits overlay the Brunswick Shale Formation. As confirmed during previous environmental investigation

activities, overburden soils at the site consists measure in thickness from 25 feet to greater than 35 feet. A layer of fill material overlies these soils at grade, measuring in thickness from one to seven feet across the site.

Groundwater exists at the site above the bedrock in limited quantities in localized, perched water-bearing zones as well as on top of the bedrock surface. The perched groundwater zones are the result of low permeability lenses where the subsurface glacial deposits have very high silt and clay content. To date, eight groundwater monitoring wells (identified as MW-1 through MW-8) have been installed on site. Wells MW-1, 2, and 3 were installed to depths of 15, 15, and 19 feet, respectively, in perched water-bearing zones. Depth to groundwater in these localized, perched zones has varied historically based on stormwater accumulation. The most recent well gauging data collected on August 11, 2009 indicated perched water-bearing zones at well MW-2 at 10.4 feet below grade and at well MW-3 at 21.09 feet below grade. Well MW-1 was dry during the August 2009 gauging event indicating that this previously observed, perched water zone was dry during this gauging event.

Wells MW-4 through MW-8 were installed to depths of 19 to 30 feet below grade in the deeper water-bearing zone on top of the bedrock surface. Depth to groundwater across the site in this deeper water zone ranged from 8.45 feet below grade in well MW-5 to 11.46 feet below grade in well MW-6 during the August 2009 gauging event. The groundwater flow direction of the lower water-bearing zone (on top of bedrock) has been mapped in a southerly direction across the site towards the Passaic River, located approximately one-quarter mile south of the site.

2.2 Property Location, Improvements, and Current Use

The site is located in a mixed industrial and residential area of the Borough of Hawthorne in Passaic County. The site measures approximately 2.45 acres in size and consists of Block 17, Lot 11 on the tax maps of the Borough of Hawthorne. The site is bordered to the north by Nexus Plastics Corporation (a plastics manufacturer), to the west by the Erie-Lackawanna Railroad, to the east by residential properties and Passaic Avenue, and to the south by mixed residential/commercial development and Schoon Avenue. A copy of the Borough of Hawthorne Tax Map showing the site is included as Figure 2. An Area Map showing the site and surrounding area is included as Figure 3. A Site Plan showing features within the site is included as Figure 4.

The main facility building measures approximately 20,000 square feet. The site has been vacant since Pyrolac abandoned the site in April 1995. A facility fire was reported at the site on June 11, 1997 involving a section of the building which appeared to be a quality assurance/quality control (QA/QC) laboratory. Based upon a review of historical documents, structures remaining on site include a former manufacturing facility, former drum storage building, former solvent storage canopy, former office area, and a former concrete block storage shed. Also, still present on site are 11 underground storage tanks (USTs) previously used to store bulk liquids used in the production processes performed at the site. The status of these USTs is discussed in Section 2.4.1.

The site is surrounded by a chain-link fence with a locked entrance gate on Schoon Avenue.

Since its abandonment, according to the Borough of Hawthorne Fire Department, the site has been vandalized on four separate occasions. Currently, the perimeter of the site is overgrown by trees, shrubs, vines, and other foliage to the point that the interior of the site is not visible from the fence line.

2.3 Historical Owners and Operators

Based on a review of historical Sanborn Fire Insurance Maps (discussed in Section 3.2.2), the site was undeveloped in 1922. The earliest identified owner of the site was the Fair Lawn Finishing Company (FLFC). FLFC owned the site from 1940 to 1946. The site was then purchased by Frederick J. and Emily R. Wright. On-site activities conducted by FLFC and the Wrights are unknown. The site was purchased in 1947 by the New Jersey Lacquer Company, Inc. (NJ Lacquer). The main manufacturing facility and concrete storage shed were constructed between 1940 and 1951. On February 4, 1966, the site was sold to Vulcan Lacquer & Coatings Co., Inc. (Vulcan Lacquer). At that time, Vulcan Lacquer was owned and operated by Monroe and Pauline Rappaport. In March 1967, Vulcan Lacquer, a Delaware Corporation, changed its name to Pyrolac Corporation (Pyrolac). In 1977, the Rappaports sold Pyrolac to Gail and Stephen Dulberg. In 1984, Pyrolac, the Delaware Corporation, merged into Pyrolac, the New Jersey Corporation. In 1986, Pyrolac became a wholly-owned subsidiary of the Mark-Ivy Corporation. On December 1, 1992, the Borough of Hawthorne placed a lien on the property due to unpaid property taxes. In May 1994, Pyrolac filed for Chapter 11 bankruptcy. In October 1994, the case was converted from Chapter 11 reorganization to Chapter 7 liquidation. At this time, Pyrolac ceased all operations at the site. In April 1995, Pyrolac informed the United States Bankruptcy Court of its impending abandonment of the site.

2.4 Historical Property Use

The site has been vacant since it was abandoned in April 1995. During its operations, manufacturing activities conducted at the site included the production of primers, lacquers, bake enamels, water reduction products, high-solids coatings, and solvent reducers and cleaners. A majority of the products manufactured at the facility were custom-blended paints for industrial use clients.

2.4.1 Bulk Storage Activities

Bulk raw materials used in the production processes were stored in the USTs located in the northern corner of the site. Additional raw materials were also delivered to the facility in 55-gallon drums and smaller containers and stored in various warehouse facilities at the site. Eleven USTs were used to store bulk raw materials as follows:

- One – 3,800-gallon Lacquer Thinner UST
- One – 4,000-gallon Toluene UST
- One – 3,800-gallon Methyl Isobutyl Ketone (MIBK) UST
- One – 6,000-gallon VMP Naptha UST
- One – 6,000-gallon Xylenes UST

- One – 6,000-gallon Recovered Solvent UST
- One – 2,000-gallon Isopropyl Alcohol UST
- Two – 2,000-gallon Mineral Spirits USTs
- One – 2,000-gallon Butyl Alcohol UST
- One – 2,000-gallon Butyl Acetate UST

Historical documents indicate that the tanks are at least 30 years old. Although the above listed USTs (totaling 39,600 gallons in combined capacity) are still present at the site, the residual contents within these USTs were removed and disposed off site during the USEPA Removal Action performed in February 1998. Additional raw materials including resins, pigments, and various additives, as well as finished products were stored in both interior and exterior warehousing facilities at the site.

In addition to the above USTs, the facility formerly utilized a heating oil UST, situated south of the main building. Although the fill port and vent pipe were located during the August 11, 2009, site inspection, the heating oil UST capacity and current status are unknown.

2.4.2 Waste Disposal Activities

While in operation, waste materials generated during normal site production activities were reportedly USEPA classified, transported off site, and disposed by a licensed industrial waste hauler. Waste material transported off site included recovered waste solvent which was processed and returned to the Pyrolac facility and used to clean various paint production tanks.

As discussed in further detail in the following section, a disposal trench measuring 3 feet wide, 3 feet deep, and 25 feet long was installed in 1970. Pyrolac disposed of the contents of three 55-gallon drums of cellulose acetate from an off-site source (identified as Ply-Gem Corporation of Queens, New York) in this trench. Upon discovery of these operations, the Hawthorne Fire Chief ordered the cessation of receiving, storing, and dumping of waste materials in the trench. The subject trench was subsequently backfilled.

Following the abandonment of the site in April 1995 and the facility fire in June 1997, the USEPA performed a Removal Action in February 1998. During the Removal Action, in addition to the residual contents of the USTs discussed in Section 2.3.1, numerous waste and raw material containers located throughout the site were removed and disposed off site.

2.5 Summary of Prior Remedial Investigation and Remedial Action

The Hawthorne Fire Department issued a Notice of Violation (NOV) to Pyrolac on September 1, 1970. The NOV indicated that Pyrolac should “machine a ditch around the outside of the above ground storage area” for spill containment purposes. In response, Pyrolac reportedly used a backhoe to excavate a 3-foot by 3-foot trench located at the eastern side of the property, away from any above ground storage locations. The trench reportedly measured 25 feet in length. A former Pyrolac employee reported that waste material, consisting mainly of “isopropyl alcohol with some plastic and resin”, was disposed in the trench. Pyrolac personnel and Borough of

Hawthorne representatives have disagreed over the details regarding the directions given for the construction of the trench. The Hawthorne Fire Chief ordered the cessation of receiving, storing, and dumping of waste materials in the trench. The subject trench was subsequently backfilled. Pyrolac was cited on numerous occasions by local officials for poor housekeeping issues, both interior and exterior, including the presence of numerous “leaking” drums. Following facility inspections conducted in March 1977 and 1979, the Hawthorne Bureau of Fire Prevention issued violations to Pyrolac citing poor material handling and storage practices in indoor and outdoor work areas and long-term storage of an accumulation of returned materials.

The NJDEP performed a Resource Conservation and Recovery Act (RCRA) inspection of the site on May 6, 1985. Reported findings of this inspection included the presence of both indoor and outdoor spills, 11 USTs, indoor floor drains, storage of waste materials for longer than the RCRA required 90 days, and incorrect manifesting of hazardous wastes. Materials stored in the USTs included xylenes, methyl isobutyl ketone, toluene, lacquer thinner, butyl acetate, mineral spirits, and isopropyl alcohol. The NJDEP collected two samples during the inspection, one from the solvent distribution room floor drain and one from a stained soil area at the rear of the property. Analytical results of these samples indicated the presence of toluene, ethylbenzene, bis(2-ethylhexyl)phthalate, chloroform, methylene chloride, naphthalene, 1,1-dichloroethene, dibutylphthalate, and isophorone.

The NJDEP issued an Administrative Consent Order (ACO) to Pyrolac in July 1985 for operating as an unpermitted generator of hazardous waste and an unpermitted transport, storage, and disposal facility (TSDF). Pyrolac reportedly agreed to clean up the areas found to be contaminated per the May 1985 analytical data. On August 1, 1985, Pyrolac contracted with S&W Waste to remove the top four inches of soil from the northwestern drum storage area. In August 1987, the NJDEP determined that Pyrolac had violated the State’s Water Pollution Control Act and directed Pyrolac to conduct a Remedial Investigation (RI). On January 1, 1990, the NJDEP issued Pyrolac a New Jersey Pollutant Discharge Elimination System (NJPDES) Permit (No. NJ0073563) for a discharge to groundwater.

Pyrolac contracted with SESI in 1988 to conduct a RI at the site. The AOCs investigated included the USTs, backfilled trench area, outdoor drum storage/spill areas, and indoor floor drains. At the time of the RI activities, the floor drains had reportedly already been filled with concrete. In June 1988, five on-site groundwater monitoring wells were installed. Groundwater analytical data collected in July 1988 indicated the presence of elevated volatile organic compounds (VOC) and semi-volatile organic compounds (SVOC). In August 1988, eight soil borings were installed and sampled for VOCs and total petroleum hydrocarbons. Only one soil sample, collected from boring B-5 installed at the formal disposal trench, indicated concentrations of VOCs in excess of the former NJDEP Residential and Non-Residential Direct Contact Soil Cleanup Criteria (SCC). Three additional on-site monitoring wells were installed in May 1990. Groundwater analytical data collected in July 1990 also indicated the presence of elevated VOCs and SVOCs.

In November 1990, the NJDEP conducted a NJPDES Compliance Evaluation Inspection at the site. The Discharge Surveillance Report stated that recent analytical data from the on-site wells indicated the presence of VOCs and SVOCs in excess of Groundwater Quality Standards

(GWQS). Two possible contaminant sources were identified on site, the northern UST field and the backfilled disposal trench. The highest groundwater contaminant concentrations were reported in wells MW-6 and MW-8, immediately downgradient of each of these AOCs. The NJDEP proceeded to direct Pyrolac to implement a Ground Water Quality Assessment program.

On January 3, 1992, on behalf of Pyrolac, CEA collected groundwater samples from each of the eight on-site groundwater monitoring wells. Analytical results indicated the presence of VOCs and SVOCs including benzene, toluene, ethylbenzene, and xylenes (BTEX), tetrachloethene (TCE), 1,1,1-trichloroethane, 1,1-dichloroethene, 1,1-dichloroethane, acetone, and methylene chloride in excess of GWQS.

On November 19, 1992 the NJDEP performed another site compliance inspection and observed a solvent odor throughout the facility, three sealed floor drains, poor interior/exterior material storage and handling practices, and an outdoor drum storage area with three leaking drums. In July 1993, the NJDEP issued a directive to Pyrolac and Ply-Gem Corporation (Ply-Gem) (reported owner of materials disposed in the disposal trench) identifying them as responsible parties of the on-site contamination. Pyrolac was directed by the NJDEP to conduct a RI to determine the nature and extent of both soil and groundwater contamination, as well as provide for site cleanup activities. Ply-Gem subsequently disputed its liability for the waste materials disposed in the disposal trench.

On November 24, 1993, Pyrolac executed an Administrative Consent Order (ACO) with the NJDEP for the cleanup of the site, with the stipulation that the ACO would not become effective unless Pyrolac could obtain financial assistance from the NJDEP Hazardous Discharge Site Remediation Fund. Efforts by Pyrolac to obtain funding failed and the case was listed by the NJDEP as awaiting publically funded cleanup.

On November 26, 1996, the USEPA Response and Prevention Branch conducted a Removal Assessment at the facility. Pyrolac had abandoned the in April 1995. The site was visually assessed from the perimeter of the property. The facility was observed to have been vandalized. Approximately 100 drums, 200 5-30 gallon containers, and 400 smaller containers were observed on site. Hazardous materials noted to be present included butyl alcohol, xylenes, isopropyl alcohol, toluene, acetone, and alkyl resin solution.

Based on the results of the November 1996 USEPA Removal Assessment, the NJDEP submitted the site to the USEPA for Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA) removal action consideration in January 1997. The CERCLA System ID No. assigned to the site is NJD001271931. In June 1997, a building fire occurred at the abandoned facility. During firefighting activities, firefighters reported the presence of a “substantial amount” of chemicals in various containers within the building. Following the fire, the USEPA initiated a Removal Action at the Pyrolac facility. Wastes that were collected and disposed off site included paint-related materials, oxidizing liquids and solids, caustic alkali liquids, hydrogen peroxide, nitrocellulose liquid, aluminum powder, and one propane gas cylinder. The Removal Action was completed in February 1998. These activities were conducted in conjunction with additional RI activities. In December 1997, a USEPA Region II Superfund Technical Assessment and Response Team (START) conducted additional sampling at the facility. The

START Team collected soil and groundwater samples to assist in developing a Hazard Ranking System (HRS) score for the facility. Groundwater samples were collected from monitoring wells MW-4, MW-5, MW-7, and MW-8. The remaining wells could not be located or sufficient sample volume could not be obtained. The groundwater samples were analyzed for VOCs and SVOCs. The START Team identified well MW-4 as a background well. Numerous contaminants in wells MW-5, MW-7, and MW-8 were detected at concentrations at least three times those detected in the background well (MW-4) indicating that an impact to groundwater had occurred.

Twenty surface soil samples and four subsurface soil samples were also collected. Eight of these samples were collected from off-site neighboring properties. As with the groundwater samples, two background soil samples were collected in order to apply the USEPA Region II three-times background rule to determine a release to soils at the site. Elevated levels of VOCs, SVOCs, and pesticides were detected in each of the intended background samples as well as in each of the on-site soil samples, preventing a background comparison and determination of whether a discharge to site soils had occurred. Numerous VOC and SVOC compounds were detected in excess of former NJDEP SCC.

Based on a review of prior RI activities, the following AOCs have been identified at the site:

- 1) Former drum storage areas
- 2) Former disposal trench
- 3) Eleven chemical underground storage tanks (USTs)
- 4) One heating oil UST
- 5) Documented soil contamination (VOCs and SVOCs)
- 6) Documented groundwater contamination (VOCs and SVOCs)

The historical RI and RA documents reviewed during this PA are included in Appendix A.

2.6 Comparison of Historical Contaminant Concentrations to Current Standards

Soil and groundwater sampling activities have been performed at the site since May 1985. The historical soil sample results are summarized in Table 1 and the historical groundwater sample results are summarized in Table 2. The locations of the historical soil samples and groundwater monitoring wells installed are shown on Figure 5. The historical soil analytical results reviewed were compared to current NJDEP Soil Remediation Standards (SRS), adopted in June 2008. Following is a summary of the historical sample results.

2.6.1 Soil Sample Results

Two soil samples were collected at the site in May 1985 by the NJDEP during a RCRA Site Inspection. One grab sample was collected from the solvent distribution room floor drain and one composite sample was collected from the area of stained soils near the rear of the site. Although the analytical results for these samples were not available for review, it was reported that the results indicated the presence of toluene, ethylbenzene, bis(2-ethylhexyl)phthalate,

chloroform, methylene chloride, and naphthalene.

During SI activities performed in July 1988, 13 soil samples were collected from the five groundwater monitoring wells and eight shallow exploratory test borings installed. These samples were installed across the site at various depths from one foot to 22 feet below surface grade. The samples were analyzed for total petroleum hydrocarbons (TPHC) and volatile organic compounds (VOC). Only total VOC concentrations were reported. Analytical results for individual VOCs were not available.

During the EPA START Investigation activities performed in December 1997, 19 surface soil samples and three subsurface soil samples were collected. The depth intervals of the subsurface soil samples were not reported. The sample locations were located both on and off site. Each of the samples was analyzed for VOCs, semi-volatile organic compounds (SVOC), pesticides, PCBs, and metals. The analytical results of the inorganic compounds were not available for review. A review of the remaining analytical data indicated numerous SVOC compounds in excess of NJDEP SRS in samples S01, S02, S07, S14, and S19. PCBs were detected in excess of NJDEP SRS in samples S09, S11, S14, and S16.

The historical soil sample contaminant concentrations detected in excess of NJDEP SRS are shown on Figure 6.

2.6.2 Groundwater Sample Results

Groundwater samples were collected from on-site groundwater monitoring wells during five sampling events performed in July 1988, July 1990, October 1990, January 1992, and December 1997. There are currently eight groundwater monitoring wells located on site, identified as MW-1 through MW-8. Wells MW-1 through MW-5 were installed in June 1988 and wells MW-6 through MW-8 were installed in May 1990. Wells MW-1, MW-2, and MW-3 were installed to depths of 15, 15, and 19 feet respectively in perched water-bearing zones. Wells MW-4 through MW-8 were installed to depths of 19 to 30 feet below surface grade in the deeper water-bearing zone on top of the bedrock surface.

Historically, with the exception of wells MW-3 and MW-4, each of the on-site wells has exhibited contaminant concentration in excess of current NJDEP Groundwater Quality Standards (GWQS). Wells MW-1 and MW-2 could not be located during the December 1997 sampling event. In addition, sufficient sample volume could not be collected from wells MW-3 and MW-6 during the December 1997 sampling event. Historically, the highest VOC contaminant concentrations have been detected in wells MW-5, MW-6, MW-7, and MW-8.

The analytical data reported for the remaining wells sampled during the December 1997 sampling event (MW-4, MW-5, MW-7, and MW-8) showed a significant decrease in contaminant concentrations from the prior groundwater sampling event performed January 1992 by as much as four orders of magnitude. Figure 7 presents the historical groundwater contaminant concentrations detected during the January 1992 groundwater sampling event.

2.7 Environmental Permit History

On January 1, 1990, the NJDEP issued Pyrolac a New Jersey Pollutant Discharge Elimination System (NJPDES) Permit (No. NJ0073563) for underground injection/USTs, and associated piping and contaminated soils. The permit was due to expire on February 1, 1995. Information regarding the renewal of this permit was not available.

The eleven USTs located at the site were listed under NJDEP UST Registration ID No. 0122438. According to NJDEP records, the USTs were listed as “In-Use” as of January 1, 1974. Additional information regarding the registration of these USTs was not available.

2.8 Current Uses of Adjacent Sites

The site is located in a mixed industrial and residential area of the Borough of Hawthorne, Passaic County. The site is bordered to the north by Nexus Plastics Corporation (a plastics manufacturer), to the west by the Erie-Lackawanna Railroad, to the east by residential properties and Passaic Avenue, and to the south by mixed residential/commercial development and Schoon Avenue.

3.0 PRELIMINARY ASSESSMENT ACTIVITIES

3.1 User-Provided Information

3.1.1 Title Records

A Title Record Search was requested by PCDED and performed by the Chicago Title Insurance Company. A copy of the title records is included as Appendix B. Following is a summary of the title records that were reviewed.

- Vulcan Lacquer and Coatings Co., Inc. by Deed from New Jersey Lacquer Company, Inc. dated February 4, 1966, recorded February 4, 1966 in the Office of the Clerk/Register of Passaic County, in Deed Book U82, Page 42.
- Mortgage Book X115, Page 146, between Vulcan Lacquer and Coatings Co., Inc. (Mortgagor/Borrower) and Independence Bank of N.J. (Mortgagee/Lender) dated April 20, 1989, recorded May 24, 1989, in the Office of the Clerk/Register of Passaic County; said mortgage re-recorded in Book H116, Page 183.
- Lis Pendens, filed January 13, 1993 as No. N51754, must be discharged of record.
- Lis Pendens, filed December 3, 1993 as No. P22924, must be discharged of record.
- Tax Sale Certificate in Mortgage Book H134, Page 38, must be cancelled of record at or prior to closing.

Additional records regarding the historical ownership of the site were obtained and reviewed. A summary of historical ownership, based on all available records, is included in Section 2.3.

3.1.2 Specialized Knowledge

Pursuant to the ASTM standard practice, it is the responsibility of the user to communicate any “specialized knowledge” or experience that is material to identifying AOCs in connection with the site to the environmental professional conducting the site assessment.

The PCDED did not report any knowledge of AOCs at the subject property to Dewberry.

3.1.3 Valuation Reduction for Environmental Issues

In a transaction involving the purchase or lease of a parcel of commercial real estate, if the user has actual knowledge that the purchase/lease price of the site is significantly less than the purchase/lease price of comparable properties, it is required under the ASTM standard practice to provide this information to the environmental professional conducting the assessment. The reason for the reduced purchase or lease rate could be due to AOCs at the site.

The scope of this report did not include a property price review.

3.1.4 Owner, Site Representative, and Occupant Provided Information

The site is owned by Pyrolac. The Borough of Hawthorne placed a lien on the property due to unpaid property taxes in December 1992. Representatives from Pyrolac were not available for interview purposes. The historical environmental reports prepared for Pyrolac were obtained during a review of NJDEP files on July 20, 2007.

3.2 Records Review and Site Reconnaissance

Dewberry obtained information from Federal, state and local environmental records identifying sites with recorded environmental activities from EDR of Milford, Connecticut. EDR conducted a computer search of USEPA and NJDEP records for sites with recorded environmental activities within a maximum one-mile radius of the subject property. Dewberry has reviewed EDR’s report and compiled a summary of its findings. The summary also includes additional data, related to the subject property, which was obtained from local regulatory agencies. Appendix C contains a copy of the EDR Radius Map with GeoCheck Report.

3.2.1 EDR Database Records

EDR searched the following Federal environmental record sources at the approximate radial search distances noted, as required by ASTM E 1527-05, Section 8.2.1.

Database	ASTM Search Radius (miles)	Number of Sites within Search Radius
National Priority List (NPL)	1.0	1
Proposed National Priority List (Proposed NPL)	1.0	0
National Priority List Deletions (Delisted NPL)	1.0	0
National Priority List Liens (NPL Liens)	Target Property Only	0

Database	ASTM Search Radius (miles)	Number of Sites within Search Radius
Comprehensive Environmental Response, Compensation, and Liability Information System (CERCLIS)	0.5	1
CERCLIS-No Further Remedial Action Planned (CERC-NFRAP)	0.5	3
LIENS 2	Target Property Only	0
Corrective Action Report (CORRACTS)	1.0	4
Resource Conservation and Recovery Act Information – Treat, Store, or Dispose (RCRA TSDF)	0.5	1
RCRA Large Quantity Generators (RCRA-LQG)	0.25	0
RCRA Small Quantity Generators (RCRA-SQG)	0.25	0
RCRA Conditionally Exempt Small Quantity Generators (RCRA-CESQG)	0.25	2
RCRA Non-Generators (RCRA-NonGen)	0.25	9
Engineering Controls Site List (US ENG CONTROLS)	0.5	0
Sites With Institutional Controls (US INST CONTROL)	0.5	0
Emergency Response Notification System (ERNS)	Target Property Only	0
Hazardous Materials Information Reporting System (HMIRS)	Target Property Only	0
Incident and Accident Date (DOT OPS)	Target Property Only	0
Department of Defense Sites (DOD)	1.0	0
Formerly Used Defense Sites (FUDS)	1.0	0
Listing of Brownfields Sites (US BROWNFIELDS)	0.5	0
Superfund (CERCLA) Consent Decrees (CONSENT)	1.0	0
Records of Decision (ROD)	1.0	1
Uranium Mill Tailings Sites (UMTRA)	0.5	0
Open Dump Inventory (ODI)	0.5	0

New Jersey Spills (NJ Spills)	Target Property Only	0
Registry of Engineering Controls (ENG CONTROLS)	0.5	1
Database	Search Radius (miles)	Number of Sites within Search Radius
Registry of Institutional Controls (INST CONTROL)	0.5	2
Voluntary Cleanup Program (VCP)	0.5	9
Registered Drycleaners (DRYCLEANERS)	0.25	0
Brownfields Site List (BROWNFIELDS)	0.5	10
ISRA Database (ISRA)	0.5	14
New jersey Pollutant Discharge Elimination System (NJPDES)	Target Property Only	0
Site Re-Evaluation Report (HWS RE-EVAL)	1.0	7

EDR searched the following tribal record sources at the approximate radial search distances noted.

Database	Search Radius (miles)	Number of Sites within Search Radius
Indian Reservations (INDIAN RESERV)	1.0	0
Indian Open Dumps Information (INDIAN ODI)	0.5	0
Leaking Underground Storage Tanks on Indian Land (INDIAN LUST)	0.5	0
Underground Storage Tanks on Indian Land (INDIAN UST)	0.25	0

EDR also searched its proprietary environmental record sources at the approximate radial search distances noted.

Database	Search Radius (miles)	Number of Sites within Search Radius
Manufactured Gas Plants	1.0	0
EDR Historic Gas Stations	0.25	3
EDR Historic Cleaners	0.25	2

3.2.2 Subject Property

The site was listed in the NJ Release, ICIS, HIST FTTS, HWS RE-EVAL, FINDS, FTTS, CERCLIS, RCRA-TSDF, UST, NJPDES, and RCRA-NonGen, databases. A description of each listing follows.

NJ Release Database

The site was listed in the NJ Release Database under NJDEP Case No. 97-06-11-1613-21 due to a brush fire in an abandoned building housing unknown materials. The fire was reported on June 11, 1997. Other historical documents indicated that the fire was extinguished by the Hawthorne Fire Department. Follow-up site security activities were also handled by the Hawthorne Fire Department.

ICIS Database

The site was listed in the ICIS Database under Enforcement Action ID No. 02-1997-0351. No other relevant information regarding this listing was reported.

HIST FTTS Database

The site was listed in the HIST FTTS Database under Inspection No.1990091219801 due to an EPCRA Federally Conducted Enforcement Action. No other relevant information regarding this listing was reported.

HWS RE-EVAL Database

The site was listed in the HWS RE-EVAL Database under PI No. 012243. No other relevant information regarding this listing was reported.

FINDS and FTTS Databases

The site was listed in the FINDS and FTTS Databases following a Complaint Issue Date of August 30, 1991. The complaint was due to a failure/non-reporting action to the USEPA. No other relevant information regarding this listing was reported.

CERCLIS Database

The site was listed in the CERCLIS Database under Site ID No. 0204080 due past USEPA involvement in the remedial investigation of the subject site. USEPA's involvement at the subject site is summarized in Section 2.5 of this report. A detailed summary of USEPA's remedial inspection and remedial action activities (with dates) is included on Pages 11 and 12 of the EDR Report included, in Appendix C.

RCRA TSD and RCRA NonGen Databases

The site is listed in the RCRA TSD and RCRA NonGen Databases due to past waste disposal activities performed on site. Past documented waste disposal activities performed on site are summarized in Section 2.5 of this report.

UST Database

The site is listed in the UST Database under Facility ID No. 012243 due to the presence of 11 USTs currently located at the site. A summary of the former contents of these USTs and their current status is included in Section 2.4.1 of this report.

NJPDES Database

The site was listed in the NJPDES database under Permit No. NJ0073563 due to groundwater contamination identified beneath the site. A summary of historical groundwater investigation activities performed at the site is included in Section 2.5 of this report.

3.2.3 Surrounding Properties

The following sections describe sites in the surrounding area that were identified within the above noted search radii. The information provided lists only databases of concern that would identify conditions that may pose an environmental risk to the subject property.

National Priority List (NPL)

This database contains information on sites identified for priority cleanup under the Superfund program. One property (the Fair Lawn Well field) was identified within the 1.0 mile search radius. Based on the property's location and distance from the site, the property does not pose an environmental risk to the site.

CERCLIS Database

This database contains data on potentially hazardous waste sites that have been reported to the USEPA. One property (identified as Hawthorne Municipal Wells) was identified within the 0.5 mile search radius. The property was reported to be under a private party-led cleanup. Based on the property's location and distance from the site, the property does not pose an environmental risk to the site.

State Hazardous Waste Sites (SHWS)

This database contains information about known contaminated sites in New Jersey. Forty-two properties were identified in this database within the one-mile search radius. Of these sites, six sites were located at lower elevations than the subject site and do not pose an environmental risk to the site. The remaining 36 properties were located at a higher elevation, but at a distance greater than one quarter of a mile from the site. Based on their location and distance from the site, these properties also do not pose an environmental risk to the site.

Leaking Underground Storage Tanks (LUST)

This database contains information about historical leaking underground storage tanks. Nine LUST properties were identified within the 0.5-mile search radius. Of these properties, only two were located within one eighth of a mile from the site: the Mobil Service Station located at 2 Wagaraw Road and the Sunoco Service Station located at 415 Wagaraw Road. Active remediation and cleanup activities were reported at both properties. Based on their location and distance from the site, the remaining properties do not pose an environmental risk to the site.

Industrial Site Remediation Act (ISRA)

This database contains information about properties that have had reported activity regulated under the Industrial Site Remediation Act (ISRA). Fourteen ISRA properties were listed within the 0.5 mile search radius. Of these properties, one property, Jet Precision Metal, is located adjacent to the south of the site. A letter of No Further Action (NFA) was issued by the NJDEP for Jet-Precision Metal. Based on their location and distance to the site, the remaining properties do not pose an environmental risk to the site.

Unmapped “Orphan” Sites

EDR listed 39 regulated/reported environmental sites that could not be mapped, due to poor or inadequate address information. These sites are known as “orphan” sites. After a review of the EDR orphan site list, it appears that the orphan listings are not located within close proximity to the subject site and do not likely pose an environmental risk to the property.

3.2.4 Additional Regulatory Agency Files

Several other regulatory agencies were contacted by Dewberry concerning environmental issues that may pertain to the site. No formal interviews were conducted. Each agency is listed below, with a summary of the information obtained from these organizations.

Federal/State

USEPA EnviroFacts

Dewberry searched the USEPA EnviroFacts Toxic Release Inventory (TRI) database for information that may pertain to the environmental condition of the site. Information reported on the site included various regulatory and enforcement actions. The information reviewed is discussed in Section 2.5 of this report.

NJDEP Regulatory Files

Dewberry submitted an Open Public Records Act (OPRA) request to the NJDEP. Following the

submittal of this request, Dewberry performed a review of available NJDEP case files on July 20, 2007. Information contained within these files is discussed in Section 2.5 of this report.

Local

Dewberry submitted an Open Public Records Act (OPRA) request to the Borough of Hawthorne municipal offices. Files obtained from Hawthorne are discussed in Section 2.5 of this report.

3.2.5 Environmental Liens or Activity and Use Limitations

The ASTM standard practice specifies that the user of the environmental assessment complete a review of reasonably obtainable lien records or activity and use limitations associated with the site. This information should then be provided to the environmental professional. Typically, this is accomplished through use of a title search company. These limitations indicate that a property may not be acceptable for unrestricted use due to residual levels of hazardous substances or petroleum compounds at the site.

An environmental lien search was performed by EDR. No environmental liens were found on the site. The current title holder was listed as Vulcan Lacquer and Coatings Co., Inc., Pyrolac's predecessor. A detailed listing of property owners and operators of the site is included in Section 2.3. A copy of the Environmental Lien Report obtained from EDR is included as Appendix D.

3.2.6 Sanborn Fire Insurance Maps

Dewberry reviewed Sanborn Fire Insurance Maps provided by EDR for the years 1922, 1950, 1951, and 1971. Copies of the Sanborn maps are included in Appendix E. The following is a discussion of the observations made per map pertaining to the site and surrounding area.

1922 Map

The site is shown undeveloped in the 1922 map. No commercial development is shown in the vicinity of the site. Light residential development is shown east of the site, along Passaic Avenue. The Erie-Lackawanna Railroad is shown developed adjacent to the west of the site.

1950 Map

The main facility building is shown developed at the site which is labeled as "Pyrolac Corporation". Also shown is a storage shed to the east, which was most recently used by Pyrolac as a nitrocellulose storage shed. Light industrial development is shown south of the site and further residential development is shown east of the site along Passaic Avenue.

1951 Map

No significant changes were noted on the 1951 map from the 1950 map.

1971 Map

Further development is shown at the site. The facility structures appear as they are today with the exception of the Drum Storage Building which was not yet present. The property adjacent to the north, currently developed and occupied by the Nexus Plastics Corporation, is shown undeveloped. A mix of commercial/residential development is shown adjacent to the south of

the site, along Schoon Avenue and Vincent Avenue. Areas further to the east, north, and west are shown primarily with residential development.

3.2.7 Historical Topographic Maps

Dewberry reviewed historical topographic maps provided by EDR for the years 1900, 1903, 1905, 1944, 1955, 1970, 1981, and 1995. Copies of the historical topographic maps are included in Appendix F. Following is a discussion of the observations made on each map pertaining to the site and surrounding area.

1900, 1903, and 1905 Maps

The 1900, 1903, and 1905 maps were provided at small scales. Site-specific development could not be identified.

1944 Map

The site is shown undeveloped. One small structure is shown developed adjacent to the south of the site on Schoon Avenue. The Erie-Lackawanna Railroad is shown adjacent to the west of the site.

1955 Map

No significant changes were noted on the 1955 map from the 1944 map.

1970 Map

The 1970 map shows a single structure developed on the property adjacent to the north, currently occupied by Nexus Plastics Corporation. The site is shown at an approximate elevation of 50 feet above msl. No other significant changes were noted on the 1970 map from the 1955 map.

1981 Map

No significant changes were noted on the 1981 map from the 1970 map.

1995 Map

No significant changes were noted on the 1995 map from the 1981 map.

3.2.8 Historical Aerial Photographs

Dewberry obtained historical aerial photographs of the site from EDR for the years 1954, 1966, 1976, 1984, 1995, and 2006. Copies of the historical aerial photographs are included in Appendix G. Following is a discussion of the observations made on each photograph pertaining to the site and surrounding area.

1954 Photograph

Numerous structures were shown developed at the site. Heavy residential development was shown in areas surrounding the site. The Erie Lackawanna Railroad is shown to the west and the Passaic River is shown approximately one quarter of a mile south of the site.

1966 Photograph

No significant changes were noted in the 1966 aerial photograph from the 1954 photograph.

1976 Photograph

The Nexus Plastics Corporation Facility was shown developed adjacent to the north of the site. No other significant changes were noted in the 1976 photograph from the 1966 photograph.

1984 Photograph

No significant changes were noted in the 1984 photograph from the 1976 photograph.

1995 Photograph

No significant changes were noted in the 1995 photograph from the 1984 photograph.

2006 Photograph

Structures are shown developed on the subject site; however, due to heavy tree cover, a majority of the structures currently present at the site could not be identified. The Nexus Plastics Corporation facility, currently developed adjacent to the north of the site is shown. Heavy residential development is shown to the east, north, and west. A mix of residential/commercial development is shown to the south of the site.

3.2.9 City Directory

Dewberry obtained a copy of historical City Directory reports from EDR. A copy of the City Directory Report is included in Appendix H. The following is a discussion of the information obtained from the City Directory Report.

Subject Property

The subject property (55 Schoon Avenue) was not listed in the published City Directories for the years 1920, 1922, 1926, 1927, 1930, 1932, 1937, 1942, 1946, 1947, and 1950. Pyrolac (the former site owner/operator) was listed as the property owner in the City Directories for the years 1952, 1956, 1961, and 1976. In addition to the Pyrolac listings, Flexcraft Industries was listed at 55 Schoon Avenue on the 1985 City Directory published by the New Jersey Bell Telephone Company. Historical documents reviewed by Dewberry indicate that Pyrolac was the only owner/operator at the site until it was abandoned in April 1995. No other information regarding the presence of Flexcraft Industries was discovered during the subject PA.

Surrounding Properties

Numerous residential and commercial property owners were reported surrounding the site in the City Directories from 1927 to 2003. The commercial development currently located immediately adjacent to the south of the site at 40 Schoon Avenue was identified as Vandereems Manufacturing Company by New Jersey Bell Telephone.

3.2.10 Site Reconnaissance

On August 11, 2009, Dewberry performed a reconnaissance of the site. The purpose of the site reconnaissance was to visually assess specific environmental criteria as they pertain to the site.

Photographs of the property taken during the site reconnaissance are included in Appendix I. Typically, the following environmental criteria are considered during the site reconnaissance:

- Hazardous and Petroleum Products and Containers
- Aboveground Storage Tanks
- Underground Storage Tanks
- Odors
- Pools of Liquid
- Drums
- Unidentified Substance Containers
- Facility Heating and Cooling
- Stains or Erosion
- Drains and Sumps
- Non-Indigenous Fill Materials
- Pits, Ponds, and Lagoons
- Polychlorinated Biphenyl (PCB)-Containing Electrical or Hydraulic Equipment
- Stained Soil or Pavement
- Stressed Vegetation
- Solid Waste
- Waste Water
- Wells
- Septic Systems

A site plan showing the subject property and immediate adjacent sites surrounding area is included as Figure 4. Dewberry began the site reconnaissance with an exterior walkthrough of the site in an effort to locate, access, and inspect each of the existing groundwater monitoring wells at the site. Each of the eight wells (MW-1 through MW-8) was found, opened, gauged for well depth, depth to groundwater, and the presence of product. Wells MW-1 through MW-7 were constructed with above grade casing while well MW-8 was constructed with an at-grade, flush-mount manhole. The following table summarizes the installation depth, measured well depth and depth to water (from top of casing).

Well ID	Install. Depth (ft)	Measured Well Depth (ft)	Headspace (ppm)	Depth to Water (ft)
MW-1	15	11.17	0.0	Dry
MW-2	15	10.4	0.0	9.98
MW-3	(19-30)*	21.09	0.0	14.85
MW-4	(19-30)*	11.68	0.0	11.18
MW-5	(19-30)*	23	0.0	8.45
MW-6	(19-30)*	24.13	0.0	11.46
MW-7	(19-30)*	23.21	0.0	9.32
MW-8	(19-30)*	10.31	0.0	Dry

*Historical data reviewed only indicated a range of depths for these wells.

Although each of the wells inspected appeared to be in structurally sound condition, each of the measured depths was less than the installed well depths indicating potential damage and/or silting.

Dewberry inspected the interior of the site structures following the monitoring well assessment activities. Each of the buildings/production areas shown on Figure 4 were inspected including the nitrocellulose storage building, the solvent storage canopy, the drum storage building, the

solvent room, the production room, the color matching room, the loading dock, the stock production room, the fire room, boiler room, Research and Development (R&D) room, Quality Assurance/Quality Control (QA/QC) room, and office area. These areas were observed to be partially open to the environment with varying amounts of water damage. Evidence of the prior fire reported in the office area in June 1997 was observed. Due to the varying amounts of standing water and debris throughout the buildings inspected, the integrity of the concrete floor within the buildings could not be fully assessed. The floor drains reported in the solvent room and production room were observed to have been filled with concrete. No former production or waste materials associated with the prior manufacturing operations conducted at the property were observed during the site reconnaissance.

Dewberry inspected the exterior of the property following completion of the building interior assessment activities. Overall, the exterior of the site was overgrown with vegetation making a complete assessment of the property exterior difficult. Although previously reported AOCs were identified (including the former disposal trench, chemical UST storage area, and heating oil UST), no soil staining was observed due to the level of overgrowth. No additional AOCs were identified during the exterior property assessment.

3.3 Summary of Findings

Based a review of historical documents, recent aerial photography, and a site reconnaissance, structures remaining on site include a former manufacturing facility, drum storage building, solvent storage canopy, office area, and a concrete block storage shed. Also still present on site are 11 USTs previously used to store bulk materials used in the production processes performed at the site and one heating oil UST used to store fuel to heat the office area. Although the USTs were reported to have been pumped out during an EPA response action in 1997, their current status and integrity could not be determined during the subject assessment. Prior SI activities at the site have identified both VOC and SVOC contaminant levels in both soil and groundwater at concentrations in excess of NJDEP SRS and GWQS. The following AOCs were previously identified at the site and confirmed (where possible) during the site reconnaissance activities:

- 1) Former drum storage areas
- 2) Former disposal trench
- 3) Eleven chemical underground storage tanks (USTs)
- 4) One heating oil UST
- 5) Documented soil contamination (VOCs and SVOCs)
- 6) Documented groundwater contamination (VOCs and SVOCs)

Dewberry also performed a reconnaissance of the site in August 2009. The site is surrounded by a locked chain-link fence. The perimeter of the property is overgrown by trees, weeds and other foliage to the point that the interior of the site is not visible from the fence line. The building interiors were observed to be partially open to the environment with standing water and debris observed throughout the building interiors. The standing water and debris within the buildings prevented a thorough inspection of the concrete floor within the facility structures. Two concrete-filled floor drains were observed in the solvent room and production room. The structural integrity of the floor drains could not be determined during the PA. The unknown

structural integrity of the concrete flooring within the facility buildings and the concrete filled floor drains are considered to be another AOCs requiring further investigation.

The exterior of the site was overgrown with vegetation making it difficult to perform a complete assessment of the property's exterior. No soil staining or stressed vegetation was observed due to the level of overgrowth.

4.0 CONCLUSIONS AND RECOMMENDATIONS

The following AOCs were identified at the site during the PA:

- 1) Former drum storage areas (previously identified)
- 2) Former disposal trench (previously identified)
- 3) Eleven chemical USTs (previously identified)
- 4) One heating oil UST (previously identified)
- 5) Documented VOC and SVOC soil contamination (previously identified)
- 6) Documented VOC and SVOC groundwater contamination (previously identified)
- 7) Floor drains and integrity of flooring within site structures (newly identified during the subject PA)

The locations of the above AOCs are shown on Figure 8. Based on the PA results, Dewberry recommends that a SI be performed on the property per the requirements of N.J.A.C. 7:26E. The SI will focus on the AOCs identified during the prior SI activities and the subject PA and will involve both soil and groundwater sampling to confirm the presence, type, and level of contamination on the property. The soil sampling activities will include surface and subsurface soil sampling within the AOCs. The groundwater sampling activities will include the refurbishment of the existing monitoring wells (surge-block and development) and collection of groundwater samples.

5.0 ENVIRONMENTAL PROFESSIONAL CERTIFICATION

We (the undersigned) declare that to the best of our professional knowledge and belief, we meet the definition of Environmental Professional as defined within Section 312.10 of 40 CFR 312. We have specific qualifications based on education, training, and experience, to appropriately assess the site of the nature, history and setting of the site. We have developed and performed the all appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312.

Tasks associated with this site assessment such as record reviews, site reconnaissance, and site interviews were performed directly by one of us. In performing data review and developing interpretations and recommendations, we have assumed that data obtained from readily available public sources is accurate.

Corey S. Nachshen
Environmental Engineer

Charles L. Stebbins, C.P.G., C.H.M.M.
Project Manager

TABLES

**Table 1
Summary of Historical Soil Sample Analytical Data**

**Former Pyrolac Corporation Facility
55 Schoon Avenue
Hawthorne, Passaic County, New Jersey**

May 1985 NJDEP RCRA Site Inspection

Sample 1 - Grab sample from solvent distribution room floor drain
Sample 2 - Composite sample from areas of stained soils near rear of property

** Analytical results reportedly indicated the presence of toluene, ethylbenzene, bis(2-ethylhexyl)phthalate, chloroform, methylene chloride, and naphthalene. No data regarding individual contaminant concentrations was available.

July 1988 Remedial Investigation Sampling

Re: Remedial Investigation Report: Groundwater and
Soil Contamination Investigation
Pyrolac, Corp.
Schoon Ave., Hawthorne, New Jersey

Gentlemen:

We have completed the groundwater and soil contamination investigation at the subject site. This work was performed as outlined in our September 30, 1987 Draft Remedial Work Plan and as per revisions to this Plan, described in a letter dated February 23, 1988. Various correspondence from the New Jersey Department of Environmental Protection (NJDEP) which have resulted in modifications to our Plan and which are otherwise germane to this project include:

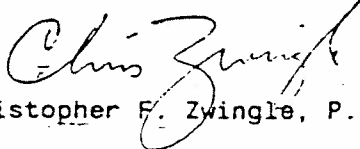

1. The original August 10, 1988 Directive with the Remedial Investigation Scope of Work;
2. The January 25, 1988 letter modifying our September 30, 1987 Work Plan;
3. The April 4, 1988 final letter regarding the Work Plan.

Following is a description of the work we performed on-site along with our evaluation and recommendations.

Should you have any questions, please do not hesitate to contact us.

Very truly yours,

SESI Consulting Engineers,

Christopher F. Zwingle, P.E.

CFZ

Ref. 8

SOIL AND GEOLOGIC CONDITIONS

We performed 5 exploratory test borings throughout the site for the purposes of installing groundwater monitoring wells. These 5 borings were drilled, using hollow stem augers, to depths between 15.0 and 35.0 ft. In addition, we performed 8 shallower borings throughout the site to depths between 2 and 8 ft. for the purposes of obtaining soil samples in select areas. Refer to Appendix A where the monitoring well logs are included. The logs of the shallow borings are included in Table III. All of the well and boring locations are depicted on Figure 1, the Monitoring Well and Boring Location Plan, attached.

Published soils and geologic literature indicates the site soils consist of glacial deposits of the recent Wisconsin glacial period, overlying the Brunswick Shale Formation. The soil/geologic conditions on this site, at the locations tested, consist of 25 ft. to greater than 35 ± ft. of soil overlying the Brunswick Shale Formation.

A layer of fill mantles the site and varies in thickness from 1.0 to 7.0 ft. Beneath the fill layer and extending to bedrock is glacial stratified drift and glacial till. These soils are highly variable throughout the site, consisting of variable amounts of sand, silt and clayey silt. Refer to Figure 2, a geologic profile through the site, and to the boring/well logs for details regarding the soil conditions.

GROUNDWATER CONDITIONS

General

Groundwater exists on this Site above the bedrock formation in only limited quantities. Since the site soils are very silty and clayey and have low permeability, the site groundwater system should be classified as an aquiclude, not an aquifer.

At the locations of Wells 1, 2 and 3, we encountered an upper groundwater zone which is "perched" above a low permeability clayey silt soil stratum. The soils immediately below this clayey silt stratum are not 100 percent saturated. As groundwater slowly percolates vertically downward through the clayey silt stratum, it dissipates quickly when it enters the more permeable sandier soils below. The origin of this "perched" groundwater is stormwater infiltration and normal groundwater from off-site areas.

Wells 1, 2 and 3 are shallow wells, 15 to 19 ft. in depth, and are screened only within this "perched" water bearing zone. The purpose of these wells is to determine if the site activities have caused groundwater contamination. Contamination would likely have originated at or near the surface and accumulated in the upper "perched" zone prior to seeping into the lower groundwater zone.

The lower water bearing zone overlies the bedrock surface. Wells 4 and 5 are screened through the lower groundwater zone. During the drilling of Well 4, saturated soil was encountered at a depth of 10 ft. but the static level of water in the well is near 26 ft. which indicates a "perched" groundwater zone exists here also. However, no low permeability soil strata were encountered so we screened the well deep. During the drilling of well 5 there was no indication that an upper "perched" groundwater zone existed. The water levels in these 2 wells is on the order of 15 ft. below the water levels measured in the shallow wells.

Flow Direction

Water level readings in the wells cannot be utilized to determine the flow direction of the upper or lower groundwater zones, as is normal practice. In the upper groundwater zone, a strong downward vertical component of flow through the confining stratum exists which affects the water levels in the wells. In the lower groundwater zone, only 2 wells were constructed; 3 wells are required to define the surface of the water table. For these reasons, groundwater flow directions for both the upper and lower groundwater zones must be based on the soil and geologic conditions as well as the topographic setting of the site.

Generally, the flow direction of the upper "perched" groundwater zone is lateral towards the south. This is based on the elevation of the top of the underlying low permeability soil stratum encountered during drilling. As indicated above, the upper groundwater zone also has a downward flow component, since the soils beneath the clayey silt stratum are not 100 percent saturated. The thickness of this "perched" water bearing zone is small; on the order of a few feet.

The primary flow direction of the lower groundwater zone is likely along the slope of the bedrock surface which is towards the south. The location of the site, topographically upgradient and a short distance from the Passaic River, would also indicate that groundwater is flowing south towards the Passaic River. It is our experience, based on similar projects involving the Brunswick Formation, that the lower groundwater zone also has a downward flow component; this is how the Brunswick shale aquifer is recharged.

Permeability

The permeability of both water bearing zones is small; on the order of 10⁻⁵ to 10⁻⁶ cm/sec. During sampling the wells, all of the wells bailed dry and took several hours to recharge before a sample could be obtained.

GROUNDWATER AND SOIL SAMPLING AND TESTING

Groundwater

On July 15, 1988 we obtained groundwater samples from 4 of the wells (and a trip and field blank of distilled water) for laboratory analyses. At that time, Well-3 was found to be dry. We waited until after a period of wet weather and obtained a sample from Well-3 (and a field blank of distilled water) on July 22, 1988. As a result, the sample from Well-3 may be slightly dilute. Samples were obtained using dedicated PVC bailers and in accordance with the QA/QC Plan outlined in our original Work Plan.

Samples were analyzed for volatile organics (plus 15), base/neutrals (plus 15) and total petroleum hydrocarbons. The results are listed in Table 1. Also listed are the NJDEP- ECRA guideline action levels which are often used, on an informal basis, to determine site clean-up requirements. The laboratory results are included in Appendix C; the laboratory QA/QC data is not attached but we will supply it at your request. The levels of volatile organics in all of the wells were above the NJDEP- ECRA guideline level of 10 parts per billion (ppb) and Well-5 yielded a significantly elevated concentration of 1988 ppb.

Wells 1,3 and 5 yielded levels of base/neutral compounds which were above the NJDEP- ECRA guideline level of 50 ppb.

Finally, only Well-3 yielded levels of petroleum hydrocarbons (4 parts per million, ppm) above the NJDEP- ECRA guideline level of 1 ppm.

Soil

We obtained 13 soil samples (and 4 field blanks and 1 trip blank) from the 5 monitoring well borings and the 8 shallow exploratory test borings. Samples were analyzed for volatile organics (plus 15) and total petroleum hydrocarbons. The results are listed in Table II along with the NJDEP- ECRA guidelines for soil. The laboratory results are included in Appendix C; the laboratory QA/QC data is not attached but we will supply it at your request.

Only the soil sample from Boring-5 yielded levels of volatile organics (2,598 ppb) above the NJDEP- ECRA guideline of 1,000 ppb. None of the soil samples yielded levels of petroleum hydrocarbons above the NJDEP- ECRA guideline of 100 ppm.

EVALUATION

Some soil and groundwater contamination exists on this site. We have correlated the various possible contaminant sources with the types, levels and locations of contaminants found. Following are six possible sources which could account for the contamination difficulty:

1. The 11 underground chemical storage tanks at the north end of the site;
2. The old disposal trench near Borings 5 and 8;
3. The floor drain system which is now sealed;

4. The underground heating oil tank at the south end of the buildings;
5. The general storage of chemical drums throughout the site.
6. The migration of contaminants on-site from an off-site source through the groundwater system.

The levels of volatile and base/neutral compounds in Wells 1 and 3 may possibly be due to the underground chemical storage tanks since they are approximately hydrologically downgradient of the tanks. Alternately, the contamination in these 2 wells could be attributed to the previous storage of drums in the north and western portions of the site.

Wells 2 and 4 are downgradient and/or sidegradient of the underground chemical storage tanks and they are fairly clean. Therefore, these wells define the outer limits of groundwater contamination which may have resulted from the tanks.

Well 3 contains higher levels of base/neutral compounds than Well 1 and it is located very close to the underground heating oil tank. Therefore, this may be an indication that this tank has leaked; heating oil contains the heavier fraction of petroleum hydrocarbons which includes base/neutral compounds.

The old disposal trench is likely a problem area as shown by the high levels of contamination in the soil sample from Boring 5. Well 5 is hydrologically downgradient of this old trench area and it is the most contaminated well. This would suggest that the source of contamination in Well 5 is the old trench area. We do not know why, however, the soil sample from Boring 8, which is very near Boring 5, is relatively clean.

Well 4 lies between the underground chemical storage tanks and Well 5 and it is relatively clean. This would also indicate that the source of contamination in Well 5 is not the underground chemical storage tanks, but rather, the old trench area.

RECOMMENDATIONS

Contamination remediation on this site should only consist of contaminated soil excavation and removal (and replacement, if necessary) of the underground tanks. Groundwater remediation would be technically impractical and prohibitively expensive. The low permeability of the site soils would make any kind of groundwater recovery scheme (by pumping) difficult if not impossible.

The soils on this site have low permeability and, in addition, distinct confining layers exist. These soils have helped to minimize the migration of any chemical spills which may have occurred. However, it is apparent that some migration has occurred by the high contaminant levels in Well 5.

We recommend the underground heating oil tank should be leak tested. Also, additional sampling should be performed in the area of the old disposal trench to determine the vertical and lateral limits of contamination. Excavation of contaminated soils may be necessary.

SUMMARY - EXPLORATORY BORING LOGS

BORING 1

0 to 3.0 ft FILL: Brown Sand, Silt, Gravel
3.0 to 6.0 ft Tan medium to fine SAND, some Silt

No groundwater encountered on 6-30-88

BORING 2

0 to 1.0 ft FILL: Brown Sand, Silt, Gravel, asphalt
1.0 to 7.0 ft Brown medium to fine SAND, little Silt
7.0 to 8.0 ft Brown Clayey SILT, some medium to fine Sand

Groundwater at 7.5 feet on 7-1-88

BORING 3

0 to 1.0 ft FILL: Asphalt, stone
1.0 to 2.0 ft Brown medium to fine SAND, trace Silt

BORING 4

0 to 2.0 ft FILL: Asphalt, stone
2.0 to 6.0 ft Brown medium to fine SAND, little Silt

Groundwater at 5.5 feet on 7-1-88

BORING 5

0 to 3.0 ft FILL: Brown/black Sand, Silt, Gravel
3.0 to 8.0 ft Brown medium to fine SAND, little Silt

Groundwater at 7.0 feet on 6-30-88

BORING 6

0 to 1.0 ft FILL: Sand, Silt, Gravel
1.0 to 5.0 ft Brown medium to fine SAND, little Silt
5.0 to 6.0 ft Brown medium to fine SAND, some Clayey Silt

Groundwater at 5.5 feet on 7-1-88

BORING 7

0 to 6.0 ft FILL: Brown Sand, Silt, Gravel
6.0 to 8.0 ft Brown coarse to fine SAND, trace Silt

No groundwater encountered on 6-30-88

BORING 8

0 to 1.0 ft FILL: Brown Sand, Silt, Gravel
1.0 to 5.0 ft Brown medium to fine SAND, little Silt
5.0 to 7.0 ft Brown/gray Clayey SILT, and coarse to fine Sand

Groundwater at 6.5 feet on 7-1-88

CERTIFIED MAIL
RETURN RECEIPT REQUESTED

Mr. Steve Dulberg
Mr. Mark Dulberg
Pyrolac Corporation
55 Schoon Avenue
Hawthorne, NJ 07506

Dear Permittee:

Re: Pyrolac Corporation
NJPDES Permit No. NJ0073563
Hawthorne, Passaic County

The Department of Environmental Protection (hereinafter "the Department") has determined that Pyrolac Corporation has exceeded State ground-water quality criteria. This determination is based upon the results of ground-water analyses obtained from the facility's monitoring wells, as required by Pyrolac's New Jersey Pollutant Discharge Elimination System (NJPDES) permit. The pollutants found in the ground water of immediate concern include:

- Benzene
- Chlorobenzene
- 1,1-Dichloroethene
- 1,1-Dichloroethane
- Ethylbenzene
- Methylene Chloride
- Tetrachloroethylene
- Toluene
- 1,1,1-Trichloroethane
- Trichloroethylene
- 1,2-Trans-Dichloroethylene
- Total Xylenes
- 2-Methyl Phenol
- 4-Methyl Phenol

Therefore, within 60 days of receipt of this notification, Pyrolac Corporation shall submit to the Department for approval a proposal for implementing a Ground Water Quality Assessment program. This investigation work plan shall satisfy the requirements of N.J.A.C. 7:14A-6.15 and include the following

Ref. 15

additional requirements:

1. Identify the source areas on site.
2. Construct two ground water contour maps using previously collected water elevations from monitoring wells.
3. Construct two isopleth maps one for each round of ground water samples collected (7/90 & 10/90).
4. Determine the horizontal and vertical extent of contamination at the site. This may require the proposal of additional monitoring wells to be installed. The definition of off site contamination shall be addressed.
5. Submit a proposal to the Bureau of Underground Storage Tanks, at (609) 984-3156, for the closure of any underground storage tanks on site prior to the start of any work.

Within 30 days of receipt of written notification from the Department, the facility shall implement the approved assessment program. The facility shall complete the approved assessment program no later than 180 days from its approval date. Upon completion of the assessment program, the facility shall submit a written report of its findings to the Department for review.

The permittee should be aware that the conditions of the permit remain in full force and effect until a modification to the final permit is issued. However, the Department will suspend the quarterly sampling requirements of the permit until the assessment program has been received and approved. The Department reserves the right to require the re-institution of the sampling schedule at any time.

The facility shall not deviate from the approved work plan without specific instructions and/or approval from the Department. The procedures are required to be implemented and managed by a qualified geohydrologic consultant and/or contractor retained by the facility. The Department will review the results of the assessment program and determine the need for further corrective action measures. The initiation of this ground water quality assessment program shall change the status of the existing NJPDES permit from detection to compliance monitoring for the purpose of billing, as per N.J.A.C. 7:14A-1.8. Failure to submit the above assessment plan, within the specified time frame, will result in this matter being referred to the Division of Water Resources, Enforcement Element for appropriate action.

If you have any questions regarding this matter, please contact Ward Ingersoll, of the Bureau of Ground Water Discharge Control at (609) 292-0424.

Sincerely,

Re: Pyrolac Corporation
NJDES Permit No. NJ0073563

Dear Ms. Kuserk:

Your letter of December 3, 1991 agreed, with certain modifications, with the Ground Water Quality Assessment Proposal (GWQAP) submitted by Carpenter Environmental Associates, Inc. (CEA) on behalf of Pyrolac Corporation on October 11, 1991. Task 1 of the GWQAP called for sampling of the 8 existing monitor wells and analysis of samples for volatile organic compounds (VOCs) by EPA Method 624. Task 3 included construction of ground water contour maps from the 7/90, 10/90 and Task 1 sampling events, construction of three isopleth maps from the 7/90, 10/90 and Task 1 sampling events, and the submission of a letter report to you which outlines the findings of the Task 1 sampling event and incorporates the contour and isopleth maps. This letter satisfies that reporting requirement.

Ground Water Sampling

On January 3, 1992, CEA collected one ground water sample from each of the 8 monitor wells at Pyrolac. A field blank was also collected. The wells were purged by pumping and the samples were collected with decontaminated bailers after well recovery. Ground water data (e.g., water level measurements) were also collected pursuant to NJAC 7:14 A-6.12. All sampling protocol and decontamination procedures followed were in accordance with the guidelines established in the NJDEP Field Procedures Manual for Water Data Acquisition. All samples were analyzed for VOCs using

EPA Method 624 by Laboratory Resources, Inc., a New Jersey certified laboratory (NJ02046).

Results

Monitor wells 1 through 8 were sampled on January 3, 1992 and all samples were analyzed for VOCs. The monitor well locations are shown on Figures 1-6. The results for MW1 through MW4 show that, other than 1,1,1-trichloroethane at a concentration of 81 ug/l in MW1 and 5 ug/l in MW2 and 4-methyl,2-pentanone at 15 ug/l in MW1, all other priority pollutant volatile compounds were either non-detectable, or detectable at concentrations below the practical quantitation level. Acetone was detected at concentrations of 106 ug/l, 15 ug/l and 148 ug/l in MW1 through MW4, respectively. However, acetone, which is not a priority pollutant, was also detected in the method blank (Table 1). No additional compounds were detected in the library searches for MW1 through MW4, with the exception of MW1 where the concentration of total non-targeted compounds was estimated at 7 ug/l (Table 2).

For MW5 through MW8, benzene concentrations ranged from non-detectable in MW6 and MW7 to 349 ug/l in MW8. Toluene ranged from 674 ug/l in MW5 to 46,941 in MW8; total xylenes ranged from 381 ug/l in MW5 to 11,251 ug/l in MW6; and, ethylbenzene ranged from 275 ug/l in MW5 to 2,109 ug/l in MW6. 1,1,1-trichloroethane was detected at a concentration of 499 ug/l in MW6 but was not detected in MW5, MW7 or MW8. All other targeted compounds were not detected in MW5 through MW8 with the exception of acetone at 896 ug/l in MW7 and 1,1-dichloroethane which was detected below the practical quantitation level in MW7 (Table 1). Total non-targeted volatile compounds ranged from not detected in MW8 to an estimated concentration of 23,200 ug/l in MW6 (Table 2). Attachment 1 is a copy of the analytical report of the January 3, 1992 sampling event.

The ground water data which were collected on January 3, 1992 are presented in Table 3. Headspace analysis with an HNu ranged from no response in MW1 through MW5 and in MW7 to 130 ppm in MW6 and 500 ppm in MW8. No free product was observed in any well except MW6 where there was a trace of floating product not measurable by the interface meter (i.e., <0.01 inch). The ground water elevation in MW6 was anomalous relative to surrounding wells (e.g. MW1, MW2 and MW7 where the water table elevation is 7 to 10 feet greater). This anomaly was also found in the earlier sampling events. An examination of the boring logs for the wells indicates that for MW6 from about 11 feet to 22 feet, the soil was generally silt/clay, as opposed to the surrounding wells which are generally in fine sand/silt. Also, during the sampling event, the recharge rate for MW 6 was observed to be considerably less than the surrounding wells. The low permeability of the predominantly silt/clay into which MW6 was drilled may therefore have led to the anomalous results.

Discussion

The ground water contours from the 1/92, 10/90 and 7/90 sampling events are shown in Figures 1 through 3, respectively. As all figures demonstrate, ground water flow is generally to the south. Figures 4 through 6 show the concentrations of total targeted compounds from the 1/92, 10/90 and 7/90 sampling events. Also, comparative results from the three sampling events for both targeted and non-targeted VOCs are listed in Table 4. With respect to targeted VOCs, MW8, which had the greatest concentration in 7/90, still had the greatest concentration in 10/90 and 1/92 but, the concentration decreased from >100,000 ug/l in 7/90 to <70,000 ug/l in 10/90 and <62,000 ug/l in 1/92. Similarly, in MW6, total targeted VOCs dropped from 65,000 ug/l in 7/90 to 38,000 ug/l in 1/92. In MW5 and MW7, the concentration of VOCs in 1/92 was approximately half of that in 7/90. In general, then it appears that contamination by VOCs at the Pyrolac site while still pronounced, has decreased. However, while maximum concentrations have decreased, the data also indicate that the contaminant plume may be migrating off site.

Sincerely,

CARPENTER ENVIRONMENTAL

FACT SHEET

For NJPDES Permit to Discharge
Into the Ground Waters of the State

NAME AND ADDRESS OF APPLICANT:

Pyrolac Corporation
55 Schoon Avenue
Hawthorne, NJ 07506

NAME AND ADDRESS OF FACILITY WHERE DISCHARGE OCCURS:

Pyrolac Corporation
55 Schoon Avenue
Hawthorne, NJ 07506

RECEIVING WATER:

Ground waters of the State. The discharge is to the water table aquifer in the unconsolidated zone and the underling bedrock formation (Brunswick).

HYDROGEOLOGY

The site is overlain by a layer of glacial sediments (Wisconsin period) at depths of up to at least 35 feet. Depth to bedrock surface is approximately 26-40 feet below the surface. The water table is encountered anywhere between 9 to 26 feet. The general flow direction of the ground water is to the south. The range of the water table elevations is do to clay lenses or highly unpermeably.

DESCRIPTION OF FACILITY:

Pyrolac Corporation was established in 1951 by the New Jersey Lacquer Corporation as a paint products manufacturer. In 1964 the facility was bought by Vulcan Lacquers. The present owners bought the facility in 1977. The name Pyrolac has remained the same for all three owners.

Operations at the facility include the production of primers, lacquers, bake enamels, water-reduction products, Hi-solids (EPA approved) coating, and solvent reducers and cleaners. Most of the manufacturing is of custom-blended paints for industrial use as protective or decorative paint coatings. Eleven underground storage tanks located in the rear of the facility (2,000 - 6,000) are used to store raw solvents. The warehouse on-site stores raw materials such as resins, pigments, additives, and finished products. There are drum storage areas on-site which are covered and uncovered.

Presently waste from production activities at the site are EPA classified and removed by an industrial waste hauler. Part of the waste which is hauled away is processed as recovered solvents and brought back to Pyrolac. The recovered solvent is used to clean various paint production tanks. A trench area on the east side of the property was previously used for waste dumping.

Soil samples taken by NJDEP May 10, 1985 from the rear of the facility were found to contain significant amounts of volatile organic compounds. During this same time, samples were taken from the floor drains in the solvent distribution room and were found to be contaminated with volatile organics. Consequently the floor drains in the facility were sealed.

DESCRIPTION OF DISCHARGE:

Actual and potential discharges exist from underground storage tanks and piping system, as well as drum storage areas and the existing waste trench.

PERMIT CONDITIONS:

According to the attached general and special conditions. These conditions were set forth in consideration of the New Jersey Water Pollution Control Act, N.J.S.A. 58:10A-1 et seq., and its implementing regulations, the New Jersey Pollutant Discharge Elimination System (NJPDES), N.J.A.C. 7:14A-1 et seq. The subchapters applicable to NJPDES Discharge to Ground Water permits are: Subchapter 1, General Information, Subchapter 2, General Requirements for the NJPDES Permit, Subchapter 5, Additional Requirements for Underground Injection Control Program, Subchapter 6, Additional Requirements for Discharges to Ground Water, Subchapter 7, Procedures for Decision-Making, Subchapter 8, Public Comment and Notice Procedures, and Appendix B. The conditions are also based on the administrative record, which contains, correspondence concerning the permit, the Fact Sheet and documents cited therein, the results of any past monitoring, the draft permit, and any past permits issued to the facility.

The ground water protection standards are formulated in consideration of the Appendix F and the Ground Water Quality Standards, N.J.A.C. 7:9-1 et seq.

FINAL PERMIT

The decisions on the content of the final permit will be based on the issues raised during the public comment period. The Department shall issue a response to all significant comments, as per N.J.A.C. 7:14A-8.7.

TO: Pyrolac Corporation File
THROUGH: Barbara Dietz Kantor *BK*
FROM: Wes Hendricks *WH*
SUBJECT: Pyrolac Corporation Site Inspection

NOV 30 1992

INSPECTION REPORT

CASE NAME: Pyrolac Corporation

PAC: WBY

SITE ADDRESS: 55 Schoon Ave.
Hawthorne
Passaic Co.

DATE: November 19, 1992
ARRIVAL TIME: 10:15 am
DEPARTURE TIME: 1:10 pm
WEATHER: Mostly Sunny/Cool
TEMP: -45° F

INVESTIGATOR: Wes Hendricks
Jay Basavanhally

Representatives Present:

1. Mark Dulberg, President of Pyrolac Corp.

Purpose of Inspection: To conduct preliminary site inspection to assess current conditions at the site. Also to observe the operations and activities conducted at the site.

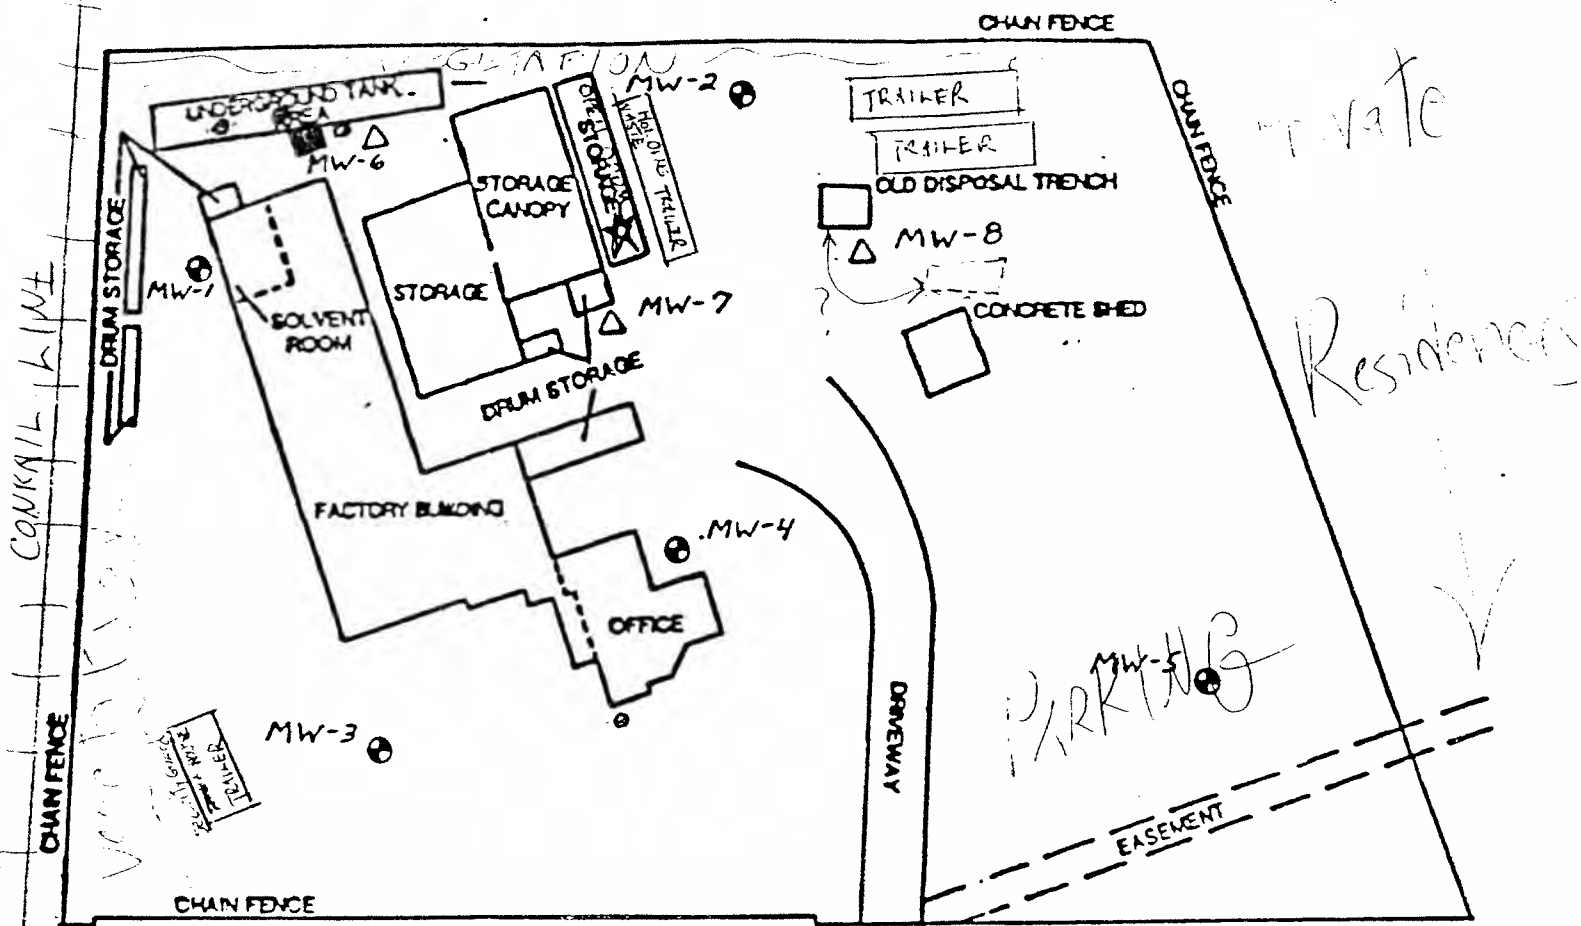

Findings: When we arrived the receptionist informed us that Mr. Dulberg was in the middle of an annual fire department inspection with a member of the Hawthorne Fire Department. We were instructed to wait in the lobby until Mr. Dulberg was finished with the fire inspection. After waiting approximately 20 minutes, this writer and Jay Basavanhally of the Bureau of State Case Management met with Mr. Dulberg to discuss the operations performed at the site and also the impending ACO. We noticed a distinct odor of solvents as soon as we entered the main lobby of the office building. We later toured the facility with Mr. Dulberg. The smell of solvents was present throughout the entire facility. I noted that there was not much activity taking place in the plant during our inspection. Inside the plant there was evidence of pigmented materials spattered on portions of the walls and floors, some degree of uncleanness throughout but the containers of raw materials and final product seemed to be segregated and stacked in some semblance of order. There was no apparent evidence of any floor drains in the plant, however Mr. Dulberg did show me where three (3) previously existing floor drains were located. These drains had been capped and permanently sealed but he wasn't sure when. Mr. Dulberg stated that to his knowledge none of his employees ever dumped any materials down these floor drains. In general the interior and overall structure of the plant did not appear to be well maintained and there seemed to be somewhat of a lack of proper housekeeping inside the facility.

We then proceeded to inspect the exterior of the buildings and the grounds around the facility. Mr. Dulberg, at that time indicated that he had business to attend to and would not be available for the rest of the day, but we could proceed without him. The site was unpaved and the perimeter of the site was completely surrounded by chain-link fencing. The main gate at the driveway entrance is the only access point to the site. There is a house trailer on the western corner of the property; a guard lives in the trailer and provides round-the-clock security for the site. The area where the chemical waste disposal trench once existed was filled in, covered with loose gravel and sparse vegetation was growing on that spot. There were no signs of contamination on the surface in the area of the former trench. There was a small shed approximately 100 feet from the main building complex for storage of nitrocellulose. At the time of this inspection

there were 14, 55-gallon labeled drums of nitrocellulose inside; thirteen (13) of these drums were made of stainless steel and were in good condition, one (1) drum which was not stainless steel showed signs of corrosion. There was one empty nitrocellulose drum outside of the shed laying on it's side. There were two (2) trailers in the northeast quadrant of the site which were partially filled with green, 55 gallon drums which looked new and were presumed to be empty, judged by how easily a worker lifted and carried them. There was another trailer near the north corner of the site, which was closed and we were unable to view it's contents. Adjacent to the warehouse section of the main building complex was an outdoor, raw material drum storage area which was partially covered by a roof. There was estimated to be approximately 200, 55 gallon drums of material in this area. These drums were stored on pallets two and three high. Many of the drums appeared to be corroded and many pallets were weak and crumbling. The unsafe appearance of these drums was mentioned to Mr. Dulberg during our plant tour. We later noticed that at least three (3) drums in this area were ruptured and were spilling their contents onto the ground. The substance was a viscous, dark brown fluid which stained the ground immediately below. The leaky drums were labeled: ALKYD RESIN SOLUTION, 93-111 VMP Naphtha. This incident was later reported to Mr. Dulberg and the Hawthorne Fire Department by this writer. Mr. Dulberg informed me that he would address this problem immediately. There was a small area in the north corner of the site where 55 gallon drums containing hazardous waste were stored, these drums were labeled: EPA Waste No. F005, EPA I.D. NJD001271931, were crushed or broken. Next to these drums, to the east were a total of 22 labeled 55 gallon drums also stacked two high containing various enamels. The components of these enamels include toluene, titanium oxide, silica quartz, xylene, VMP naphtha, alkyd resin solution and yellow oxide. Also in the northern section of the site, in an area where eleven (11) UST's are located was a subsurface 7'x7'x7' cement enclosure covered by a metal lid. Inside this structure was a series of valves and piping, this "pit" appeared to be dry with no sign of chemical discharges. There were at least three (3) fill pipes protruding out of the ground in this area as well. In the front of the office building was another fill pipe marked "Oil" with dark stained soil surrounding it. The remainder of the site appeared relatively clean and fairly well kept.

EXPEDITED REMOVAL ASSESSMENT CRITERIA

Site Name: Pyrolac
Address (Street; Block; Lot; City; County; State; Zip Code): 55 Schoon Avenue, Hawthorne, Passaic County, NJ 07506
NRC Case #: n/a **State Case #:** n/a
State Referral Date: 8/28/96 **State Response Date:** n/a
State Investigator/Phone #: _____
EPA Investigation Date: 11/26/96 **EPA Investigator(s):** M. Chong
Instruments Used/background readings: Hnu. No significant readings
Pending Actions (HAZCAT, Sampling, etc): None
Access Agreement: Verbal: Yes;

I. STRIP MAP/DIRECTIONS TO SITE

Garden State Parkway to Exit 159 to Rte 80 West, Exit 60 onto McLean Blvd (as known as Rte 20 North), this roads go alongside the Passaic Rive, follow signs for Fairlawn, over bridge, first left, onto Wagaraw Ave. Schoon Ave is 6 blocks on the right.

II. SITE CHARACTERISTICS

A. Physical Location

1. Type of Facility: Paint Manufacturer

i. current use: abandoned

ii. previous use(s): manufactured paints

2. Nature of Neighborhood: residential and industrial

B. Size

1. Size of Property: 2.6 acres

2. Number and Size of Buildings: Three buildings plus an overhang area

3. Building Construction Type (e.g., cinder block, wood, etc; roof,

flooring type, etc.): brick, and metal

5. Fire Protection Systems: None

C. Site Conditions

1. Condition of Buildings: Structurally sound

2. Types of Building(s) Construction: _____

i. masonry w/ wood roof: _____

ii. masonry w/metal roof: 2 of the buildings

iii. wood: _____

iv. other: two of the buildings are masonry with metal roof.

The third Building used for storage can be accessed through the main bldg and is constructed of metal.

3. Containment Structure(s) Condition: n/a

4. Property Condition/Characteristics (asphalt, crops, wetlands, etc): _____ Paved driveway, rest of the property is overgrown shrubs and grass

5. Security:

i. building: none

ii. property: gates are closed and property fenced.

iii. site occupancy: none

a. hours of occupancy: none

b. abandoned (date): April 23, 1995

iv. fences: entire property is fenced

v. condition of fences: holes under the fence where vandals crawl under to access the property.

vi. evidence of public entry: property has been vandalised 4 times since the property has been abandoned.

vii. Entry Access:

a. locked (name & phone to unlock): Mark Dulberg (201) 217-0030

b. other means of access (open windows, etc): through holes under fence on the Amtak side of the property

(existing - on/off): _____

i. electric: off

ii. water: off

iii. other (e.g., gas, fire hydrants): _____

7. Underground Storage Tanks (Existing - On/Off/Unknown)

- i. fuel: _____
- ii. chemical: 1500 gallons total capacity under the building.
Currently empty. Tanks used to store solvents.

Migration Pathways:

- i. storm sewers (distance): located at the edge of the property.
- ii. sanitary sewers (distance): unk. Was not able to identify whereabouts.
- iii. others (distance): _____

II. THREAT

A. Number and Type of Containers

- 1. Drums (>30 gal): approximately 100 drums
- 2. 5-30 gal containers: approximately 200 containers
- 3. <5 gallon containers: approximately 400 containers
- 4. Tanks, Reactor Vessels, etc.: all tanks were empty
- 5. Other (ie, cylinders, explosives): 1 cylinder (unk contents), various Bagged pigments etc

B. Estimated Quantities

- 1. Suspected/estimated: unknown amounts of flammable liquids
- 2. Verified: via observation

C. Material Identification

- 1. Material Classification
 - i. Oil: _____
 - ii. CERCLA hazardous substance(s): lacquers and paints containing such Materials as butyl alcohol, xylene, isopropyl alcohol, toluene, acetone, alkyl resin solution.
Pigments and solvents used in the manufacture of paint.

iii. RCRA hazardous waste(s): _____

2. Method of Material Identification

- i. suspected:
 - a. prior site information: _____
- b. container labels: yes
- c. other: former owner identified the contents while on site.
- ii. verified:
 - a. field screening (method; e.g., DRI, hazcat): _____
 - b. analysis: _____
 - c. other: observation.

D. Condition of Containers and Materials

- 1. Stable: yes
- 2. Discharge
 - i. potential: yes, if tampered by vandals
 - ii. imminent: _____
 - iii. actual: many contents of material released onto the floor of buildings via vandalism.

E. Potential Receptors

- 1. Human
 - i. number of nearby residents & distances: approx. 5 residences within 100 ft of the property. One residence borders

the property.

ii. number of nearby businesses & distances: 3 businesses
borders the property. Approximately 15 businesses within 1500
yds of the property. iii. other (ie significant
roadways/RR): Amtrak RR tracks borders the property.

iv. sensitive receptors: _____

2. Environmental

i. Nearby Waterways

a. name (& distance(s)): Passaic River, approximately
0.125 miles. b. confluences (& distance(s)): _____

c. water intakes (distance(s)): unk

ii. Other (e.g., wetlands, etc.): _____

III. SITE LEGAL STATUS

A. Current Status of Site Ownership: Abandoned

B. Current Status of Site Operations: None

C. Status of Site Cleanup(s): _____

1. Previous: None

2. Present: None

D. Past/Present Enforcement:

1. Local: None

2. State: According to the former owner, there was some action by
NJDEP, and there was a PRP meeting a few yrs ago. However
further action was pursued by NJDEP

3. EPA: To be determined

4. Other: _____

E. Suspected PRPs:

Phone	Name	Address
1.	<u>Mark Dulberg</u>	<u>201-217-0030</u>
2.	_____	_____
3.	_____	_____
4.	_____	_____
5.	_____	_____
6.	_____	_____

F. Site Sketch:

IV. Additional Information

Mr. Dulberg claims that in 1971, Pyrolac (then owned by the original operator, Monroe Rappaport) disposed of drums of waste (paint type) from a facility called Plytgen, Brooklyn, NY. The waste was dumped in a trench located in an open area on the property. He claims that affidavits from witnesses were obtained and there is evidence in existence (held by NJDEP and Dulberg's former attorney) that identifies the PRPs for the waste disposal on the property. He names Warner Klugman as one of the PRPs.

Mr. Dulberg has full knowledge of all the material on the property and is willing to assist EPA to clean up the site. To access the property in the future, EPA may need permission from the bankruptcy court to enter the property.

UNITED STATES ENVIRONMENTAL PROTECTION AGENCY - REGION II

290 BROADWAY

NEW YORK, NEW YORK 10007-1866

ACTION MEMORANDUM

DATE: AUG 23 1997

SUBJECT: Request for Confirmation of Verbal Authorization and a Ceiling Increase for a Removal Action at the Pyrolac Corporation Site, Hawthorne, Passaic County, New Jersey

FROM: Irmgard P. Huhn, On-Scene Coordinator
Removal Action Branch

TO: Jeanne M. Fox
Regional Administrator

THRU: Richard L. Caspe, Director
Emergency and Remedial Response Division

Site ID #: JC

I. PURPOSE

The purpose of this Action Memorandum is to document verbal authorization for the removal action in progress at the Pyrolac Corporation Site (Site) located at 55 Schoon Avenue in Hawthorne, Passaic County, New Jersey, 07506 and to request a ceiling increase to complete the current action. Funding provided under a verbal authorization to secure and stabilize the Site was \$245,000, of which \$210,000 was for mitigation contracting. An additional \$216,500 for mitigation contracting is requested to continue removal activities at the Site. If approved, the new

project ceiling will be \$613,500. The removal activities to complete the project are discussed in this Action Memorandum.

The Site is an abandoned facility formerly used to manufacture paint and industrial coatings. The Site is not on the National Priorities List (NPL). There are no nationally significant or precedent-setting issues associated with the proposed response.

II. SITE CONDITIONS AND BACKGROUND

The Comprehensive Environmental Response, Compensation and Liability Information System ID Number for the Site is NJD001271931.

A. Site Description

1. Removal site evaluation

On August 28, 1996, in response to a verbal referral from the New Jersey Department of Environmental Protection (NJDEP), the U.S. Environmental Protection Agency (EPA) Response and Prevention Branch conducted a preliminary site investigation. On November 26, 1996, access was provided by the former owner. EPA personnel and Region II Superfund Technical Assessment and Response Team (START) personnel documented the presence of hundreds of drums, containers varying in size from five to 30 gallons, and small (less than five gallon) lab containers. With the assistance of the former owner, materials in the containers and drums were identified as lacquers and paints composed of various hazardous materials, such as butyl alcohol, xylene, isopropyl alcohol, toluene, acetone and alkyl resin solution. In addition, bags of pigments and containers of solvents used in the manufacture of paint were documented to be stored at the Site.

The referral letter from NJDEP to the Director of the Emergency and Remedial Response Division was received on January 24, 1997. The referral letter is attached as Appendix A.

EPA and START returned to the Site on February 25, 1997. Analytical results from sampling activities indicated the presence of volatile organic compounds (VOCs), semivolatile organic compounds (SVOCs) and flammable liquids. This investigation verified the presence of hazardous substances in drums at the Site.

A review of the NJDEP site file revealed the following information.

Past owners and operators of the facility were cited by the Hawthorne Fire Department during the 1970's for numerous violations of the local fire prevention ordinance. Some of the violations included poor housekeeping, improper storage, dumping, and spillage of materials.

A May 6, 1985, Resource Conservation and Recovery Act (RCRA) inspection by the NJDEP Division of Waste Management noted spillage of waste materials in various areas on the property, unlabeled drums and other violations of state statutes. On May 6, 1985, NJDEP collected a sample from the "solvent distribution room" floor drain and a composite sample of soil from the drum storage area at the northwestern portion of the facility. The soil sample contained volatile organics, including: toluene (1,200 ppb) and ethylbenzene (16,000 ppb). The sample from the "solvent distribution room" floor drain contained base neutral acid extractables including: naphthalene (11,000 ppb) and volatile organics, including: toluene (24,000 ppb) and ethylbenzene (14,000 ppb).

A follow-up inspection conducted by NJDEP on June 18 discovered that drums in the storage area were labeled, but not moved and empties were still present.

Beginning in 1986, as a result of an inspection conducted by NJDEP, the site was the subject of an investigation concerning potential groundwater contamination. Following the installation and sampling of wells installed at the site, groundwater contamination was confirmed to be present. Well samples collected during the period of July -September 1990 revealed the presence of: toluene (2,000 to 9,200 ppb), total xylene (1,280 to 19,400 ppb) and ethylbenzene (1,500 to 4,300 ppb) in addition to low levels of other contaminants.

On January 26, 1993, a draft Administrative Consent Order (ACO) was sent out to past owners and operators of the facility.

On June 28, 1993, the NJDEP Division of Responsible Party Site Remediation issued a Directive and Notice to Insurers pursuant to the Spill Compensation and Control Act, to Pyrolac and Ply-Gem Corp., to conduct a Remedial Investigation and Remedial Alternative Analysis (RI/RAA) and cleanup and remove discharges at the Site.

On November 24, 1993, Pyrolac executed an ACO with the NJDEP for the cleanup of the Site with the stipulation that the ACO would not become effective unless the responsible party (RP) could obtain financial assistance from the Department's Hazardous Discharge Site Remediation Fund. Efforts by the RP to obtain funding failed and the case was listed by the Department to await a publicly funded cleanup. No other parties named in the January 23, 1993 letter responded positively.

Some materials were removed by Pyrolac prior to their filing for Chapter 7. The quantity of materials removed is not known.

2. Physical location

The Site is located in a mixed industrial and residential area of Hawthorne Borough, Passaic County. It is approximately 2.5 acres in size and is bordered to the north by a plastic manufacturing facility and the Erie-Lackawana railroad, to the west by Schoon Avenue, and to

the south and east by Passaic Avenue. The Site is designated as block 17, lot 11, on the tax map of the Hawthorne Borough. The Passaic River is approximately one tenth of a mile from the Site.

3. Site characteristics

The Pyrolac Corporation operated as a manufacturer of industrial protective coatings until October 1994 when the current owners ceased operations.

Records on file with the Hawthorne Fire Department indicated that during the period from 1964 to 1977, Pyrolac received chemical waste from Ply-Gem Corporation and disposed of the material by dumping it into a ditch on the Site. In addition, poor housekeeping and sloppy operations resulted in numerous chemical spills onto the property. It is believed that these actions have contributed to the groundwater contamination, which has been documented at the Site.

Records regarding site ownership indicated that Vulcan Lacquer and Coatings Co., Inc. (Vulcan) purchased the Site in 1966. Vulcan changed its name to Pyrolac Corporation in 1967 and continued operations at the Site until 1977, when the business was sold to Gail and Stephen (deceased) Dulberg. Operations continued at the Site under the ownership of Gail Dulberg, with the daily operations being managed by company president, Mark Dulberg.

Operations at the Site continued under Pyrolac until October 1994 when the current owners ceased operations and filed for protection under Chapter 7 of the Bankruptcy Code. On February 14, 1995, the personnel property of the Debtor was abandoned. The appointed bankruptcy trustee abandoned the property on April 23, 1995.

The activities described in the Action Memorandum would be a continuation of the first removal action at the Site, commencing with activities conducted under verbal authorization.

4. Release or threatened release into the environment of a hazardous substance, or pollutant

The materials sampled and analyzed during the site investigation identified the following hazardous substances as defined by Sections 101(14) of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA), or pollutants, or contaminants as defined by Section 101(33) of CERCLA:

Material	Storage Method	Primary Hazard
Nitrocellulose	55-Gallon Drums, 1-Gallon Cans	Flammable, Highly Dangerous in Dry State Can Ignite and Burn Rapidly with Intense Heat
Acetone	55-Gallon Drums	Ignitable
n-Butyl Acetate	55-Gallon Drums	Ignitable, Toxic by Inhalation
Ethyl Benzene	55-Gallon Drums	Ignitable, Toxic by Inhalation and Absorption
Isopropyl Alcohol	55-Gallon Drums, UST*	Ignitable
Mineral Spirits, Type I	55-Gallon Drums, UST	Toxic by Ingestion
Methyl Ethyl Ketone	55-Gallon Drums	Ignitable
Methyl Isobutyl Ketone	55-Gallon Drums, UST	Ignitable, Toxic by Inhalation
Toluene	55-Gallon Drums, UST	Ignitable, Toxic by Inhalation
Xylene	55-Gallon Drums, UST	Ignitable
Nitric Acid	Lab Container	Corrosive
Perchloric Acid	Lab Container	Corrosive
Aluminum Paste ¹	35-Gallon Drums	Flammable Solid
VM&P Naphtha ²	55-Gallon Drum, UST	Ignitable, Toxic by Inhalation and Ingestion

1 - Contains aluminum flake, white spirit and xylene (5%)

2 - Contains c7-c8 saturated hydrocarbons, ethylbenzene, toluene and xylene

* underground storage tank

An inventory of materials obtained during actions conducted under the verbal authorization identified approximately 500 55-gallon drums, 700 five-gallon pails and over 2500 (<5-gallon) containers. In addition to the drums and containers on-site, there are eleven underground storage tanks which were used for solvent storage. UST Registration documents obtained from the NJDEP identified the tanks as storing: recovered solvent, xylol, VMP naphtha, methyl isobutyl ketone (MIBK), toluol, lacquer thinner, butyl acetate, butyl alcohol, mineral spirits and isopropyl alcohol.

A substantial fire or explosion hazard exists at the Site. Site access and vandalism have historically been a problem at the Site. Buildings were not secured and could be easily accessed. A fire occurred at the Site on June 11, 1997, involving a section of the building which appeared to be a lab/QA/QC area. Smoke emanating from the fire resulted in a plume that impacted the residential and industrial area north and east of the Site. The Agency for Toxic Substances and Disease Registry (ATSDR) is presently investigations two cases of potential exposure.

Hazardous substances released to the ground could migrate via surface water into storm drains, which are down gradient of the building. These storm drains discharge to the Passaic River.

5. NPL status

The Site is not listed on the NPL. An Integrated Assessment is being conducted to determine if the Site would rank on the NPL.

6. Maps, pictures, and other graphic representations

Figures 1 and 2, included as Appendix 2, provide the location and configuration of the Site.

B. Other Actions to Date

1. Previous actions

On July 29, 1985, NJDEP issued a letter to Pyrolac with a Penalty Settlement offer and an Administrative Order regarding the violations of the Solid Waste Management Act for: accumulating hazardous waste in containers, no hazardous waste permit, incomplete manifests, improper drum labeling, no hazardous waste training program or contingency plan.

On August 1, 1985, Pyrolac contracted S&W Waste to remove the top four inches of soil in the northwestern drum storage area.

2. Current actions

Due to a fire at the Site, verbal authorization to conduct a removal action was granted by the Director of the Emergency and Remedial Response Division on June 12, 1997. Twenty-four hour security was provided on June 12, 1997. Access points in the fence were repaired and the building access was secured with locks. Approximately 90% of the materials have been sampled and characterized. As containers were sampled, leaking or unstable drums were secured via overpacking or transferring material into stable containers.

No current actions are being conducted at the Site by either State or local governmental agencies.

C. State and Local Authorities' Role

1. State and local actions to date

On August 28, 1996, the NJDEP verbally referred the Site to EPA for removal action consideration.

On January 24, 1997, the NJDEP formally referred the Site to EPA.

A fire occurred at the Site on June 11, 1997. The police and fire department responded and the fire department extinguished the fire with support from surrounding fire department units. NJDEP and the local health department also responded to assist after the fire. The Hawthorne Police Department provided site security after the fire until June 12 when the Emergency Response Cleanup Service (ERCS) contractor was mobilized.

2. Potential for continued state/local response

Currently, there are no actions being taken by State or local government entities to address the hazardous materials at the Site.

The Passaic County Prosecutors office has been communicating with EPA and conducted an investigation of the Site during the week of July 21, 1997.

III. THREATS TO PUBLIC HEALTH, OR WELFARE, OR THE ENVIRONMENT AND STATUTORY AND REGULATORY AUTHORITIES

The following factors described in 40 CFR Part 300.415(b)(2) of the National Contingency Plan (NCP) were applied in determining the appropriateness of a removal action at the Site.

- (i) Actual or potential exposure to nearby human populations, animals, or the food chain from hazardous substances, or pollutants, or contaminants;
- (ii) Hazardous substances, or pollutants, or contaminants in drums, barrels, tanks, or other bulk storage containers, that may pose a threat of release;
- (iii) Weather conditions that may cause hazardous substances or pollutants, or contaminants to migrate or be released;
- (iv) Threat of fire or explosion; and
- (v) The availability of other appropriate federal or state response mechanisms to respond to the release.

A. Threats to Public Health or Welfare

- i. Actual or potential exposure to nearby human populations, animals, or the food chain from hazardous substances, or pollutants, or contaminants:**

Hazardous substances stored at the Site pose a threat to public health. A release of hazardous substances could result in the exposure of neighboring population to hazardous substances through direct contact, fire, and/or through contamination of the environment.

ii. **Threat of fire or explosion**

The hazardous materials present at the Site have characteristics of ignitability. The Site has been the subject of a fire, which occurred on June 11, 1997. People working and/or living near the Site were potentially exposed to hazardous substances released into the atmosphere by the fire and explosions.

B. **Threats to the Environment**

i. **Hazardous substances, or pollutants, or contaminants in drums, barrels, tanks, or other bulk storage containers, that may pose a threat of release**

Hazardous substances stored in drums and tanks pose a threat of release to the environment. The Site is located on an elevated lot which is located upgrate of a residential area. If released, hazardous substances could migrate to the Passaic River via surface water runoff or groundwater pathways.

ii. **Weather conditions that may cause hazardous substance, or pollutants, or contaminants to migrate or be released**

Site topography is such that it would promote surface water runoff. Given the conditions of the Site, poor housekeeping practices, and historical spills, severe weather conditions are likely to promote the off-site migration of contaminants.

IV. **ENDANGERMENT DETERMINATION**

Actual or threatened releases of hazardous substances from the Site, if not addressed by implementing the response action selected in this Action Memorandum, may present an imminent and substantial endangerment to public health, or welfare, or the environment.

V. **PROPOSED ACTIONS AND ESTIMATED COST**

A. **Proposed Actions**

1. **Proposed action description**

The purpose of this Action Memorandum is to document actions taken by EPA at the Site under verbal authorization of the Director of the Emergency and Remedial Response Division and to request the additional funds necessary to continue to address the immediate threats posed by the hazardous substances, pollutants and contaminants present at the Site. The following removal activities are proposed to address the threats still present at the Site:

- a. Security - will continue at the Site until the materials are shipped off site for disposal.

- b. Stabilization - waste in unstable containers will be transferred or overpacked and incompatible materials will be segregated.
- c. Sampling - will continue on the remaining ten percent of containers and composite samples of the wastestreams will be generated.
- d. Lab Analysis - will be conducted on bulk composite samples of the wastestreams.
- e. Disposal - Upon receipt of disposal analysis, waste profiles will be completed and sent to disposal facilities for acceptance. Compatible materials will be combined and disposed of off site at RCRA permitted facilities.

Additional monies are needed to complete the sampling, hazcatting and compatibility testing, generation of bulk composite samples, segregation of the fire area and composite sample analysis before transportation and disposal may be undertaken to complete the removal action.

2. Contribution to remedial performance

The removal action at the Site is consistent with the requirement of Section 104(a)(2) of CERCLA, which states, "any removal action undertaken...should...to the extent practicable, contribute to the efficient performance of any long-term remedial action with respect to the release or the threatened release concerned." Since any remedial action undertaken would

encompass the elements in this response, this removal action is consistent with any future remedial work.

3. Description of alternative technologies

Because of the quantities and types of the hazardous substances and waste at the Site, on-site treatment and/or incineration is not appropriate. The selected removal action includes the characterization, transportation of hazardous waste off site for treatment and/or disposal. The selected removal action has been determined to be the appropriate response action for the Site based upon the criteria of effectiveness, implementability and cost.

4. EE/CA

Due to the time-critical nature of this removal action, an EE/CA will not be prepared.

5. Applicable or Relevant and Appropriate Requirements (ARARs)

ARARS that are within the scope of this removal action will be met to the extent practicable. Federal ARARS determined to be applicable for the proposed scope of work include the

Resource Conservation and Recovery Act, Occupational Safety and Health Act and Hazardous Materials Transportation Uniform Safety Act.

6. Project schedule

The removal action discussed in this Action Memorandum was initiated on June 12, 1997 under verbal authorization from the Director of the Emergency and Remedial Response Division. Upon approval of this Action Memorandum, it is anticipated that remaining removal activities will require four-five months to complete.

B. Estimated Costs

The estimated costs for the completion of this project are summarized below:

	<u>Current Ceiling</u>	<u>Costs to Date</u>	<u>Proposed Ceiling</u>
<u>Extramural Costs:</u>			
<u>Regional Allowance Costs:</u>			
Total ERCS Costs (including 15% contingency)	\$210,000	\$188,500	\$426,500
<u>Other Extramural Costs Not Funded From the Regional Allowance:</u>			
Total START costs	\$ 20,000	\$ 12,000	\$ 45,500
Subtotal, Extramural Costs	\$220,000	\$200,500	\$472,000
Extramural Costs Contingency (15% of subtotal, extramural costs)	\$ -0-	\$ - 0 -	\$ 70,800
TOTAL, EXTRAMURAL COSTS	\$220,000	\$200,500	\$542,800
<u>Intramural Costs:</u>			
Intramural Direct Costs	\$ 4,901	\$ 1,598	\$ 23,100
Intramural Indirect Costs	\$ 10,099	\$ 6,402	\$ 47,600
TOTAL, INTRAMURAL COSTS	\$ 15,000	\$ 8,000	\$ 70,700
TOTAL, REMOVAL PROJECT CEILING	\$245,000	\$208,500	\$613,500

VI. EXPECTED CHANGE IN THE SITUATION SHOULD NO ACTION BE TAKEN OR ACTION DELAYED

Should no action be taken or the planned action be delayed, hazardous materials in tanks and containers could be released. A release of hazardous substances from these containers could result in the exposure of the neighboring population and/or contamination of the environment. Releases of contaminants to the ground and/or groundwater would increase the cost of the required removal action.

VII. OUTSTANDING POLICY ISSUES

No known outstanding policy issues are associated with the Site.

VIII. ENFORCEMENT

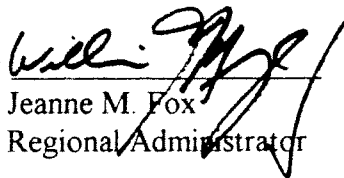

A potentially responsible party (PRP) search has been completed. To date, no responsible parties have been identified that are willing and able to conduct the required removal action. Investigations are continuing in an effort to identify additional, viable PRPs.

IX. RECOMMENDATION

This decision document represents the selected removal action for the Pyrolac Corporation Site, in Hawthorne, New Jersey developed in accordance with CERCLA, as amended, and not inconsistent with the NCP. This decision is based on the Administrative Record for the Site.

Site conditions met and continue to meet the NCP Section 300.415(b)(2) criteria for a removal and I recommend your approval of the verbal authorization of \$245,000 and proposed ceiling increase of \$368,500 to complete the proposed removal action. The total project ceiling, if approved, will be \$613,500. Of this, an estimated \$426,500 comes from the Regional removal allowance. Funds for this removal action are currently within the regional Advice of Allowance.

Please indicate your approval and authorization of funding as per current Delegation of Authority, by signing below.

Dear Director Caspe:

Re: Removal Request - Pyrolac Corporation
55 Schoon Avenue
Hawthorne, Passaic County

The New Jersey Department of Environmental Protection (Department) hereby submits the Pyrolac Corporation site ("site") for CERCLA removal action consideration. The following information details the case history and supports the removal request.

The site is located in a mixed industrial and residential area of Hawthorne Borough, Passaic County. It is approximately 2.449 acres in size and is bordered to the north by the Nexus Corporation facility and the Erie-Lackawana railroad, to the west by Schoon Avenue, to the south by Passaic Avenue and to the east by a wooded area. The site is designated as Block 17, Lot 11 on the tax map of Hawthorne Borough. Records regarding site ownership indicate that Monroe Rappaport (deceased) and Pauline Rappaport, of Vulcan Laquer Corporation, purchased the site in 1966 and continued operations at the site, under the name Pyrolac Corporation, until 1977. In 1977 the Rappaports sold the business to Gail Dulberg and Stephen Dulberg (deceased). Operations continued at the site under the ownership of Gail Dulberg, with daily operations being managed by company president, Mark Dulberg.

Pyrolac Corporation operated as a manufacturer of industrial protective coatings at the site until April 23, 1995 when the current owners ceased operations and abandoned the property.

Records regarding past operations indicate that during the period from 1964 to 1977 investigations by the Hawthorne Fire Department revealed that Pyrolac was receiving chemical waste material from Ply-Gen Corporation and disposing of the material by dumping it into a ditch on the site. In addition, multiple discharges of chemicals from the Pyrolac operation also contributed to the ground water contamination which has been documented at the site.

On November 24, 1993 Pyrolac executed an Administrative Consent Order with the Department for the cleanup of the site with the

stipulation that the ACO would not become effective unless the responsible party (RP) could obtain financial assistance from the Department's Hazardous Discharge Site Remediation Fund. Efforts by the RP to obtain funding failed and the case has been listed by the Department to await a publicly funded cleanup.

On April 22, 1996 the Passaic County Department of Health received a citizen complaint concerning odors coming from the direction of the Pyrolac Corporation site.

On May 16, 1996 personnel from the Passaic County Department of Health met with the former company president, Mark Dulberg, and conducted an inspection of the abandoned site. The investigation revealed the presence of approximately fifty 55-gallon steel drums containing various hazardous materials. In addition, materials were found stockpiled under a storage canopy located west of the factory building. Inside the factory building, which appeared to have been vandalized, numerous unlabelled containers were found broken, knocked over, or spilled onto the cement factory floor.

On August 28, 1996, the Department contacted the EPA and requested assistance in determining if the site was eligible for a CERCLA removal action. EPA personnel encountered problems gaining access to the property which resulted in a delay of the site inspection required by EPA to verify existing site conditions.

On November 26, 1996 access was provided by the former owner. EPA personnel documented the presence of approximately 200 drums, 200 containers varying in size from 5 to 30 gallons, and 400 small (less than 5 gallons) containers. With the assistance of the former owner, materials in the containers and drums were identified as lacquers and paints composed of various hazardous materials, such as, butyl alcohol, xylene, isopropyl alcohol, toluene, acetone, and alkyl resin solution. In addition, bags of pigments and containers of solvents used in the manufacture of paint were documented to be stored at the site.

The Department views the storage of the drums and containers of hazardous substances, and the documented evidence of vandalism at the property, to be a serious direct contact threat. In addition, the documented presence of flammable materials among the inventory of hazardous substances found at the site creates the potential for fire or explosion.

The Department therefore requests that EPA sample, characterize and dispose of all hazardous substances found at the site in such a way as to safeguard the local population, and perform any necessary investigatory and remedial work at the site as deemed appropriate.

Should your staff require additional information please have them contact Janet M. Smolenski of the Bureau of Field Operations, Case Assignment Section at (609) 292-2943.

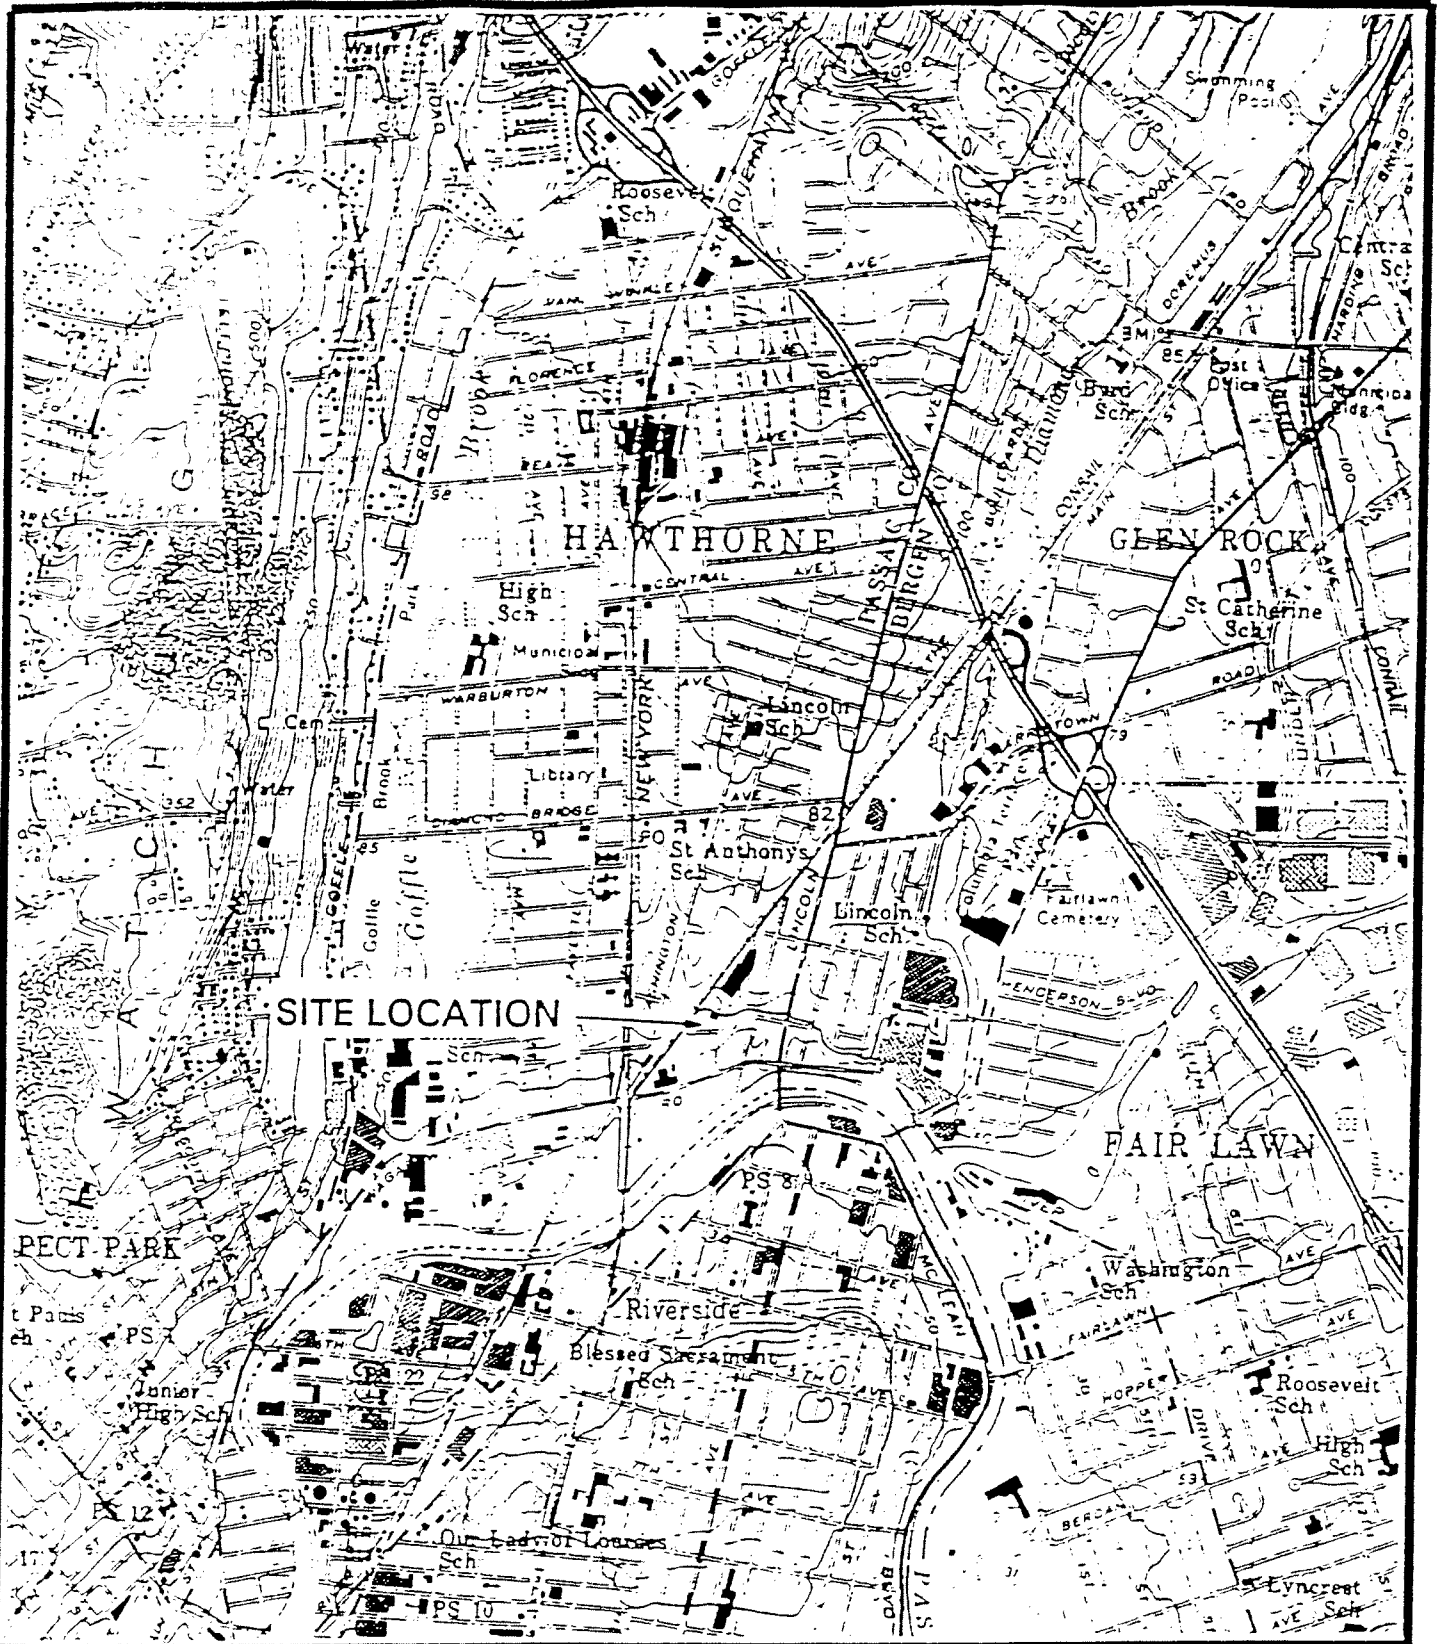

Sincerely,

Robert R. Van Fossen

Dear Director Caspe:

Re: Removal Request - Pyrolac Corporation
55 Schoon Avenue
Hawthorne, Passaic County

The New Jersey Department of Environmental Protection (Department) hereby submits the Pyrolac Corporation site ("site") for CERCLA removal action consideration. The following information details the case history and supports the removal request.

The site is located in a mixed industrial and residential area of Hawthorne Borough, Passaic County. It is approximately 2.449 acres in size and is bordered to the north by the Nexus Corporation facility and the Erie-Lackawana railroad, to the west by Schoon Avenue, to the south by Passaic Avenue and to the east by a wooded area. The site is designated as Block 17, Lot 11 on the tax map of Hawthorne Borough. Records regarding site ownership indicate that Monroe Rappaport (deceased) and Pauline Rappaport, of Vulcan Laquer Corporation, purchased the site in 1966 and continued operations at the site, under the name Pyrolac Corporation, until 1977. In 1977 the Rappaports sold the business to Gail Dulberg and Stephen Dulberg (deceased). Operations continued at the site under the ownership of Gail Dulberg, with daily operations being managed by company president, Mark Dulberg.

Pyrolac Corporation operated as a manufacturer of industrial protective coatings at the site until April 23, 1995 when the current owners ceased operations and abandoned the property.

Records regarding past operations indicate that during the period from 1964 to 1977 investigations by the Hawthorne Fire Department revealed that Pyrolac was receiving chemical waste material from Ply-Gen Corporation and disposing of the material by dumping it into a ditch on the site. In addition, multiple discharges of chemicals from the Pyrolac operation also contributed to the ground water contamination which has been documented at the site.

On November 24, 1993 Pyrolac executed an Administrative Consent Order with the Department for the cleanup of the site with the

Ref. 15

stipulation that the ACO would not become effective unless the responsible party (RP) could obtain financial assistance from the Department's Hazardous Discharge Site Remediation Fund. Efforts by the RP to obtain funding failed and the case has been listed by the Department to await a publicly funded cleanup.

On April 22, 1996 the Passaic County Department of Health received a citizen complaint concerning odors coming from the direction of the Pyrolac Corporation site.

On May 16, 1996 personnel from the Passaic County Department of Health met with the former company president, Mark Dulberg, and conducted an inspection of the abandoned site. The investigation revealed the presence of approximately fifty 55-gallon steel drums containing various hazardous materials. In addition, materials were found stockpiled under a storage canopy located west of the factory building. Inside the factory building, which appeared to have been vandalized, numerous unlabelled containers were found broken, knocked over, or spilled onto the cement factory floor.

On August 28, 1996, the Department contacted the EPA and requested assistance in determining if the site was eligible for a CERCLA removal action. EPA personnel encountered problems gaining access to the property which resulted in a delay of the site inspection required by EPA to verify existing site conditions.

On November 26, 1996 access was provided by the former owner. EPA personnel documented the presence of approximately 200 drums, 200 containers varying in size from 5 to 30 gallons, and 400 small (less than 5 gallons) containers. With the assistance of the former owner, materials in the containers and drums were identified as lacquers and paints composed of various hazardous materials, such as, butyl alcohol, xylene, isopropyl alcohol, toluene, acetone, and alkyl resin solution. In addition, bags of pigments and containers of solvents used in the manufacture of paint were documented to be stored at the site.

The Department views the storage of the drums and containers of hazardous substances, and the documented evidence of vandalism at the property, to be a serious direct contact threat. In addition, the documented presence of flammable materials among the inventory of hazardous substances found at the site creates the potential for fire or explosion.

The Department therefore requests that EPA sample, characterize and dispose of all hazardous substances found at the site in such a way as to safeguard the local population, and perform any necessary investigatory and remedial work at the site as deemed appropriate.

GENERAL SERVICES ADMINISTRATION

Superfund Update

Pyrolac Corporation Site

Hawthorne, New Jersey

EPA Region 2

June 1997

Recently, a fire occurred at the Pyrolac facility located at 55 Schoon Avenue in Hawthorne, Passaic County, New Jersey. The fire was quickly extinguished by Hawthorne's Volunteer Fire Department with the assistance of units from surrounding communities. All the fire departments worked well together and the lives and property of residents were protected and never in danger.

The U.S. Environmental Protection Agency (EPA) is issuing this update to inform area residents about the history of the Pyrolac facility and EPA's planned activities at the site. Prior to the fire, EPA was investigating the site at the request of the New Jersey Department of Environmental Protection. EPA's investigation determined that due to the presence of flammable liquids, solids, corrosive liquids and other hazardous substances at the facility, the site is eligible for a cleanup by EPA through the Federal Superfund program. Over the past several months, EPA has been seeking access to the facility from the present owner and issued an access order at the end of May. EPA obtained access the day following the fire.

Site Background

The Pyrolac Corporation site is an abandoned paint and coatings manufacturing facility. The site occupies approximately 2.5 acres and is bounded to the north by Nexus Plastics, Inc. and the Erie-Lackawana railroad, to the west by Schoon Avenue, to the south by Passaic Avenue and to the east by a wooded area.

Vulcan Lacquer and Coatings Co., Inc. (Vulcan) purchased the site in 1966. Vulcan changed its name to Pyrolac Corporation in 1967 and continued operations at the site until 1977, when the business was sold. Operations continued until 1994, when the current owners filed for bankruptcy. In April 1995, the property was abandoned. Hazardous substances and waste were left on the property and records regarding past operations indicated that chemical waste was disposed of on site.

After the June 11 fire at the site, the Hawthorne police department provided security until the

following day (June 12), when EPA obtained authorization under the Superfund Program to provide security and prepare the site for cleanup activities.

Current Actions

Under Superfund, EPA can respond to a release or the threat of a release of hazardous substances by conducting a removal action or requiring responsible parties to do the removal under EPA oversight. Removal actions are short term operations to reduce or eliminate the threats to public health or the environment associated with the release of hazardous substances.

EPA has taken actions to secure the site and initiate cleanup activities, which will include the removal of containers of hazardous substances and waste remaining at the facility, as well as address the underground storage tanks and the portion of the building affected by the fire. That work is expected to begin on June 25, 1997 and should be completed sometime in October 1997.

Future Actions

EPA will conduct additional investigations at the site focusing on onsite areas reported to have been used for the disposal of hazardous substances and waste and potential areas of soil and groundwater contamination. The results of this investigation will be evaluated to determine if further action is warranted under the Superfund Program.

EPA is closely coordinating all of its activities with Borough of Hawthorne officials.

For More Information

For information about EPA's investigation and response action at the Pyrolac site, contact Irmee Huhn at (908) 906-6813 or Ann Rychlenski at (212) 637-3672.

Superfund Ombudsman

EPA Region 2 has designated an ombudsman as a point of contact for community concerns and questions about the federal Superfund program in New Jersey, New York Puerto Rico and the U.S. Virgin islands. To support this effort, the agency has established a 24-hour, toll-free number that the public can call to request information, express their concerns or register complaints. The ombudsman for Region 2 is:

George Zachos
U.S. EPA, Region 2
2890 Woodbridge Avenue, MS-211
(908) 321-6621 OR Toll-free (888) 283-7626

SITE SUMMARY

The Pyrolac Corporation (Pyrolac) site (CERCLIS ID No. NJD001271931) is a 2.45-acre, inactive manufacturing facility located at 55 Schoon Avenue in a mixed industrial and residential portion of Hawthorne, Passaic County, New Jersey (Ref. Nos. 1, 3). A 20,000-ft² building exists on the site; this main building contains offices, a laboratory, manufacturing and storage areas. A drum storage building and a solvent drum storage canopy area are located on the eastern side of the main building. A concrete shed, formerly used for nitrocellulose-containing drum storage, is located approximately 180 feet east of the main building offices (Ref. No. 15, Att. A, p. 6, and Att. K, p. 12). Eleven underground storage tanks (USTs), with capacities ranging from 2,000 to 6,000 gallons, are situated near the northern corner of the site; the USTs formerly contained manufacturing feedstock materials, which included solvents such as toluene, xylene, and VMP naphtha (Ref. No. 12, Att. A, pp. 4, 5). The site is bordered on the north by NJ Transit railroad tracks and the Nexus Plastics, Inc. facility; on the east by a residences along Passaic Avenue; and on the south and west by a mixed residential and commercial area along Schoon and Vincent Avenues (Ref. Nos. 5; 15, Att. J, p. 2). The property is currently fenced and locked, although the building has previously been vandalized by persons gaining access under the fence (Ref. No. 15, Att. M, p. 2). Figures 1 and 2 provide a Site Location Map and a Site Map, respectively.

From 1940 to 1946, Fair Lawn Finishing Company owned the property. The property was then purchased by Frederick J. and Emily R. Wright. On-site activities of these parties are unknown. From 1947 to 1966, the site was owned and operated by New Jersey Lacquer Company, Inc. (NJ Lacquer); the main building and concrete storage shed were constructed between 1940 and 1951. From 1966 to the present, the property has been owned by Vulcan Lacquer and Coatings Co., Inc. (Vulcan Lacquer) (Ref. Nos. 4, p. 3; 33). In March 1967, Vulcan Lacquer, a Delaware corporation authorized to conduct business in New Jersey, changed its name to Pyrolac Corporation. In 1984, Pyrolac, the Delaware Corporation, merged with and into Pyrolac, the New Jersey Corporation. In 1986, Pyrolac became a wholly-owned subsidiary of Mark-Ivy Corp. (Ref. No. 4, p. 5). In May 1994, Pyrolac filed for Chapter 11 Bankruptcy; in October 1994, the case was converted from Chapter 11 reorganization to a Chapter 7 Liquidation. In April 1995, Pyrolac informed the U.S. Bankruptcy Court of its proposed abandonment of the site property (Ref. No. 4, pp. 7 through 10).

Facility operations have primarily involved the manufacture of industrial paints and coatings. During the period of operations, local and state agencies have cited Pyrolac for numerous regulatory violations related to poor or improper material storage and handling practices (Ref. Nos. 10 through 13, 15). In September 1970, Pyrolac excavated a 3-foot-wide by 3-foot-deep trench toward the northeast portion of the site. Pyrolac disposed an unknown quantity of waste material composed mainly of isopropyl alcohol, with some plastic or resin present, into the ditch. The Hawthorne Fire Chief ordered the cessation of receiving, storing, and dumping of inflammable waste materials (Ref. Nos. 10, Att. D, p. 1; 12). The trench was backfilled and is currently vegetated (Ref. Nos. 10, Att. A, p. 3; 11, p. 2).

In May 1985, the NJDEP conducted a RCRA inspection at the facility. State representatives noted the following: indoor and outdoor spills, 11 USTs, indoor floor drains, storage of waste materials for more than 90 days, incorrect manifesting of hazardous wastes. The NJDEP collected two samples at this time, one grab sample from the solvent distribution room floor drain and one composite sample from areas of stained soil near the rear of the property; the analytical results of the soil and floor drain samples indicated the presence of toluene, ethylbenzene, bis(2-ethylhexyl)phthalate, chloroform, methylene chloride, and naphthalene (Ref. No. 12, Atts. A, D).

In July 1985, the NJDEP issued an Administrative Order to Pyrolac, indicating that the current site activities show that the facility is operating as an unpermitted generator of hazardous waste and Transport, Storage, and Disposal Facility (TSDF) (Ref. No. 12, Attachment B). In August 1987, the NJDEP determined that Pyrolac had violated the State's Water Pollution Control Act and directed Pyrolac to conduct a remedial investigation (RI) (Ref. No. 12, Attachment D). On January 1, 1990, the NJDEP issued Pyrolac a NJPDES Permit, with regard to the facility's discharge to groundwater (Ref. No. 7). In June 1988 and May 1990, a total of eight groundwater monitoring wells were installed (Ref. Nos. 8, pp. 20 through 39; 9, pp. 2 through 7). Analytical data from the July 1990 groundwater sampling indicated the presence of elevated concentrations of volatile organic compounds (VOCs) and semivolatile organic compounds (SVOCs) (Ref. No. 13).

After reviewing the groundwater analytical data, Carpenter Environmental Associates, Inc. (CEA) stated that the highest detected levels of contamination exist in the monitoring wells located downgradient of the northern UST field and the backfilled disposal trench (Ref. No. 15, Att. B). On January 3, 1992, CEA collected groundwater samples from the monitoring wells. Groundwater analytical data indicated the presence of the following compounds: benzene, toluene, xylenes, ethylbenzene, tetrachloroethene, 1,1,1-trichloroethane, 1,1-dichloroethene, 1,1-dichloroethane, acetone, and methylene chloride (Ref. No. 15, Att. F). On November 24, 1993, Pyrolac executed an ACO with the NJDEP for the site cleanup, with the stipulation that the ACO would not become effective unless Pyrolac could obtain financial assistance (Ref. No. 15, Att. L, Att. N, pp. 1, 2).

On November 26, 1996, the U.S. EPA Response and Prevention Branch conducted a Removal Assessment of the Pyrolac facility. Approximately 100 drums, 200 five- to 30-gallon containers, and 400 smaller containers remained on the site. Hazardous materials noted to be present included: butyl alcohol, xylene, isopropyl alcohol, toluene, acetone, and alkyl resin solution (Ref. No. 15, Att. M). In June 1997, a building fire occurred at the facility (Ref. No. 10, Att. H). From June 1997 through February 1998, the U.S. EPA conducted a Removal Action at Pyrolac; wastes disposed off site include waste paint-related materials; waste oxidizing liquids and solids; nitrocellulose liquid; aluminum powder; and one propane gas cylinder (Ref. Nos. 17, 18). On December 16-17, 1997, Region II START conducted Integrated Assessment (IA) sampling at the facility. Region II START collected a total of five groundwater samples and 24 soil samples (Ref. No. 14). Analytical data of the groundwater samples indicate the presence of VOCs and phenols. Analytical data of soil samples indicate the presence of various VOCs, SVOCs, and pesticides (Ref. No. 14).

A release of contaminants associated with site operations to groundwater has occurred. However, groundwater drinking water supplies within 4 miles of the site are not documented or suspected to be subject to an observed release due to distance, groundwater flow direction, and municipal water supply treatment factors (Ref. Nos. 5, 8, p. 2; 14; 18; 22). There is little potential for a release of contaminants associated with the site to surface water. The Passaic River, the nearest downstream surface water body, is located 0.25 miles south of the site. In all likelihood, overland drainage occurs via the storm sewer system located on adjacent roadways (Ref. Nos. 15, Att. M; 18; 24). Although the surface waters sustain fish populations, state-issued prohibitions and health advisories exist regarding the sale and consumption of specific fishes from these waters (Ref. No. 29). No surface water intakes exist along the downstream surface water migration route (Ref. Nos. 22, 24). A minimal amount of wetland frontage is situated within the study area along the Passaic River (Ref. Nos. 24, 30). An estimated 57 people reside within 200 feet of the site boundary (Ref. No. 18, p. 3; 22, Att. M, p. 11). The 1997-1998 U.S. EPA Removal Action activities, which included media sampling and waste removal, have mitigated environmental threats due to direct contact with and release of materials in abandoned on-site waste containers (Ref. Nos. 14, 17, 18).

 County Municipal Unknown Other

10. Owner/Operator Notification on File

RCRA 3001 Date _____ CERCLA 103c Date _____
 None Unknown

*Background information indicates that as of February 1993, the City of Hawthorne holds the property title; however, the purchaser of the Tax Sale Certificate has not currently foreclosed on the property. Therefore, Vulcan remains the current owner (Ref. No. 4, p. 3).

11. Permit Information

<u>Permit</u>	<u>Permit No.</u>	<u>Date Issued</u>	<u>Expiration Date</u>	<u>Comments</u>
New Jersey Pollutant Discharge Elimination System (NJPDES)	NJ0073563	01/01/90	02/01/95	Permit for underground injection/USTs, and associated piping and contaminated soils.

Note: Pyrolac submitted Groundwater Monitoring Well Certification Forms to the NJDEP for its eight on-site monitoring wells. Five wells were installed in June 1988; at the direction of the NJDEP, three additional monitoring wells were installed in May 1990 (Ref. Nos. 8, 9).

12. Site Status

Active Inactive Unknown

13. Years of Operation: 1951 to 1995

14. Identify the types of waste sources (e.g., landfill, surface impoundment, piles, stained soil, above- or below-ground tanks or containers, land treatment, etc.) on site. Initiate as many waste unit numbers as needed to identify all waste sources on site.

(a) Waste Sources

Waste Unit No.	Waste Source Type	Facility Name for Unit
1	<u>Contaminated Soil</u>	<u>Contaminated Soil</u>
2	<u>Underground Storage Tanks (11)</u>	<u>UST Field</u>

Ref. Nos. 1 through 10.

(b) Other Areas of Concern

The facility formerly utilized a heating oil UST, located south of the main building. The UST tank capacity and contents, if any, are unknown (Ref. Nos. 8, p. 7; 16).

15. Describe the regulatory history of the site, including the scope and objectives of any previous response actions, investigations and litigation by State, local, and Federal agencies (indicate type, affiliation, date of investigations).

Local - On September 1, 1970, the Hawthorne Fire Department issued a Notice of Violation to Pyrolac. One issue cited in the notice indicated that Pyrolac should "machine a ditch around outside above ground storage area" for spill containment purposes. Pyrolac subsequently utilized a backhoe to excavate a 3'x 3'-trench located toward the eastern boundary of the property; the ditch's length was reportedly 25 feet. A former Pyrolac employee indicated that waste material was disposed in the ditch. The material was reportedly composed mainly of isopropyl alcohol, with some plastic or resin present. Pyrolac and Borough of Hawthorne representatives disagreed over the details regarding the

direction given for the construction of the ditch; Pyrolac believed that the ditch was supposed to be as deep as excavated (i.e., 3 feet). The Hawthorne Fire Chief ordered the cessation of receiving, storing, and dumping of inflammable waste materials (Ref. No. 10). The trench was backfilled and is currently vegetated (Ref. No. 11, p. 2).

As a result of facility inspections conducted in March 1977 and April 1979, the Hawthorne Bureau of Fire Prevention issued Violation Notices to Pyrolac. Cited violations included poor material handling and storage practices in indoor and outdoor work areas, as well as the long-term storage of an accumulation of returned materials (Ref. No. 10, Attachment G). On April 22, 1996, the Passaic County Department of Health received a citizen complaint which cited odors emanating from the direction of the abandoned Pyrolac facility (Ref. No. 15, Att. N, p. 2). Further information regarding the complaint is not currently available. In June 1997, a building fire occurred at the then abandoned facility. During firefighting activities, firefighters noted the presence of a "substantial amount" of chemicals in various-sized containers within the building (Ref. No. 10, Attachment H).

State - In May 1985, the NJDEP conducted a RCRA inspection at the Pyrolac facility. State representatives noted the following: indoor and outdoor spills, 11 raw material USTs, two indoor floor drains (discharge points unknown), storage of waste materials for more than 90 days, incorrect manifesting of hazardous wastes. Materials stored in the USTs included: xylene, methyl isobutyl ketone, toluene, lacquer thinner, butyl acetate, mineral spirits, and isopropyl alcohol. As a result of the inspection, the NJDEP issued a Notice of Violation to Pyrolac, citing 10 state statute violations. The NJDEP also collected two samples at this time, one grab sample from the solvent distribution room floor drain and one composite sample from areas of stained soil near the rear of the property. The exact location of the composite soil sample is unknown (Ref. No. 12, Attachment A). The analytical results of the soil and floor drain samples indicate the presence of toluene, ethylbenzene, bis(2-ethylhexyl)phthalate, chloroform, methylene chloride, and naphthalene. The composite soil sample also contained 1,1-dichloroethene; the floor drain sample also contained dibutylphthalate and isophorone (Ref. No. 12, Attachment D).

In July 1985, the NJDEP issued an Administrative Order to Pyrolac, indicating that the current site activities show that the facility is operating as an unpermitted generator of hazardous waste and TSDF (Ref. No. 12, Attachment B). Pyrolac agreed to arrange for the cleanup of the areas found to be contaminated, as per the May 1985 analytical data (Ref. No. 12, Attachment C). In August 1987 the NJDEP determined, based on the site history and the May 1985 analytical data, that Pyrolac had violated the state's Water Pollution Control Act; Pyrolac was directed to conduct an RI addressing the site discharge of pollutants (Ref. No. 12, Attachment D). On January 1, 1990, the NJDEP issued Pyrolac a NJPDES Permit, with regard to the facility's discharge to groundwater (Ref. No. 7).

Pyrolac contracted SESI to conduct the RI of the facility. The areas of concern included: the UST locations, the backfilled trench area, outdoor drum storage/spill locations, and the indoor floor drains. At the time of the investigation, the floor drains had already been sealed with cement (Ref. No. 11, pp. 1, 2). In June 1988, five on-site groundwater monitoring wells were installed; in May 1990, an additional three monitoring wells were installed (Ref. Nos. 8, pp. 20 through 39; 9, pp. 2 through 7). Analytical data from a July 1990 groundwater sampling event indicate the presence of elevated concentrations of VOCs

and SVOCs (Ref. No. 13).

In November 1990, the NJDEP conducted a NJPDES Compliance Evaluation Inspection at the facility; the associated Discharge Surveillance Report stated that analytical data from monitoring well samples indicated the presence of VOCs and base neutral/acid extractable organic compounds (Ref. No. 15, Att. A). Pyrolac's environmental consultant, CEA, reviewed the groundwater analytical data and concluded that there are two possible contamination sources, the northern UST field and the backfilled disposal trench. CEA stated that the highest detected levels of contamination exist in MW-6 and MW-8, located downgradient of these two respective waste sources (Ref. No. 15, Att. B). The NJDEP directed Pyrolac to implement a Ground Water Quality Assessment program (Ref. No. 15, Att. C).

On January 3, 1992, CEA collected groundwater samples from the eight monitoring wells for VOC analyses. Groundwater analytical data indicated the presence of the following compounds: benzene, toluene, xylenes, ethylbenzene, tetrachloroethene, 1,1,1-trichloroethane, 1,1-dichloroethene, 1,1-dichloroethane, acetone, and methylene chloride (Ref. No. 15, Att. F). In March 1992, the site case was transferred internally at the NJDEP from the Bureau of Ground Water Discharge Control to the Bureau of State Case Management (Ref. No. 15, Att. H).

On November 19, 1992, NJDEP personnel conducted an inspection at the facility. State representatives observed the following site conditions: a solvent odor throughout the facility; three indoor, sealed floor drains; poor interior/exterior material storage and handling practices; and an outdoor drum storage area with three leaking drums (Ref. No. 15, Att. I). In July 1993, the NJDEP issued a Directive and Notice to Insurers to Pyrolac and Ply-Gem Corporation (Ply-Gem), which identified the addressees as responsible parties of the on-site discharge of hazardous substances. Pyrolac was directed by the NJDEP to conduct an RI to ascertain the nature and extent of contamination, as well as to provide for the site cleanup (Ref. No. 15, Att. J). Ply-Gem subsequently disputed their liability for waste materials previously disposed in the backfilled trench (Ref. No. 15, Att. K).

On November 24, 1993, Pyrolac executed an ACO with the NJDEP for the cleanup of the site, with the stipulation that the ACO would not become effective unless Pyrolac could obtain financial assistance from the NJDEP Hazardous Discharge Site Remediation Fund (Ref. No. 15, Att. L). On January 24, 1997, the NJDEP submitted the site to the U.S. EPA for CERCLA removal action consideration (Ref. No. 15, Att. N).

Federal - On November 26, 1996, the U.S. EPA Response and Prevention Branch conducted a Removal Assessment of the Pyrolac facility; the site had been abandoned in April 1995. The property was noted to have been accessed via holes in the fence; the facility had been previously vandalized. Approximately 100 drums, 200 five- to 30-gallon containers, and 400 smaller containers remained on site. Hazardous materials noted to be present included: butyl alcohol, xylene, isopropyl alcohol, toluene, acetone, alkyl resin solution (Ref. No. 15, Att. M).

In January 1997, the U.S. EPA received a site referral from the NJDEP, requesting that the site be considered for a CERCLA Removal Action (Ref. No. 15, Att. N). In June 1997, the U.S. EPA initiated a Removal Action at Pyrolac; wastes disposed off site include waste paint-related materials; waste oxidizing liquids and solids; waste caustic alkali liquids; waste hydrogen peroxide; waste nitrocellulose liquid; waste aluminum powder; and one propane gas cylinder (Ref. No. 17). The Removal Action was conducted in conjunction with Site Assessment activities [e.g., an Integrated Assessment (IA) was conducted]. On December 16-17, 1997, Region II START, conducted sampling at the facility. Region II START collected a total of five monitoring well samples and 24 soil samples, including field duplicate samples, in order to provide analytical data to assist in the site IA evaluation under the Hazard Ranking System (HRS) (Ref. No. 14). A summary and discussion of the analytical results of the media samples are included in Part IV of the report. On February 13, 1998, the U.S. EPA completed its planned removal activities (Ref. No. 17).

- a) Is the site or any waste source subject to Petroleum Exclusion? Identify petroleum products and by-products that justify this decision.

The facility formerly utilized a heating oil UST, located south of the main building. The UST tank capacity and contents, if any, are unknown.

Ref. Nos. 8, p. 7; 16.

- b) Has normal farming application of pesticides registered under the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) occurred at the site? Have pesticides been produced or stored at the site? Have there been any leaks or spills of pesticides on site?

Based on available background information, the site has not been used for agricultural purposes. Therefore, it is not suspected that pesticides regulated under FIFRA have been applied to the site. Pesticides are not known to have been produced, stored, leaked, nor spilled on the site. However, analytical data of on-site soil samples collected in December 1997 by Region II START indicate the presence of pesticides, including 4,4'-DDE, 4,4'-DDD, 4,4'-DDT, endrin, endrin aldehyde, methoxychlor, and chlordane.

Ref. Nos. 10, Att. A, p. 2; 14, Att. B.

- c) Is the site or any waste source subject to RCRA Subtitle C (briefly explain)?

In May 1985, the NJDEP conducted a RCRA Compliance Evaluation Inspection at the facility. The July 1985 NJDEP Administrative Order indicated that the facility was operating as an unpermitted generator of hazardous waste and TSDF. As the facility did not possess a RCRA permit, RCRA-defined requirements such as filing a closure plan were not implemented; the facility has been inactive since April 1995. In addition, the 1997-1998 U.S. EPA Removal Action activities included the removal and off-site disposal of UST (north UST field) contents, drums and containers. Therefore, neither the site nor any waste source is subject to RCRA Subtitle C provisions.

Ref. Nos. 12, Atts. A, B; 15, Att. M, p. 2; 18.

- d) Is the site or any waste source maintained under the authority of the Nuclear Regulatory Commission (NRC)?

The site is an inactive industrial paint manufacturing facility. Neither the site nor any waste source is maintained under the authority of the NRC. On January 29, 1998, Region II START conducted radiation monitoring during a site visit; no significant readings above background radiation levels were noted.

Ref. Nos. 15, Att. M, p. 2; 18, p. 42.

16. Do any conditions exist on site which would warrant immediate or emergency action?

From June 1997 through February 1998, the U.S. EPA conducted a Removal Action at the facility, during which abandoned waste materials were disposed off site. Therefore, there are no known site conditions which would warrant immediate or emergency action.

Ref. Nos. 17, 18.

Preparer Kathy A. Campbell Agency Region II START Date: September 1998

PART II: WASTE SOURCE INFORMATION

For each of the waste units identified in Part I, complete the following items.

Waste Unit 1 - Contaminated Soil

Source Type

<u> </u> Landfill	<u> </u> Contaminated Soil
<u> </u> Surface Impoundment	<u> </u> Pile
<u> </u> Drums	<u> </u> Land Treatment
<u> </u> Tanks/Containers	<u> </u> Other

Description:

1. Describe the types of containers, impoundments, or other storage systems (i.e., concrete-lined surface impoundment) and any labels that may be present.

The Pyrolac site is an inactive, industrial paint manufacturing facility located in a mixed industrial and residential portion of Hawthorne, New Jersey. The business stored raw materials in numerous locations on site, including outdoor drum storage areas and 11 USTs. The UST contents included lacquer thinner, toluene, methyl isobutyl ketone, VMP naphtha, xylene, recovered solvent, isopropyl alcohol, mineral spirits, butyl alcohol, and butyl acetate. Other materials, such as methyl ethyl ketone, isophorone, and methanol, were also utilized during manufacturing processes. In September 1970, three 55-gallon drums containing cellulose acetate, composed of isopropanol, ethanol, butyl acetate, cellosolve, and ethyl acetate, were emptied into an excavated trench located centrally toward the east border of the site. The trench dimensions reportedly extended 25 feet in length, three feet in depth and three feet in width. At the direction of local officials, Pyrolac ceased dumping of material into the ditch; the trench was subsequently backfilled.

Inspection reports prepared by local, state, and federal agencies have indicated the occurrence of improper material storage and handling practices, as evidenced by the presence of outdoor leaking drums and areas of stained soils. Analytical data of surface and subsurface soil samples collected in December 1997 by Region II START indicate the presence of elevated concentrations of VOCs and SVOCs. Specific detected VOCs include: methylene chloride, toluene, ethylbenzene, and xylenes. Analytical data indicate the presence of the following SVOCs: isophorone, naphthalene, acenaphthene, phenanthrene, fluoranthene, pyrene, benzo(a)anthracene, benzo(b)fluoranthene, benzo(k)fluoranthene, and benzo(a)pyrene. Di-n-butyl, butyl benzyl, di-n-octyl, and bis(2-ethylhexyl)phthalates were also detected in site soil samples. The PCB, Aroclor-1254, was detected in eight soil samples. Variable concentrations of pesticides were detected in the surface soil samples.

PART II: WASTE SOURCE INFORMATION (Continued)

2. Describe the physical condition of the containers or storage systems (i.e., rusted and/or bulging drums).

Three intact buildings and a paved access road exist on the property; the remainder of the property is unpaved. The buildings and access road comprise the only relatively impermeable ground cover known to be located on site.

3. Describe any secondary containment that may be present (e.g., drums on concrete pad in building or aboveground tank surrounded by berm).

No soil containment structures, such as berms or diking, are located on or are surrounding the site.

Ref. Nos. 10, Atts. B, F, G; 11, p. 10; 12, Att. A; 15, Atts. A, I, K, M; 14.

Hazardous Waste Quantity

The exact area of contaminated soil is unknown. For the purposes of this report it is estimated, allowing for the existence of the on-site buildings, that three-quarters or 1.8 acres of the site contain contaminated soil ($\frac{3}{4}$ of property area x 2.4 total acres = 1.8 acres).

Ref. Nos. 4, p. 2; 15, Att. A, p. 6.

Hazardous Substances/Physical State

Analytical data of soil samples collected in 1997 by Region II START indicate the presence of the following contaminants: VOCs (i.e., methylene chloride, toluene, ethylbenzene, and xylenes), SVOCs [i.e., isophorone, naphthalene, acenaphthene, phenanthrene, fluoranthene, pyrene, benzo(a)anthracene, benzo(b)fluoranthene, benzo(k)fluoranthene, benzo(a)pyrene, and phthalates], PCBs, and pesticides. Materials are known to have been deposited on or in the ground in liquid state; other materials may have been deposited on the ground surface in a solid state.

Ref. Nos. 11, p. 10; 14; 15, Att. K.

PART II: WASTE SOURCE INFORMATION

For each of the waste units identified in Part I, complete the following items.

Waste Unit 2 - UST Field

Source Type

<input type="checkbox"/> Landfill	<input type="checkbox"/> Contaminated Soil
<input type="checkbox"/> Surface Impoundment	<input type="checkbox"/> Pile
<input type="checkbox"/> Drums	<input type="checkbox"/> Land Treatment
<input checked="" type="checkbox"/> Tanks/Containers	<input type="checkbox"/> Other

Description:

1. Describe the types of containers, impoundments, or other storage systems (i.e., concrete-lined surface impoundment) and any labels that may be present.

The Pyrolac site is an inactive, industrial paint manufacturing facility located in a mixed industrial and residential portion of Hawthorne, New Jersey. The business stored raw materials in numerous locations on the site, including inside 11 USTs. The reported UST contents are as follows: lacquer thinner, toluene, methyl isobutyl ketone, VMP naphtha, xylene, recovered solvent, isopropyl alcohol, mineral spirits, butyl alcohol, and butyl acetate. The total capacity of the on-site USTs is approximately 39,700 gallons. Each of the tanks is reportedly greater than 20 years old. However, it should be noted that during 1997-1998 U.S. EPA Removal Action, the residual contents were pumped from the tanks and disposed off site at licensed disposal facilities.

2. Describe the physical condition of the containers or storage systems (i.e., rusted and/or bulging drums).

The present physical condition of each of the USTs is unknown. Each of the tanks is reportedly greater than 20 years old. Available background information does not indicate any occurrence of tank leak testing; therefore, it is possible that the tank(s) may have leaked during the period of site operation and subsequent abandonment.

3. Describe any secondary containment that may be present (e.g., drums on concrete pad in building or aboveground tank surrounded by berm).

No secondary containment structures of the tanks are known to be present.

Ref. Nos. 15, Atts. K, M; 18.

PART II: WASTE SOURCE INFORMATION (Continued)**Hazardous Waste Quantity**

The total capacity of the on-site USTs is approximately 39,700 gallons. The reported UST contents and approximate capacities are as follows: lacquer thinner (3,800 gal.), toluene (4,000 gal.), methyl isobutyl ketone (3,800 gal.), VMP naphtha (6,000 gal.), xylene (6,000 gal.), recovered solvent (6,000 gal.), isopropyl alcohol (2,000 gal.), mineral spirits (2 tanks, each 2,000 gal.), butyl alcohol (2,000 gal.), and butyl acetate (2,000 gal.). However, the residual contents of the product-containing USTs were disposed off site during the 1997-1998 U.S. EPA Removal Action; the USTs remain in place on site. Therefore, for the purposes of this report, a quantity of one gallon of each respective material will be considered to be contained in each tank (e.g., 1 gallon per tank x 11 tanks = 11 gallons of waste material).

Ref. Nos. 11, p. 10; 12, Att. A; 18.

Hazardous Substances/Physical State

Field screening of eight tank samples was conducted during the removal action. All samples tested positive for flammability. The tank contents include the following compounds: lacquer thinner, toluene, methyl isobutyl ketone, VMP naphtha, xylene, recovered solvent, isopropyl alcohol, mineral spirits, butyl alcohol, and butyl acetate. The materials stored in the USTs were in the liquid state.

Ref. Nos. 12, Att. A; 35.

PART III. SAMPLING RESULTS

EXISTING ANALYTICAL DATA

May 1985 - On May 6, 1985, the NJDEP conducted a RCRA Inspection at the facility. State representatives noted the presence of two indoor floor drains; the discharge points of the drains are unknown. The NJDEP collected two samples at this time, one grab sample from the solvent distribution room floor drain and one composite sample from areas of stained soil near the rear of the property. The exact location of the composite soil sample is unknown (Ref. No. 12, Attachment A). The analytical results of the soil and floor drain samples indicate the presence of toluene, ethylbenzene, bis(2-ethylhexyl)phthalate, chloroform, methylene chloride, and naphthalene. The composite soil sample also contained 1,1-dichloroethene; the floor drain sample also contained dibutylphthalate and isophorone (Ref. No. 12, Attachment D).

July 1988 - Pyrolac contracted SESI in order to conduct an NJDEP-directed RI of the facility. Areas of concern included: the UST locations, the backfilled trench area, outdoor drum storage/spill locations, and the indoor floor drains. At the time of the investigation, the floor drains had already been sealed with cement (Ref. No. 11, pp. 1, 2). In June 1988, five on-site groundwater monitoring wells were installed; in May 1990, an additional three monitoring wells were installed (Ref. Nos. 8, pp. 20 through 39; 9, pp. 2 through 7). In July 1988, SESI collected five groundwater samples from the monitoring wells using dedicated sampling bailers. The five samples, and a trip blank and field blank samples, were analyzed by York Laboratories, Whippany, New Jersey for the following parameters: volatile organic compounds plus 15, base/neutral compounds plus 15, and total petroleum hydrocarbons (TPH). Laboratory Quality Assurance/Quality Control (QA/QC) data are not currently available for review. Analytical data indicate the presence of VOCs, base/neutral compounds, and TPH above NJDEP Environmental Cleanup Responsibility Act (ECRA) guidelines (Ref. No. 8, pp. 5, 6, 9).

In addition to groundwater sampling, SESI collected 13 soil samples, four field blank samples, and one trip blank sample; the samples were submitted for volatile organic compounds plus 15 and TPH analyses. The soil samples were collected from the five monitoring well borings and eight shallow, exploratory test borings. Analytical data of the soil sample from the MW-5 boring indicate the presence of elevated concentrations of VOCs (Ref. No. 8, pp. 6, 10).

July through October 1990 - On July 26-27, 1990, CEA collected eight groundwater samples from the facility's monitoring wells. The samples were submitted to AnalytiKEM, Inc. for VOC, base neutral and acid extractable SVOC, and lead analyses. No field QA/QC samples are known to have been collected during sampling. Analytical data of groundwater samples indicate the presence of VOCs and SVOCs. Table 1 presents a summary of the resulting analytical data.

**Table 1: Summary of Groundwater Analytical Data
July 26-27, 1990**

On September 7 and 10, 1990, CEA collected eight aqueous samples from the on-site monitoring wells. These samples, as well as two field blank samples, were submitted to AnalytiKEM, Inc. for acid extractable SVOC analyses. Analytical data of the groundwater samples indicate the presence of 2-methylphenol, 4-methylphenol, and 2,4-dimethylphenol. Table 2 presents a summary of the groundwater analytical data.

**Table 2: Summary of Groundwater Analytical Data
September 7 and 10, 1990**

~ = Not detected.

J = Estimated value.

In October 1990, CEA collected additional groundwater samples from the monitoring wells. The

samples were submitted to AnalytiKEM, Inc. for VOC, SVOC, and lead analyses. It should be noted that a portion of the available copy of this analytical data is illegible; however, the information does indicate the presence of detected compounds similar to those detected in the July and September 1990 analytical data (Ref. No. 13, Att. C).

January 1992 - On January 3, 1992, CEA collected groundwater samples from each of the eight monitoring wells. These samples, along with one field blank sample, were submitted to Laboratory Resources, Inc. for VOC analyses. Analytical data indicate the presence of VOCs in the groundwater samples with the exception of MW-3 and MW-4, located sidegradient of the direction of groundwater flow. Table 3 presents a summary of the groundwater analytical data. Region II START conducted an evaluation and determined that the data are acceptable with comments (Ref. No. 15, Att. G).

**Table 3: Summary of Analytical Data
January 3, 1992**

INTEGRATED ASSESSMENT SAMPLING RESULTS

On December 16-17, 1997, Region II START conducted soil and groundwater sampling as part of IA activities. A total of 24 soil samples, including two environmental duplicate samples, and five groundwater samples, including one environmental duplicate sample, were collected from the site. The samples were submitted to laboratories belonging to the U.S. EPA Contract Laboratory Program (CLP). Southwest Labs of Oklahoma, Inc. provided the Target Compound List (TCL) organic analyses and SVL Analytical, Inc. provided the Target Analyte List (TAL) inorganic analyses. Additional volume of two soil samples and one groundwater sample were submitted for matrix spike/matrix spike duplicate (MS/MSD) analysis. One trip blank sample (volatile organic analysis only) and three rinsate blanks were also submitted for QA/QC purposes. Personnel were unable to obtain sufficient sample volume from MW-6 and MW-3; groundwater samples were collected from MW-4, MW-5, MW-7, and MW-8 (Ref. No. 14, Att. A). Attachment A of Reference No. 14 provides a Sample Location Map. The complete CLP data packages are presented in Reference No. 14, Attachments B and C.

Groundwater Sampling - Analytical data of the groundwater sample collected from MW-7 indicates the presence of the most elevated concentrations of VOCs, such as ethylbenzene, benzene, and xylenes. The MW-8 sample contained the most elevated levels of SVOCs, such as 2-methylphenol, 4-methylphenol, 2,4-methylphenol, and naphthalene. Table 4 presents a summary of the December 1997 groundwater

sampling data.

**Table 4: Summary of Groundwater Organic Analytical Data

Soil Sampling - During December 1997 sampling activities, Region II START collected a total of 20 surface soil samples (S01 through S19, S24) and 4 subsurface soil samples (S20 through S23). Eight soil sample locations are located on adjacent properties (S01 through S07, and S18); the remainder of the surface soil sample locations are situated on site. Samples S07 and S18 were collected to provide representative background data (Ref. No. 14, Att. A). However, analytical data of sample S07 indicate that, although VOC concentrations were not detected, appreciable concentrations of SVOCs, Aroclor-1254, and various pesticides were present in the soil sample (Ref. No. 14, Att. B).

Table 5 presents a summary of the soil organic analytical data, excluding the environmental field duplicate samples (S20 and S24). Attachment C, pages 70 through 83, presents a summary of the soil inorganic data.

PART IV. HAZARD ASSESSMENT

GROUNDWATER ROUTE

- 1. Describe the likelihood of a release of contaminant(s) to the groundwater as follows: observed release, suspected release, or none. Identify contaminants detected or suspected and provide a rationale for attributing them to the site. For an observed release, define the supporting analytical evidence and relationship to background.**

An observed release of contaminants associated with the site to groundwater has occurred. From 1951 to 1995, the property was utilized for the manufacture of industrial paints and coatings. During its operating period raw materials, such as methyl ethyl ketone, isophorone, and butanol, were stored in both indoor and outdoor storage areas; Figure 2 presents the locations of these storage areas. In April 1995, the property was abandoned; numerous drums, tanks, and containers of waste materials remained on site until the 1997-1998 U.S. EPA Removal Action. The north UST field and former trench disposal area had previously been identified as two sources of contamination. Currently, the USTs are empty and the trench disposal area is backfilled. The reported UST former contents and approximate capacities are as follows: lacquer thinner (3,800 gal.), toluene (4,000 gal.), methyl isobutyl ketone (3,800 gal.), VMP naphtha (6,000 gal.), xylene (6,000 gal.), recovered solvent (6,000 gal.), isopropyl alcohol (2,000 gal.), mineral spirits (2 tanks, each 2,000 gal.), butyl alcohol (2,000 gal.), and butyl acetate (2,000 gal.). In addition to the UST field and former trench areas, state and local representatives have observed stained soils and poor material storage/handling practices during the facility's period of operation.

Eight monitoring wells exist on the site, with groundwater flow direction being toward the south. The MW-4 location is sidegradient and upgradient to the UST field and former trench disposal area, respectively; the MW-4 location will therefore be considered the background sample location for the purposes of this report. MW-7 is located downgradient of the UST field and MW-8 is located downgradient of the former trench disposal area. MW-5 is situated toward the southern corner of the property and is downgradient of both cited areas of concern.

In December 1997, Region II START collected five groundwater samples, including one environmental duplicate sample. The samples were submitted to U.S. EPA CLP laboratories for TCL and TAL analyses. Analytical data of the MW-5 groundwater sample indicate the presence of the following compounds at concentrations greater than three times those detected in the MW-4 sample: benzene (97 ug/l), ethylbenzene, (99 ug/l), toluene (estimated 7 ug/l), and xylenes (200 ug/l). Analytical results of the MW-7 groundwater sample indicate the presence of the following compounds at concentrations greater than three times those detected in the MW-4 sample: benzene (estimated 16 ug/l), ethylbenzene (920 ug/l), and xylenes (3,100 ug/l). The compound 1,1,1-trichloroethane, was detected in groundwater samples MW-4 (7.6 ug/l) and MW-7 (16 ug/l); the concentration detected in the MW-7 sample does not meet criteria for an observed release of this compound. Analytical data of downgradient monitoring wells also indicate the presence of phenol compounds, such as 2-methylphenol, 4-methylphenol, and 2,4-dimethylphenol, and the SVOC naphthalene; analytical data of the MW-4 sample do not indicate the presence of detectable concentrations of these compounds.

Previous analytical data of groundwater samples collected in July and September 1990 by CEA, contractor to Pyrolac, indicated similar VOC and SVOC contamination, as well as the presence of elevated concentrations of other VOCs and SVOCs (i.e., methylene chloride, 1,1-dichloroethane, tetrachloroethane, vinyl chloride, diethylphthalate, dibutylphthalate, dioctylphthalate, and isophorone).

Ref. Nos. 4, pp. 7 through 10; 7, p. 2; 8, p. 7; 11, pp. 10 through 12, 14; 13; 14; 15, Att. K, pp. 13 through 16, Att. M; 16, 17, 18.

2. **Describe the aquifer of concern; include information such as depth, thickness, geologic composition, areas of karst terrain, permeability, overlying strata, confining layers, interconnections, discontinuities, depth to water table, groundwater flow direction.**

The Pyrolac site is located within the Triassic Lowlands physiographic province of New Jersey. The aquifer of concern is the underlying Passaic Formation, formerly known as the Brunswick Formation, of the Newark Supergroup. Groundwater movement and storage occur primarily due to extensive fracturing of its component rocks. Though cracks intersect to allow omni-directional movement, water may be inhibited in traveling along certain pathways by fracture size and capacity. The Passaic Formation is mainly composed of red siltstone, shale, sandstone, and conglomerate. In the site area, the total maximum thickness of these Triassic Age rocks is estimated to be 6,000 meters, with the primary water-bearing zone ranging from less than 200 to 600 feet in depth. The permeability associated with this unit ranges from 10^{-4} to 10^{-8} centimeters per second (cm/s).

Site-specific information indicates that the bedrock is overlain by approximately 25 to 35 feet of fill and glacial sediments, generally consisting of till, silt, clay, and stratified drift. The thickness of the fill layer ranges from 1 to 7 feet in depth. During the December 1997 soil sampling activities, Region II START personnel noted the presence of sandy soils; the permeability associated with these soils ranges from 10^{-2} to 10^{-4} cm/s. A perched water table is encountered in some areas on site at approximately 10 feet below ground surface. However, groundwater in other areas occurs at approximately 25 feet below ground surface, indicating variable composition of the glacial deposits. Groundwater generally flows in a southerly direction toward the Passaic River.

Ref. Nos. 7, p. 2; 8, pp. 2 through 5; 19; 20; 21, p. 4; 18.

3. **What is the depth from the lowest point of waste disposal/storage to the highest seasonal level of the saturated zone of the aquifer of concern?**

The lowest point of waste disposal or storage is unknown. However, an observed release of contaminants associated with the site to groundwater has occurred. Therefore, the depth from the lowest point of waste disposal or storage to the highest seasonal level of the saturated zone of the aquifer of concern is zero feet.

Ref. Nos. 8, p. 2; 10; 11, p. 2; 14 .

4. **What is the permeability value of the least permeable continuous intervening stratum between the ground surface and the top of the aquifer of concern?**

The permeability of the sandy glacial deposits ranges from 10^{-2} to 10^{-4} cm/s.

Ref. No. 8, p. 5.

5. **What is the net precipitation at the site (inches)?**

The net precipitation in the vicinity of the site ranges from greater than 15 to 30 inches.

Ref. No. 21, pp. 2, 3.

6. **What is the distance to and depth of the nearest well that is currently used for drinking purposes?**

The nearest known drinking water source is a cluster of three wells maintained by the Borough of Hawthorne; this well field is located approximately 0.6 miles southwest of the site on Wagaraw Road, near the Passaic River. Each of these wells has a depth of 300 feet.

Ref. Nos. 5; 22, Att. A.

7. **If a release to groundwater is observed or suspected, determine the number of people that obtain drinking water from wells that are documented or suspected to be actually contaminated by hazardous substance(s) attributed to an observed release from the site.**

Although an observed release to groundwater has occurred, a population that obtains drinking water from wells that are documented or suspected to be actually contaminated by hazardous substances attributable to an observed release from the site does not exist. The nearest drinking water well field of three wells (Borough of Hawthorne) is located approximately 0.6 miles southwest of the site. Groundwater flows in a southerly direction toward the Passaic River.

Ref. Nos. 5; 8, p. 2; 14; 18; 22, Att. A.

8. **Identify the population served by wells located within 4 miles of the site that draw from the aquifer of concern.**

<u>Distance (miles)</u>	<u>Population</u>
0 - ¼	0
> ¼ - ½	9,900
> ½ - 1	4,640
> 1 - 2	17,320
> 2 - 3	40,550
> 3 - 4	26,190

Ref. Nos. 5, 22.

State whether groundwater is blended with surface water, groundwater, or both before distribution.

Communities within 4 miles of the site obtain their drinking water supplies from both surface water and groundwater sources. The surface water supplies are located outside the site area of concern. The communities of Hawthorne, Ridgewood, and Garfield receive all or a portion of their potable water from local wells; some or all of these communities' municipal supply wells are treated for VOC removal prior to distribution. Water obtained from these individual supply wells is often stored in a common holding vessel prior to area distribution (e.g., groundwater is blended with groundwater). An estimated 200 residents of the City of Clifton obtain drinking water from private domestic wells; other residents are served by surface water supplies located outside the site area of concern. The communities of Fair Lawn and Garfield obtain drinking water supplies from both surface water sources located outside the site area of concern and groundwater sources (i.e., municipal supply wells).

Ref. Nos. 5, 22.

Is a designated wellhead protection area within 4 miles of the site?

Wellhead protection areas (WHPAs) for the State of New Jersey have not been delineated as yet. However, the Bergen County Health Department (BCHD) is currently conducting delineation of public non-community supply well WHPAs; the BCHD has delineated more than 60 public non-community WHPAs in Bergen County. The results of this study are not currently available.

Ref. No. 23.

Does a waste source overlie a designated or proposed wellhead protection area? If a release to groundwater is observed or suspected, does a designated or proposed wellhead protection area lie within the contaminant boundary of the release?

Not applicable.

Ref. No. 23.

9. **Identify one of the following resource uses of groundwater within 4 miles of the site: commercial livestock watering, ingredient in commercial food preparation, supply for commercial aquaculture, supply for major, or designated water recreation area, excluding drinking water use, irrigation (5-acre minimum) of commercial food or commercial forage crops, unusable.**

Although groundwater is not known to be utilized for the abovementioned purposes, the potential exists for its use for these purposes.

Ref. Nos. 5, 22.

SURFACE WATER ROUTE

- 10. Describe the likelihood of a release of contaminant(s) to surface water as follows: observed release, suspected release, or none. Identify contaminants detected or suspected and provide a rationale for attributing them to the site. For observed release, define the supporting analytical evidence and relationship to background.**

There is little potential for a release of contaminants associated with the site to surface water. The Passaic River is located approximately 0.25 miles, or 1,320 feet, south of the site. Due to the presence of a mixed commercial/residential area between the site and the river, there is no direct drainage path between the site and surface water. In all likelihood, the site overland drainage occurs via the storm sewer drain system located on adjacent roadways; the storm drains discharge to the Passaic River. Neither surface water nor sediment samples were collected during the IA sampling activities.

Ref. Nos. 15, Att. M, p. 2; 18; 24.

- 11. Identify the nearest downslope surface water. If possible, include a description of possible surface drainage patterns from the site.**

The nearest downslope surface water is the Passaic River, which is located approximately 0.25 miles, or 1,320 feet, south of the site. Site runoff is expected to enter adjacent storm drains, and eventually discharge to the Passaic River.

Ref. Nos. 15, Att. M, p. 2; 24.

- 12. What is the distance in feet to the nearest downslope surface water? Measure the distance along a course that runoff can be expected to follow.**

The distance from the site to the Passaic River via possible storm drain discharge is estimated to be approximately 1,850 feet, provided that the storm sewer system contours the intervening roadways and follows a direct route to the river.

Ref. Nos. 15, Att. M, p. 2; 24.

- 13. Identify all surface water body types within 15 downstream miles.**

<u>Name</u>	<u>Water Body Type</u>	<u>Flow (cfs)</u>	<u>Saline/Fresh/Brackish</u>
Passaic River [Probable point of entry (PPE) to Dundee Lake Dam]	Large stream to river	1,143	Fresh
Passaic River (Dundee Lake Dam to migration pathway limit)	Tidal River	N/A	Brackish

Ref. Nos. 21, p. 6; 24 through 26.

14. Determine the 2-year, 24-hour rainfall (inches) for the site.

The 2-year, 24-hour rainfall in the area of the site is approximately 3.5 inches.

Ref. No. 27.

15. Determine size of the drainage area (acres) for sources at the site.

The drainage area for the site is estimated to be equal to the site area, or 2.45 acres.

Ref. No. 4, p. 2.

16. Describe the predominant soil group in the drainage area.

On-site overburden materials are composed primarily of glacial deposits and fill material. The glacial deposits typically include till, silt, clay, and stratified drift. In late 1988, SESI, contractor to Pyrolac, conducted a groundwater investigation at the site. SESI findings indicate both the existence of low-permeability soils and the presence of a perched water table in some areas of the site. Based on this information, it is estimated that the predominant soil group in the drainage area is moderately fine-textured soils with low infiltration rates.

Ref. Nos. 8, pp. 1, 2, 3, 5; 21, p. 5.

17. Determine the type of floodplain within which the site is located.

The Pyrolac property is located entirely within an area of minimal flooding.

Ref. No. 28.

18. Identify drinking water intakes in surface waters within 15 miles downstream of the point of surface water entry. For each intake identify: the name of the surface water body in which the intake is located, the distance in miles from the point of surface water entry, population served, and stream flow at the intake location.

<u>Intake</u>	<u>Distance</u>	<u>Population Served</u>	<u>Flow (cfs)</u>
None	N/A	N/A	N/A

Ref. Nos. 22, 24.

19. Identify fisheries that exist within 15 miles downstream of the point of surface water entry. For each fishery specify the following information:

<u>Fishery Name</u>	<u>Water Body Type</u>	<u>Flow (cfs)</u>	<u>Saline/Fresh/Brackish</u>
Passaic River (PPE to Dundee Lake Dam)	Large stream to river	1,143	Fresh

There is a statewide ban on the sale of all striped bass taken from New Jersey Waters. Statewide consumption advisories exist for American eel, bluefish, largemouth bass, and chain pickerel. A ban also exists on the sale and consumption of all fish and shellfish taken from the lower portion of the Passaic River; therefore, the portion of the Passaic River downstream of the Dundee Lake Dam is not considered to be a fishery with regards to the HRS evaluation.

Ref. Nos. 21, p. 6; 24 through 26, 29.

20. Identify surface water sensitive environments that exist within 15 miles of the point of surface water entry.

<u>Environment</u>	<u>Water Body Type</u>	<u>Flow (cfs)</u>	<u>Wetland Frontage (mi.)</u>
Wetlands - Passaic River	Large stream to river	1,143	1.4
State-listed endangered species habitat (<i>Lemna perpusilla</i>)	Large stream to river	1,143	N/A

Ref. Nos. 21, p. 6; 24 through 26, 30, 31.

21. If a release to surface water is observed or suspected, identify any intakes, fisheries, and sensitive environments from question Nos. 18-20 that are or may be actually contaminated by hazardous substance(s) attributed to an observed release from the site.

Intake: N/A

Fishery: N/A

Sensitive Environment: N/A

There is little potential for a release of contaminants associated with the site to surface water due to site drainage and intervening terrain between the site and surface water. No surface water intakes exist within 15 miles downstream of the probable point of entry. The Passaic River is located approximately 1,850 feet south of the site via storm sewer drainage. There is a statewide ban on the sale of all striped bass taken from New Jersey Waters. Statewide consumption advisories exist for American eel, bluefish, largemouth bass, and chain pickerel. Although sensitive environments exist within the surface water migration limit, these environments are not suspected to be contaminated by hazardous substances attributable to the site.

Ref. Nos. 22, 24 though 26, 30, 31.

22. **Identify whether the surface water is used for any of the following purposes: irrigation (5-acre minimum) of commercial food or commercial forage crops, watering of commercial livestock, commercial food preparation, recreation, potential drinking water supply.**

The surface water along the migration route is navigable and suitable for secondary contact recreational use. Therefore, the downstream surface water is considered to be a resource for recreational purposes.

Ref. Nos. 24, 25.

SOIL EXPOSURE PATHWAY

23. **Determine the number of people that occupy residences or attend school or day care on or within 200 feet of observed contamination.**

During IA sampling activities conducted in December 1997, Region II START personnel collected surface soil samples (Sample S02 through S07, S18) from seven Passaic Avenue residences located south of the site. In addition, an environmental duplicate sample (Sample S24) was collected from the Sample S07 location for QA/QC purposes. Samples S07 and S18 were collected with the intent to provide representative background concentration data. The samples were submitted to U.S. EPA CLP laboratories for TCL and TAL analyses. Table 5 in Part III of this report presents a summary of the resulting analytical data. Varying concentrations of VOCs, SVOCs, and pesticides were present in each of the intended background soil samples, as well as the on-site surface soil samples. As such, it is difficult to establish attribution of the observed contamination due to the widespread presence of varying concentrations of TCL compounds. According to census data, an average of 2.85 people resides in each Passaic County household. Therefore, an estimated 57 people reside within 200 feet of the site property.

Ref. Nos. 14; 18, p. 3; 22, Att. M, p. 11.

24. **Determine the number of people that regularly work on or within 200 feet of observed contamination.**

Since April 1995, the Pyrolac site has been inactive. One business, Vandereem's Carpentry, is located southwest of the site at 40 Schoon Avenue. The exact number of employees is unknown; however, it is estimated that a maximum of five people regularly works on the premises based on the nature of the business (e.g., small carpentry business). The Nexus Plastics, Inc. facility, which borders the site on the north, employs approximately 110 people. Therefore, an estimated 115 people regularly work within 200 feet of the property.

Ref. Nos. 4, pp. 7 through 10; 14; 18, p. 38; 34.

25. Identify terrestrial sensitive environments on or within 200 feet of observed contamination.

The site is located in a mixed industrial and residential portion of Hawthorne, New Jersey. No terrestrial sensitive environments are known to exist on or within 200 feet of observed contamination.

Ref. Nos. 5; 15, Att. M, p. 2; 30, 31.

26. Identify whether there are any resource uses, such as commercial agriculture, silviculture, livestock production or grazing within an area of observed or suspected soil contamination.

The site is located in a mixed industrial and residential portion of Hawthorne, New Jersey. None of the abovementioned resource uses occur within an area of observed or suspected soil contamination.

Ref. Nos. 5; 15, Att. M, p. 2.

AIR PATHWAY**27. Describe the likelihood of release of hazardous substances to air as follows: observed release, suspected release, or none. Identify contaminants detected or suspected and provide a rationale for attributing them to the site. For observed release, define the supporting analytical evidence and relationship to background.**

An observed release of hazardous substances to air has not been documented. The site is currently inactive and the abandoned on-site materials have been disposed off site. On September 3, 1987, SESI, a contractor to Pyrolac, conducted air monitoring at the facility using a "portable volatile organic meter." Readings above background ranged from "3 - 7 parts per million (ppm)" in the offices to "150 ppm" at an unknown location. During groundwater sampling undertaken by Pyrolac in July 1990, air monitoring was conducted using a photoionization detector (PID) at each monitoring well location. Air monitoring results indicate a range of zero units above background to 280 units above background (MW-8). During groundwater sampling conducted by CEA, contractor to Pyrolac, air monitoring was also performed using a PID at each well location; the MW-6 and MW-8 PID readings were recorded as 130 and 500 units above background, respectively.

On April 22, 1996, the Passaic County Department of Health received a citizen complaint which cited odors emanating from the direction of the abandoned Pyrolac facility. Further information regarding the complaint is not currently available. In June 1997, a building fire occurred at the inactive facility; the property had been abandoned since April 1995. During firefighting efforts, firefighters noted the presence of a "substantial amount" of chemicals in various-sized containers within the building. No air monitoring data associated with the fire are available for review. From June 1997 through February 1998, the U.S. EPA conducted a Removal Action at the Pyrolac facility. Wastes disposed off site include waste paint-related materials; oxidizing liquids

and solids; caustic alkali liquids; hydrogen peroxide; nitrocellulose liquid; aluminum powder; and one propane gas cylinder. During the December 1997 IA groundwater and soil sampling activities, Region II START personnel conducted continuous air monitoring using a PID. Air monitoring readings above background were detected at the surface soil Sample S20 location at the north side of the former drum storage building (28 units), the subsurface soil Sample S22 location at the former trench area (1,000 units), and the subsurface soil Sample S23 location at the former trench area (350 units).

Ref. Nos. 4, pp. 7 though 10; 10, Att. H; 11, p. 11; 13, Att. A, p. 46; 14, Att. A; 15, Att. F, p. 6, and Att. N, p. 2; 17; 18.

28. Determine populations that reside within 4 miles of the site.

<u>Distance (miles)</u>	<u>Population</u>
On site	0
> 0 - ¼	980
> ¼ - ½	3,930
> ½ - 1	18,670
> 1 - 2	89,300
> 2 - 3	110,670
> 3 - 4	86,070

Ref. No. 32

29. Identify sensitive environments, including wetlands and associated wetlands acreage, within 4 miles of the site.

<u>Distance (mi.)</u>	<u>Wetlands Acreage</u>	<u>Sensitive Environment</u>
0 - ¼	0	None Identified.
> ¼ - ½	0	None Identified.
> ½ - 1	20	None identified.
> 1 - 2	20	None identified.
> 2 - 3	330	Three State-listed endangered species (<i>Cryptogramma stelleri</i> , <i>Pycnanthemum torrei</i> , and <i>Scutellaria leonardii</i>).
> 3 - 4	510	One federally-listed endangered species (<i>Nicrophorus americanus</i>); two state-listed endangered species (<i>Lemna perpusilla</i> , <i>Bartramia longicauda</i>); one State-listed threatened species (<i>Clemmys insculpta</i>); and one unique biotic community (Traprock Glade/Rock Outcrop).

Ref. Nos. 24, 30, 31.

- 30. If a release to air is observed or suspected, determine the number of people that reside or are suspected to reside within the area of air contamination from the release.**

A release to air is not observed or suspected; refer to Question No. 27 for a description of likelihood of a release.

- 31. If a release to air is observed or suspected, identify any sensitive environments, listed in question No. 29, that are or may be located within the area of air contamination from the release.**

A release to air is not observed or suspected; refer to Question No. 27 for a description of likelihood of a release.

COMMITMENT FOR TITLE INSURANCE

Issued by

CHICAGO TITLE INSURANCE COMPANY

CHICAGO TITLE INSURANCE COMPANY, a Missouri corporation ("Company"), for a valuable consideration, commits to issue its policy or policies of title insurance, as identified in Schedule A, in favor of the Proposed Insured named in Schedule A, as owner or mortgagee of the estate or interest in the land described or referred to in Schedule A, upon payment of the premiums and charges and compliance with the Requirements; all subject to the provisions of Schedules A and B and to the Conditions of this Commitment.

This Commitment shall be effective only when the identity of the Proposed Insured and the amount of the policy or policies committed for have been inserted in Schedule A by the Company.

All liability and obligation under this Commitment shall cease and terminate 6 months after the Effective Date or when the policy or policies committed for shall issue, whichever first occurs, provided that the failure to issue the policy or policies is not the fault of the Company.

The Company will provide a sample of the policy form upon request.

IN WITNESS WHEREOF, CHICAGO TITLE INSURANCE COMPANY has caused its corporate name and seal to be affixed by its duly authorized officers on the date shown in Schedule A.

Schedule B - Section I

Your Reference: **VULCAN LACQUER & COATING**
This Commitment expires six (6) months after the Commitment Date.

Title No: **2007-50607**

**SCHEDULE B - SECTION I
REQUIREMENTS**

The following are the requirements to be complied with:

- 1.1 Instrument(s) creating the estate or interest to be insured must be approved, executed, delivered, recorded and properly indexed in the land records.
- 1.2 Payment of the full consideration to, or for the account of, the grantor(s) and/or mortgagor(s).
- 1.3 Payment of all applicable rates and charges to the company.
- 1.4 If the present transaction is an assignment of a mortgage or lease, an estoppel certificate executed by the owner of the fee must be obtained.
- 1.5 If the present transaction consists in whole or in part of a conveyance, mortgage or lease by a corporation, a certified copy of the Resolution of the Board of Directors authorizing the transaction together with a certificate that the corporation is solvent and the By-Laws have been compiled with must be obtained.
- 1.6 An affidavit of title executed by the seller(s) and/or mortgagor(s) must be obtained and the facts set forth therein must be considered.
- 1.7 The Company requires that you order a title continuation search ("Run-Down" or "Bring-Down") at least 24 hours prior to the scheduled closing or settlement. If the date of closing or settlement is postponed, you must order a new title continuation search.
- 1.8 The Company requires that a Notice of Settlement in connection with this transaction be filed, pursuant to N.J.S.A. 46:16A-1, et.seq., as nearly as possible to (but not more than) forty-five (45) days prior to the anticipated closing date. If the closing is postponed to a date which is more than forty-five (45) days after the filing of the Notice of Settlement, another Notice of Settlement must be filed in a timely fashion.

THE COMPANY'S LIABILITY FOR THIS REPORT IS LIMITED TO \$500.00. NO LIABILITY IS ASSUMED FOR ITEMS NOT INDEXED OR MIS-INDEXED, OR FOR MATTERS WHICH WOULD BE DISCLOSED BY AN ACCURATE SURVEY AND INSPECTION OF THE PREMISES. THIS REPORT AND THE LEGAL DESCRIPTION GIVEN HEREIN ARE BASED UPON INFORMATION SUPPLIED BY THE APPLICANT AS TO THE LOCATION AND IDENTIFICATION OF THE PREMISES IN QUESTION, AND NO LIABILITY IS ASSUMED FOR ANY DISCREPANCIES RESULTING THEREFROM. THIS REPORT IS OFFERED TO YOU AS A COURTESY AND DOES NOT REPRESENT EITHER A COMMITMENT TO INSURE TITLE, OR AN OPINION AS TO THE MARKETABILITY OF TITLE TO THE SUBJECT PREMISES.

Title No: **2007-50607**

This Commitment expires six (6) months after the Commitment Date.

**SCHEDULE B - SECTION II
EXCEPTIONS**

Taxes become a lien on lands on January 1st of each year and are payable in quarterly installments on February 1st, May 1st, August 1st and November 1st.

Our policy will not insure against taxes, water rates, assessments and other matters relating to taxes which have not become a lien up to the date of the policy or installments due after the date of the policy. Neither the tax search nor our policy covers any part of the streets on which the premises to be insured abut.

This commitment does not purport to show all the terms and provisions of the mortgage(s) contained herein, if any. Interested parties should communicate with the holder(s) thereof to consider the terms thereof, the obligation(s) secured and the effect of any unrecorded agreements in modification thereof.

For Information Only: If the instrument to be insured is a purchase money mortgage covering a 1 to 4 family dwelling and owner's insurance is not desired, written notice declining right to purchase same is required from mortgagor pursuant to statutory requirement. (Notice and Waiver form enclosed)

Schedule B of the policy or policies to be issued will contain exceptions to the following matters unless the same are disposed of to the satisfaction of the Company:

- 1.1 Defects, liens, encumbrances, adverse claims or other matters, if any, created, first appearing in the public records or attaching subsequent to the effective date hereof, but prior to the date the proposed insured acquires for value of record the estate or interest or mortgage thereon covered by this Commitment.
- 1.2 Rights of or claims by parties in possession not shown by the public records.
- 1.3 Easements, or claims of easements not shown by the public records; and encroachments, overlaps, or boundary line disputes; and other matters; all of which would be disclosed by a survey of the land satisfactory to the Company.
- 1.4 Any lien, or right to a lien, for services, labor or material heretofore or hereafter furnished, imposed by law and not shown by the public records.
- 1.5 Liability for additional assessment for taxes in connection with new construction pursuant to N.J.S.A. 54:4-63.1 and the following sections.

Conditions

Your Reference: **VULCAN LACQUER & COATING**

This Commitment expires six (6) months after the Commitment Date.

Title No:

2007-50607

CONDITIONS

1. The term mortgage, when used herein, shall include deed of trust, trust deed, or other security instrument.
2. If the proposed Insured has or acquired actual knowledge of any defect, lien, encumbrance, adverse claim or other matter affecting the estate or interest or mortgage thereon covered by this Commitment other than those shown in Schedule B hereof, and shall fail to disclose such knowledge to the Company in writing, the Company shall be relieved from liability for any loss or damage resulting from any act of reliance hereon to the extent the Company is prejudiced by failure to so disclose such knowledge. If the proposed Insured shall disclose such knowledge to the Company, or if the Company otherwise acquires actual knowledge of any such defect, lien, encumbrance, adverse claim or other matter, the Company at its option may amend Schedule B of this Commitment accordingly, but such amendment shall not relieve the Company from liability previously incurred pursuant to paragraph 3 of these Conditions.
3. Liability of the Company under this Commitment shall be only to the named proposed Insured and such parties included under the definition of Insured in the form of policy or policies committed for and only for actual loss incurred in reliance hereon in undertaking in good faith (a) to comply with the requirements hereof, or (b) to eliminate exceptions shown in Schedule B, or (c) to acquire or create the estate or interest or mortgage thereon covered by this Commitment. In no event shall such liability exceed the amount stated in Schedule A for the policy or policies committed for and such liability is subject to the insuring provisions and Conditions and the Exclusions from Coverage of the form of policy or policies committed for in favor of the proposed Insured which are hereby incorporated by reference and are made a part of this Commitment except as expressly modified herein.
4. This Commitment is a contract to issue one or more title insurance policies and is not an abstract of title or a report of the condition of title. Any action or actions or rights of action that the proposed Insured may have or may bring against the Company arising out of the status of the title to the estate or interest or the status of the mortgage thereon covered by this Commitment must be based on and are subject to the provisions of this Commitment.
5. *The policy to be issued contains an arbitration clause. All arbitrable matters when the Amount of Insurance is \$2,000,000 or less shall be arbitrated at the option of either the Company or the Insured as the exclusive remedy of the parties. You may review a copy of the arbitration rules at <<http://www.alta.org/>>.*

(hereinafter "the Company")

IMPORTANT NOTICE AND DISCLOSURE

1. By law the Company is required to advise you that the title insurance commitment issued by us may contain condition, exceptions, exclusions, limitations and requirements governing our liability and the coverage you may receive.

REAL ESTATE TITLE TRANSACTIONS ARE COMPLEX. THE COMPANY DOES NOT REPRESENT YOU AND CANNOT GIVE YOU LEGAL ADVICE. YOU ARE ENTITLED TO REVIEW THE TITLE INSURANCE COMMITMENT WITH AN ATTORNEY AT LAW OF YOUR OWN CHOOSING, AT YOUR EXPENSE, PRIOR TO THE TRANSFER OF TITLE. WE STRONGLY ADVISE THAT YOU DO SO.

2. THE ATTORNEY RETAINED BY YOU, OR BY YOUR LENDER, CLOSING OR SETTLING THIS TITLE IS NOT AN AGENT FOR AND DOES NOT ACT ON BEHALF OF THE COMPANY. THE COMPANY ASSUMES NO LIABILITY FOR ANY LOSS, COST OR EXPENSE INCURRED BY YOU BECAUSE YOUR ATTORNEY OR YOUR LENDER'S ATTORNEY HAS MADE A MISTAKE OR MISAPPLIED YOUR FUNDS.

Because the attorney is not our agent, we assume no responsibility for any information, advice or title insurance promises the attorney may give or make. Our only liability to you is under the terms of the Commitment, Policy and Closing Service Letter, if you choose to obtain one.

3. By law we are also required to advise you that we have been asked to issue a mortgagee policy to the lender in the amount shown on Schedule A of the enclosed title insurance commitment. If you have not already requested it, you have the right and opportunity to obtain title insurance in your own favor for an additional premium which we will quote on request.

Fidelity National Financial Group of Companies' Privacy Statement
July 1, 2001

We recognize and respect the privacy expectations of today's consumers and the requirements of applicable federal and state privacy laws. We believe that making you aware of how we use your non-public personal information ("Personal Information"), and to whom it is disclosed, will form the basis for a relationship of trust between us and the public we serve. This Privacy Statement provides that explanation. We reserve the right to change this Privacy Statement from time to time consistent with applicable privacy laws.

In the course of our business, we may collect Personal Information about you from the following sources:

- From applications or other forms we receive from you or your authorized representative;
- From your transactions with, or from the services being performed by, us, our affiliates, or others;
- From our internet web sites;
- From the public records maintained by governmental entities that we either obtain directly from those entities, or from our affiliates or others; and
- From consumer or other reporting agencies.

Our Policies Regarding the Protection of the Confidentiality and Security of Your Personal Information

We maintain physical, electronic and procedural safeguards to protect your Personal Information from unauthorized access or intrusion. We limit access to the Personal Information only to those employees who need such access in connection with providing products or services to you or for other legitimate business purposes.

Our Policies and Practices Regarding the Sharing of Your Personal Information

We may share your Personal Information with our affiliates, such as insurance companies, agents, and other real estate settlement service providers. We may also disclose your Personal Information:

- to agents, brokers or representatives to provide you with services you have requested;
- to third-party contractors or service providers who provide services or perform marketing or other functions on our behalf; and
- to others with whom we enter into joint marketing agreements for products or services that we believe you may find of interest.

In addition, we will disclose your Personal Information when you direct or give us permission, when we are required by law to do so, or when we suspect fraudulent or criminal activities. We also may disclose your Personal Information when otherwise permitted by applicable privacy laws such as, for example, when disclosure is needed to enforce our rights arising out of any agreement, transaction or relationship with you.

One of the important responsibilities of some of our affiliated companies is to record documents in the public domain. Such documents may contain your Personal Information.

Right to Access Your Personal Information and Ability To Correct Errors Or Request Changes Or Deletion

Certain states afford you the right to access your Personal Information and, under certain circumstances, to find out to whom your Personal Information has been disclosed. Also, certain states afford you the right to request correction, amendment or deletion of your Personal Information. We reserve the right, where permitted by law, to charge a reasonable fee to cover the costs incurred in responding to such requests.

All requests must be made in writing to the following address:

Privacy Compliance Officer
Fidelity National Financial, Inc.
601 Riverside Drive
Jacksonville, FL 32204

Multiple Products or Services

If we provide you with more than one financial product or service, you may receive more than one privacy notice from us. We apologize for any inconvenience this may cause you.

party of the second part

WITNESSETH, That the said party of the first part, for and in consideration of

ONE DOLLAR AND OTHER GOOD AND VALUABLE CONSIDERATION,

lawful money of the United States of America,

to it in hand well and truly paid by the said party of the second part, at or before the making and delivery of these presents, the receipt whereof is hereby acknowledged, and the said party of the first part being therewith fully satisfied, contented and paid, has given, granted, bargained, sold, aliened, released, conveyed, confirmed, and by these presents does give, grant bargain, sell, alien, release, convey and confirm unto the said party of the second part, and to its successors and assigns, forever, all that certain tract or parcel of land and premises, hereinafter particularly described, situate, lying and being in the Borough of Hawthorne, in the County of Passaic and State of New Jersey,

BEGINNING in the southeasterly line of lands belonging to the Erie Railroad Company (being the right of way used for a railroad, and which runs in a northerly direction out of the City of Paterson), at a point therein distant eleven hundred (1100) feet southwesterly from the point of intersection of said southeasterly line of lands belonging to the Erie Railroad Company and the easterly line of lands conveyed by Charles Wagner and wife to William Armstrong, by deed bearing date October 28th, 1922, recorded October 31, 1922, in Book D-30 of Deeds for Passaic County, page 37, said point of beginning being also the intersection of the southeasterly line of lands belonging to the Erie Railroad Company, with the division line between lands of said William Armstrong, and lands now or formerly of Frank V. P. Schoon from thence running (1) north 48 degrees 41 minutes east, along the southeasterly line of lands belonging to the said Erie Railroad Company, two hundred and seventy-five (275) feet; thence (2)

south 43 degrees 16 minutes east, three hundred thirty-two feet and eighty-two one-hundredths of a foot (332.82') to the westerly line of lands now or formerly belonging to William H. Moffitt, and shown upon a map entitled, "Map of Columbus Heights, comprising 504 desirable building lots, property of William H. Moffitt, located at Hawthorne, North Paterson, N. J." on file in the Register's Office of Passaic County aforesaid; thence (3) south 26 degrees, 27 minutes west, along said westerly line of lands now or formerly belonging to William H. Moffitt two hundred ninety-three (293) feet to the dividing line between lands of said Armstrong and of said Frank V. P. Schoon, hereinabove referred to; and thence (4) along said dividing line, north 43 degrees, 16 minutes west, four hundred forty-three feet and seventy-five one-hundredths of a foot (443.75') to the point or place of BEGINNING.

Containing 2.449 acres.

EXCEPTING THEREFROM the following:

BEGINNING at a point in the westerly curb line of Schoon Avenue where the same is intersected by the southwesterly line of the whole tract, this also being on the dead end of Schoon Avenue, and running thence (1) on a course of north 43 degrees and 16 minutes west 227.95 feet, to a point which is 10 feet, southeasterly from the Erie Railroad Right of Way Line; thence (2) north 48 degrees and 41 minutes east 3 feet; thence (3) south 43 degrees and 16 minutes east and parallel with the first course, 227.95 feet; thence (4) south 48 degrees and 41 minutes west 3 feet to the point and place of BEGINNING.

Being the same premises conveyed to New Jersey Lacquer Company, Inc., by Frederick J. Wright and Emily R. Wright, his wife, by deed dated November 7th, 1947, and recorded in the Passaic County Register's Office in Book Q 48 of deeds for said county, at page 48.

Subject to applicable zoning ordinance and to such facts as an accurate survey may disclose.

Also subject to an existing water main easement which is ten feet wide.

OFFICE OF THE REGISTER
1882-43

MORTGAGE

THIS MORTGAGE, dated the 20th day of April, 1989, is an agreement between Vulcan Lacquer & Coatings Co., Inc.

having an address at 55 Schoon Avenue Hawthorne, N.J. 07506 and INDEPENDENCE BANK OF N.J., 63 W. Allendale Avenue, Allendale, N.J.

In this mortgage, the words "I, me and my" refer to each and all of the individuals named above. The words "you and your" refer to the lending institution named above.

MORTGAGED PREMISES: I hereby mortgage to you the premises located at 55 Schoon Avenue Hawthorne Passiac New Jersey 11 17
Street Address City County State Lot Block

A legal description of the premises is contained in my deed, which is recorded at the Passaic County Clerk's or Register's Office in Book U82 on Page 42

LOAN: The mortgage will secure your loan to: (check applicable box) FRANK M. ... Dollars

me in the amount of _____ (\$ _____), plus interest on the loan, all of which I will repay according to my note dated the same date as this mortgage.

up to the amount of ---Four Hundred Thousand and 00/XX--- Dollars (\$400,000.00), plus interest on the loan, all of which will be repaid according to various notes made by Pyrolac Corporation payable to you, for which I agree to guarantee payment.

OWNERSHIP: I am the sole owner of the premises, and I have the legal right to give you a mortgage on it.

TAXES: I will pay all real estate taxes, assessments, water charges and sewer rents relating to the premises when they become due. I will not claim any credit on, or make any deduction from, the loan because of my payment of any taxes. I will provide you with proof of the payment upon your request.

MAINTENANCE: I will maintain the building(s) on the premises in good condition. I will not make major changes in the building(s) (except for repair work) or tear the building(s) down without first getting your consent.

INSURANCE: I will keep the building(s) on the premises insured at all times against loss by fire and any other hazards you may specify. I understand that I may choose the insurance company, but my choice is subject to your approval. The policies will be for at least the amounts and the time periods that you specify. The policies will name you as loss payee, which means that you will receive payment on all insurance claims. If you receive payment of a claim, you may choose to let me use the money to repair the damage, or you may use the money to reduce the loan. I will deliver to you upon your request the policies or other proof of the insurance.

SALE OF PREMISES: I will not sell or transfer ownership of the premises without your prior written consent as long as my loan remains unpaid.

DEFAULT: The note describes the acts that will constitute a default under this mortgage. Additionally, a default under any other mortgage covering the premises will constitute a default under this mortgage. If any default occurs, you can foreclose this mortgage. That means that you can arrange for the premises to be sold, as provided by law, in order to pay off what I owe you. If the money you receive from the sale is not enough to pay off what I owe you, I will still owe you the difference.

BINDING EFFECT: Until I have paid in full what I owe you, the provisions of this mortgage will be binding on me and all future owners and tenants of the premises. This mortgage is for your benefit and for the benefit of anyone to whom you may assign it.

GENERAL: You can delay enforcing any of your rights under this mortgage without losing them. Any waiver by you of any provision of this mortgage will not be a waiver of the same or any other provision on any other occasion.

RECEIPT OF COPY: I acknowledge receipt of a completely filled in copy of this mortgage.

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-05) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

TARGET PROPERTY INFORMATION

ADDRESS

55 SCHOON AVENUE
HAWTHORNE, NJ 07506

COORDINATES

Latitude (North): 40.943180 - 40° 56' 35.4"
Longitude (West): 74.150340 - 74° 9' 1.2"
Universal Transverse Mercator: Zone 18
UTM X (Meters): 571521.3
UTM Y (Meters): 4532585.5
State Plane X (Feet): 588716.1
State Plane Y (Feet): 768689.4
Elevation: 42 ft. above sea level

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.

Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

FEDERAL RECORDS

NPL: Also known as Superfund, the National Priority List database is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund program. The source of this database is the U.S. EPA.

A review of the NPL list, as provided by EDR, and dated 01/31/2008 has revealed that there is 1 NPL site within approximately 1 mile of the target property.

<u>Equal/Higher Elevation</u>	<u>Address</u>	<u>Dist / Dir</u>	<u>Map ID</u>	<u>Page</u>
<i>FAIR LAWN WELL FIELD</i>	<i>IND PARK/HENDERSON BLVD</i>	<i>1/2 - 1 E</i>	<i>0</i>	<i>24</i>

CERCLIS: The Comprehensive Environmental Response, Compensation and Liability Information System contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation and Liability Act (CERCLA). CERCLIS contains sites which are either proposed to or on the National Priorities List (NPL) and sites which are in the screening and assessment phase for possible inclusion on the NPL.

A review of the CERCLIS list, as provided by EDR, and dated 01/09/2008 has revealed that there is 1

HAWTHORNE MUNICIPAL WELLS	WAGARAW RD	1/4 - 1/2 WSW V84		249

CERC-NFRAP: Archived sites are sites that have been removed and archived from the inventory of CERCLIS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list this site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. This decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be a potential NPL site.

A review of the CERC-NFRAP list, as provided by EDR, and dated 12/03/2007 has revealed that there are 3 CERC-NFRAP sites within approximately 0.5 miles of the target property.

RCRA-TSDF: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

A review of the RCRA-TSDF list, as provided by EDR, and dated 03/06/2008 has revealed that there is 1 RCRA-TSDF site within approximately 0.5 miles of the target property.

EXECUTIVE SUMMARY

RCRA-CESQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

A review of the RCRA-CESQG list, as provided by EDR, and dated 03/06/2008 has revealed that there are 2 RCRA-CESQG sites within approximately 0.25 miles of the target property.

RCRA-NonGen: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA-NonGen list, as provided by EDR, and dated 03/06/2008 has revealed that there are 9 RCRA-NonGen sites within approximately 0.25 miles of the target property.

HIST MAJOR FACILITIES: 'Major Facility' means all facilities, located on one or more contiguous or adjacent properties owned or operated by the same person, having total combined storage capacity of: 1) 20,000 gallons or more for hazardous substances other than Petroleum or petroleum products; 2) 200,000 gallons or more for hazardous substances of all kinds. This file contains detail information that is no longer available by the Department of Environmental Protection due to security concerns.

A review of the HIST MAJOR FACILITIES list, as provided by EDR, and dated 01/02/2002 has revealed that there is 1 HIST MAJOR FACILITIES site within approximately 0.5 miles of the target property.

EXECUTIVE SUMMARY

ENG CONTROLS: Legal Document that restricts the use of contaminated property; holds owner(s) to the regulatory/statutory requirements for cleanup.

A review of the ENG CONTROLS list, as provided by EDR, and dated 12/31/2007 has revealed that there is 1 ENG CONTROLS site within approximately 0.5 miles of the target property.

<u>Equal/Higher Elevation</u>	<u>Address</u>	<u>Dist / Dir</u>	<u>Map ID</u>	<u>Page</u>
DERM COSMETIC LABS INC	84 E 24TH ST	1/4 - 1/2 SE	95	279

INST CONTROL: Sites where engineering and/or institutional controls remain in place as part of a remedial action to address soil and/or groundwater contamination. These restrictions ensure protection of human health and the environment as long as they are maintained.

A review of the INST CONTROL list, as provided by EDR, and dated 12/31/2007 has revealed that there are 2 INST CONTROL sites within approximately 0.5 miles of the target property.

ISRA: The ISRA process begins with determining if the Act applies to your type of business and transaction. The provisions of ISRA only apply to industrial establishments. What is an industrial establishment? The term "industrial establishment" refers to the type of business operations and transactions that would subject a facility to review under ISRA. An industrial establishment must meet each of the following three criteria: The place of business or real property at which such business is conducted, having a North American Industry Classification System (NAICS) code listed in N.J.A.C. 7:26 B - Appendix C subject to the specified exceptions and limitations. The place of business must have been engaged in operations on or after December 31, 1983; and The place of business must involve the generation, manufacture, refining, transportation, treatment, storage, handling, or disposal of hazardous substances or hazardous wastes.

A review of the ISRA list, as provided by EDR, and dated 01/24/2008 has revealed that there are 14 ISRA sites within approximately 0.5 miles of the target property.

HWS RE-EVAL: The locations were removed from the Known Contaminated Sites list for a variety of reasons. Some of the sites were taken off the list because they were inactive, some were not assigned a case worker and some were no longer contaminated. Inspectors from the DEP are now undertaking a full re-evaluation of each of the locations statewide. That includes visual and environmental tests to see whether contamination still exists.

A review of the HWS RE-EVAL list, as provided by EDR, and dated 09/20/2007 has revealed that there are 7 HWS RE-EVAL sites within approximately 1 mile of the target property.

EDR PROPRIETARY RECORDS

EDR Historical Auto Stations: EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc.

A review of the EDR Historical Auto Stations list, as provided by EDR, has revealed that there are 3 EDR Historical Auto Stations sites within approximately 0.25 miles of the target property.

Other Pertinent Environmental Activity Identified at Site

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

NCDB (National Compliance Data Base) supports implementation of the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) and the Toxic Substances Control Act (TSCA). The system tracks inspections in regions and states with cooperative agreements, enforcement actions, and settlements.

TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.

NJ-NJEMS (New Jersey - New Jersey Environmental Management System). The Department of Environmental Protection (NJDEP) manages large databases of environmental information in this integrated system.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

CERCLIS (Comprehensive Environmental Response, Compensation, and Liability Information System) is the Superfund database that is used to support management in all phases of the Superfund program. The system contains information on all aspects of hazardous waste sites, including an inventory of sites, planned and actual site activities, and financial information.

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and its Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate

1000333427

that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

Hazardous Waste Summary:

Waste code: K078
Waste name: K078

Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKEY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code: K078
Waste name: K078

Summary Details:

Conditions at listing December 1982): Fair Lawn, New Jersey, operates three well fields to supply water to its 32,000 residents. The wells in the Westmoreland Field are the most heavily contaminated. Lower levels have also been detected inwells in the Memorial and Cadmus Fields. Chloroform, carbon tetrachloride, and tetrachloroethylene are among the major contaminants. None of the levels has been high enough to force closing of the wells. Status July 1983): EPA recently completed a Remedial Action Master Plan outlining the investigations needed to determine the full extent of cleanup required at the site. It will guide further actions at the site.

NJ-NJEMS (New Jersey - New Jersey Environmental Management System).
 The Department of Environmental Protection (NJDEP) manages large databases of environmental information in this integrated system.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Classification: Small Quantity Generator

Hazardous Waste Summary:

Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKEY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code: D008
Waste name: LEAD

Violation Status: No violations found

databases of environmental information in this integrated system.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and its Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

Historical Generators:

Date form received by agency: 06/10/1998
Facility name: XENOPORE CORP
Classification: Small Quantity Generator

Hazardous Waste Summary:

Waste code: D002
Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

NJ-NJEMS (New Jersey - New Jersey Environmental Management System).
 The Department of Environmental Protection (NJDEP) manages large
 databases of environmental information in this integrated system.

RCRAInfo is a national information system that supports the Resource
 Conservation and Recovery Act (RCRA) program through the tracking of
 events and activities related to facilities that generate, transport,
 and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA
 program staff to track the notification, permit, compliance, and
 corrective action activities required under RCRA.

Hazardous Waste Summary:

Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKEY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Land type: Facility is not located on Indian land. Additional information is not known.
Classification: Small Small Quantity Generator
Description: Handler: generates more than 100 and less than 1000 kg of hazardous waste during any calendar month and accumulates less than 6000 kg of hazardous waste at any time; or generates 100 kg or less of hazardous waste during any calendar month, and accumulates more than 1000 kg of hazardous waste at any time

Owner/Operator Summary:

Owner/operator name: Not reported
Owner/operator address: NOT REQUIRED
NOT REQUIRED, WY 99999
Owner/operator country: Not reported
Owner/operator telephone: (212) 555-1212
Legal status: Private
Owner/Operator Type: Owner
Owner/Op start date: Not reported
Owner/Op end date: Not reported

Handler Activities Summary:

U.S. importer of hazardous waste: Unknown
Mixed waste (haz. and radioactive): Unknown
Recycler of hazardous waste: No
Transporter of hazardous waste: No
Treater, storer or disposer of HW: No
Underground injection activity: No
On-site burner exemption: Unknown
Furnace exemption: Unknown
Used oil fuel burner: No
Used oil processor: No
User oil refiner: No
Used oil fuel marketer to burner: No
Used oil Specification marketer: No
Used oil transfer facility: No
Used oil transporter: No
Off-site waste receiver: Commercial status unknown

Other Pertinent Environmental Activity Identified at Site

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AFS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

NCDB (National Compliance Data Base) supports implementation of the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) and the Toxic Substances Control Act (TSCA). The system tracks inspections in regions and states with cooperative agreements, enforcement actions, and settlements.

TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.

The NEI (National Emissions Inventory) database contains information on stationary and mobile sources that emit criteria air pollutants and their precursors, as well as hazardous air pollutants (HAPs).

NJ-NJEMS (New Jersey - New Jersey Environmental Management System). The Department of Environmental Protection (NJDEP) manages large databases of environmental information in this integrated system.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and its Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

Historical Generators:

Date form received by agency: 10/02/1995
Facility name: MAGAGNA & SORICELLI INC
Classification: Small Quantity Generator

Hazardous Waste Summary:

Waste code: NONE
Waste name: None

Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKEY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Other Pertinent Environmental Activity Identified at Site

TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.

The NEI (National Emissions Inventory) database contains information on stationary and mobile sources that emit criteria air pollutants and their precursors, as well as hazardous air pollutants (HAPs).

NJ-NJEMS (New Jersey - New Jersey Environmental Management System). The Department of Environmental Protection (NJDEP) manages large databases of environmental information in this integrated system.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and its Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.

NJ-NJEMS (New Jersey - New Jersey Environmental Management System). The Department of Environmental Protection (NJDEP) manages large databases of environmental information in this integrated system.

CERC-NFRAP:

Site ID: 0204227
Federal Facility: Not a Federal Facility
NPL Status: Not on the NPL
Non NPL Status: Removal Only Site (No Site Assessment Work Needed)

Site Description: A limited Site Investigation revealed that this site, currently owned by the City of Paterson, contained leaking underground storage tanks and limited groundwater contamination. Records from the company show that a wide variety of hazardous chemicals were stored on site in drums and tanks. Archived with Removal approval, J. Witkowski email 11/24/03.

Historical Generators:

Date form received by agency: 11/18/2004
 Facility name: MONA INDUSTRIES INC
 Classification: Small Quantity Generator

Hazardous Waste Summary:

Waste code: D001
 Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKEY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code: D002
 Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V

of the Clean Air Act.

NCDB (National Compliance Data Base) supports implementation of the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) and the Toxic Substances Control Act (TSCA). The system tracks inspections in regions and states with cooperative agreements, enforcement actions, and settlements.

TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.

The NEI (National Emissions Inventory) database contains information on stationary and mobile sources that emit criteria air pollutants and their precursors, as well as hazardous air pollutants (HAPs).

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Hazardous Waste Summary:

Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKEY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code: D002
Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

Waste code: D005
Waste name: BARIUM

Waste code: D007
Waste name: CHROMIUM

Waste code: D008

The Department of Environmental Protection (NJDEP) manages large databases of environmental information in this integrated system.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and its Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

Other Pertinent Environmental Activity Identified at Site

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.

The NEI (National Emissions Inventory) database contains information on stationary and mobile sources that emit criteria air pollutants and their precursors, as well as hazardous air pollutants (HAPs).

NJ-NJEMS (New Jersey - New Jersey Environmental Management System).
The Department of Environmental Protection (NJDEP) manages large databases of environmental information in this integrated system.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

PCS (Permit Compliance System) is a computerized management information system that contains data on National Pollutant Discharge Elimination System (NPDES) permit holding facilities. PCS tracks the permit, compliance, and enforcement status of NPDES facilities.

Hazardous Waste Summary:

Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKEY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Other Pertinent Environmental Activity Identified at Site

NJ-NJEMS (New Jersey - New Jersey Environmental Management System).
The Department of Environmental Protection (NJDEP) manages large databases of environmental information in this integrated system.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

CERCLIS (Comprehensive Environmental Response, Compensation, and Liability Information System) is the Superfund database that is used to support management in all phases of the Superfund program. The system contains information on all aspects of hazardous waste sites, including an inventory of sites, planned and actual site activities, and financial information.

Facility name: PAPERBOARD SPECIALTIES INC
Classification: Large Quantity Generator

Hazardous Waste Summary:

Waste code: NONE
Waste name: None

Waste code: D000
Waste name: Not Defined

Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKEY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code: D002
Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

Category: Non-Superfund, State Lead
 Facility Type: Paper Products Manufacturing
 Operation Status: Inactive
 Media Affected: Ground WaterSoil
 Contaminants: Volatile Organic CompoundsVolatile Organic Compounds, Metals
 Facility Status: DelineatingLevels Not of Concern
 Funding Source: Spill Fund1986 Bond FundCorporate Business Tax
 Amnt Hazardous: \$501,000\$153,000\$612,000
 Site Description: Paper products were manufactured at this facility for approximately 90 years, beginning in the early 1900s. The facility changed ownership in 1985, which resulted in a mandated environmental investigation under the Environmental Cleanup Responsibility Act (ECRA, now known as the Industrial Site Recovery Act). Paperboard Specialties, Inc. purchased the facility in 1989 and assumed responsibility for compliance with ECRA requirements, but went out of business due to bankruptcy in 1992. A number of hazardous conditions existed at the site at the site when operations ceased. Explosive materials, leaking transformers and containers of chemicals were present in the process building. containing potentially hazardous materials were being stored both inside and outside of the building. An underground storage tank located underneath the building contained 30,000 gallons of fuel oil contaminated with polychlorinated biphenyls (PCBs). In addition, lubricating oil, gasoline and fuel oil from leaking underground storage tanks has contaminated the subsurface soil and ground water. A Responsible Party for the site subsequently removed the leaking underground storage tanks under the supervision of NJDEP's Responsible Party Remediation Element. NJDEP decommissioned the underground storage tank located beneath the building and removed the waste drums and other surface materials in 2002. NJDEP's Remedial Response Element is conducting a Remedial Investigation and Remedial Action Selection (RI/RAS) to delineate contamination at the site and evaluate remedial alternatives. Investigation of the soil did not reveal significant levels of contamination. The Remedial Response Element plans to install additional monitor wells in 2004 as part of the ground water investigation. NJDEP expects to complete the Remedial Investigation and select final remedial actions for the soil and ground water in 2004. The Responsible Party has reimbursed the State of New Jersey \$534,000 for remedial work conducted at the site.

Historical Generators:

Date form received by agency: 06/22/1993
Facility name: CHET DECKER AUTO SALES
Classification: Small Quantity Generator

Hazardous Waste Summary:

Waste code: D000
Waste name: Not Defined

Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKEY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code: D008
Waste name: LEAD

Waste code: D018
Waste name: BENZENE

Waste code: D039
Waste name: TETRACHLOROETHYLENE

The NEI (National Emissions Inventory) database contains information on stationary and mobile sources that emit criteria air pollutants and their precursors, as well as hazardous air pollutants (HAPs).

NJ-NJEMS (New Jersey - New Jersey Environmental Management System). The Department of Environmental Protection (NJDEP) manages large databases of environmental information in this integrated system.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and its Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

PCS (Permit Compliance System) is a computerized management information system that contains data on National Pollutant Discharge Elimination System (NPDES) permit holding facilities. PCS tracks the permit, compliance, and enforcement status of NPDES facilities.

Hazardous Waste Summary:

Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKEY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code: D002
Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

Waste code: D004
Waste name: ARSENIC

Waste code: D018
Waste name: BENZENE

Waste code: D021
Waste name: CHLOROBENZENE

Amount (Lbs): 111290.7

Waste code: F005
Waste name: THE FOLLOWING SPENT NON-HALOGENATED SOLVENTS: TOLUENE, METHYL ETHYL KETONE, CARBON DISULFIDE, ISOBUTANOL, PYRIDINE, BENZENE, 2-ETHOXYETHANOL, AND 2-NITROPROPANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE NON-HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F002, OR F004; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.
Amount (Lbs): 2665

Corrective Action Summary:

Event date: 06/06/1991
Event: RFA Completed

Event date: 03/30/1992
Event: CA770GW

Event date: 03/30/1992
Event: CA770NG

Event date: 03/04/1993
Event: CA Prioritization, Facility or area was assigned a high corrective action priority.

Event date: 03/11/1994
Event: RFA Determination Of Need For An RFI, RFI is Necessary;

Event date: 03/11/1994
Event: RFI Workplan Approved

Event date:	03/17/1994
Event:	Stabilization Measures Evaluation, This facility is not amenable to stabilization activity at the present time for reasons other than 1- it appears to be technically infeasible or inappropriate (NF) or 2- there is a lack of technical information (IN). Reasons for this conclusion may be the status of closure at the facility, the degree of risk, timing considerations, the status of corrective action work at the facility, or other administrative considerations.

Event:	CA770GW
Event date:	09/27/2001
Event:	Current Human Exposures under Control, Yes, Current Human Exposures Under Control has been verified. Based on a review of information contained in the EI determination, current human exposures are expected to be under control at the facility under current and reasonably expected conditions. This determination will be re-evaluated when the Agency/State becomes aware of significant changes at the facility.
Event date:	08/10/2004
Event:	Igration of Contaminated Groundwater under Control, Yes, Migration of Contaminated Groundwater Under Control has been verified. Based on a review of information contained in the EI determination, it has been determined that migration of contaminated groundwater is under control at the facility. Specifically, this determination indicates that the migration of contaminated groundwater is under control, and that monitoring will be conducted to confirm that contaminated groundwater remains within the existing area of contaminated groundwater. Hazardous Waste Summary:

Waste code: D002
Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

Waste code: U002
Waste name: ACETONE (I)

Waste code: U031
Waste name: 1-BUTANOL (I)

Waste code: U069
Waste name: 1,2-BENZENEDICARBOXYLIC ACID, DIBUTYL ESTER

Waste code: U088
Waste name: 1,2-BENZENEDICARBOXYLIC ACID, DIETHYL ESTER

Waste code: U112
Waste name: ACETIC ACID ETHYL ESTER (I)

Waste code: U122
Waste name: FORMALDEHYDE

Waste code: U123
Waste name: FORMIC ACID (C,T)

Waste code: U154
Waste name: METHANOL (I)

Waste code: U159
Waste name: 2-BUTANONE (I,T)

Waste code: U161
Waste name: METHYL ISOBUTYL KETONE (I)

Waste code: U220
Waste name: BENZENE, METHYL-

Waste code: U226

The NEI (National Emissions Inventory) database contains information on stationary and mobile sources that emit criteria air pollutants and their precursors, as well as hazardous air pollutants (HAPs).

NJ-NJEMS (New Jersey - New Jersey Environmental Management System). The Department of Environmental Protection (NJDEP) manages large databases of environmental information in this integrated system.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Other Pertinent Environmental Activity Identified at Site

TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.

The NEI (National Emissions Inventory) database contains information on stationary and mobile sources that emit criteria air pollutants and their precursors, as well as hazardous air pollutants (HAPs).

NJ-NJEMS (New Jersey - New Jersey Environmental Management System). The Department of Environmental Protection (NJDEP) manages large databases of environmental information in this integrated system.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

NJ-NJEMS (New Jersey - New Jersey Environmental Management System). The Department of Environmental Protection (NJDEP) manages large databases of environmental information in this integrated system.

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and its Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

Other Pertinent Environmental Activity Identified at Site

NJ-NJEMS (New Jersey - New Jersey Environmental Management System).
The Department of Environmental Protection (NJDEP) manages large databases of environmental information in this integrated system.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Date form received by agency: 09/10/1986
Facility name: MADISON SPROCKET & GEAR INC
Classification: Large Quantity Generator

Hazardous Waste Summary:

Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKEY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Other Pertinent Environmental Activity Identified at Site

NCDB (National Compliance Data Base) supports implementation of the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) and the Toxic Substances Control Act (TSCA). The system tracks inspections in regions and states with cooperative agreements, enforcement actions, and settlements.

The NEI (National Emissions Inventory) database contains information on stationary and mobile sources that emit criteria air pollutants and their precursors, as well as hazardous air pollutants (HAPs).

NJ-NJEMS (New Jersey - New Jersey Environmental Management System). The Department of Environmental Protection (NJDEP) manages large databases of environmental information in this integrated system.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and its Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

Other Pertinent Environmental Activity Identified at Site

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.

The NEI (National Emissions Inventory) database contains information on stationary and mobile sources that emit criteria air pollutants and their precursors, as well as hazardous air pollutants (HAPs).

NJ-NJEMS (New Jersey - New Jersey Environmental Management System). The Department of Environmental Protection (NJDEP) manages large databases of environmental information in this integrated system.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

PCS (Permit Compliance System) is a computerized management information system that contains data on National Pollutant Discharge Elimination System (NPDES) permit holding facilities. PCS tracks the permit, compliance, and enforcement status of NPDES facilities.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

FEDERAL RECORDS

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Date of Government Version: 01/31/2008	Source: EPA
Date Data Arrived at EDR: 02/08/2008	Telephone: N/A
Date Made Active in Reports: 03/17/2008	Last EDR Contact: 04/28/2008
Number of Days to Update: 38	Next Scheduled EDR Contact: 07/28/2008
	Data Release Frequency: Quarterly

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Date of Government Version: 01/31/2008	Source: EPA
Date Data Arrived at EDR: 02/04/2008	Telephone: N/A
Date Made Active in Reports: 03/17/2008	Last EDR Contact: 04/28/2008
Number of Days to Update: 42	Next Scheduled EDR Contact: 07/28/2008
	Data Release Frequency: Quarterly

DELISTED NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

Date of Government Version: 01/31/2008	Source: EPA
Date Data Arrived at EDR: 02/08/2008	Telephone: N/A
Date Made Active in Reports: 03/17/2008	Last EDR Contact: 04/28/2008
Number of Days to Update: 38	Next Scheduled EDR Contact: 07/28/2008
	Data Release Frequency: Quarterly

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Date of Government Version: 10/15/1991	Source: EPA
Date Data Arrived at EDR: 02/02/1994	Telephone: 202-564-4267
Date Made Active in Reports: 03/30/1994	Last EDR Contact: 02/19/2008
Number of Days to Update: 56	Next Scheduled EDR Contact: 05/19/2008
	Data Release Frequency: No Update Planned

CERCLIS: Comprehensive Environmental Response, Compensation, and Liability Information System

CERCLIS contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). CERCLIS contains sites which are either proposed to or on the National Priorities List (NPL) and sites which are in the screening and assessment phase for possible inclusion on the NPL.

Date of Government Version: 01/09/2008	Source: EPA
Date Data Arrived at EDR: 02/05/2008	Telephone: 703-412-9810
Date Made Active in Reports: 02/20/2008	Last EDR Contact: 04/25/2008
Number of Days to Update: 15	Next Scheduled EDR Contact: 06/16/2008
	Data Release Frequency: Quarterly

CERCLIS-NFRAP: CERCLIS No Further Remedial Action Planned

Archived sites are sites that have been removed and archived from the inventory of CERCLIS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list this site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. This decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be a potential NPL site.

Date of Government Version: 12/03/2007	Source: EPA
Date Data Arrived at EDR: 12/06/2007	Telephone: 703-412-9810
Date Made Active in Reports: 02/20/2008	Last EDR Contact: 03/17/2008
Number of Days to Update: 76	Next Scheduled EDR Contact: 06/16/2008
	Data Release Frequency: Quarterly

LIENS 2: CERCLA Lien Information

A Federal CERCLA ('Superfund') lien can exist by operation of law at any site or property at which EPA has spent Superfund monies. These monies are spent to investigate and address releases and threatened releases of contamination. CERCLIS provides information as to the identity of these sites and properties.

Date of Government Version: 02/08/2008	Source: Environmental Protection Agency
Date Data Arrived at EDR: 03/07/2008	Telephone: 202-564-6023
Date Made Active in Reports: 03/20/2008	Last EDR Contact: 02/15/2008
Number of Days to Update: 13	Next Scheduled EDR Contact: 05/19/2008
	Data Release Frequency: Varies

CORRACTS: Corrective Action Report

CORRACTS identifies hazardous waste handlers with RCRA corrective action activity.

RCRA-TSDF: RCRA - Transporters, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

US BROWNFIELDS: A Listing of Brownfields Sites

Included in the listing are brownfields properties addresses by Cooperative Agreement Recipients and brownfields properties addressed by Targeted Brownfields Assessments. Targeted Brownfields Assessments-EPA's Targeted Brownfields Assessments (TBA) program is designed to help states, tribes, and municipalities--especially those without EPA Brownfields Assessment Demonstration Pilots--minimize the uncertainties of contamination often associated with brownfields. Under the TBA program, EPA provides funding and/or technical assistance for environmental assessments at brownfields sites throughout the country. Targeted Brownfields Assessments supplement and work with other efforts under EPA's Brownfields Initiative to promote cleanup and redevelopment of brownfields. Cooperative Agreement Recipients-States, political subdivisions, territories, and Indian tribes become Brownfields Cleanup Revolving Loan Fund (BCRLF) cooperative agreement recipients when they enter into BCRLF cooperative agreements with the U.S. EPA. EPA selects BCRLF cooperative agreement recipients based on a proposal and application process. BCRLF cooperative agreement recipients must use EPA funds provided through BCRLF cooperative agreement for specified brownfields-related cleanup activities.

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing

A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

STATE AND LOCAL RECORDS

SHWS: Known Contaminated Sites in New Jersey

The Known Contaminated Sites in New Jersey includes sites under the purview of the Site Remediation Program which have contamination present at levels greater than the applicable cleanup criteria for soil and/or groundwater standards. The sites appearing in Known Contaminated Sites in New Jersey are classified as either active, where the site is assigned to a specific remedial program area, or pending, where the site is awaiting assignment to a specific remedial program area. Sites where no further action (NFA) designation has been given are not included in this report unless there are other areas of identified contamination which have not been remediated. This report includes sites being remediated under all of the various regulatory programs administered by the Site Remediation Program such as: Federal Superfund Program, Federal Resource Conservation and Recovery Act (RCRA), New Jersey's Industrial Site Recovery Act (ISRA), New Jersey's Underground Storage of Hazardous Substances Act, New Jersey's Spill Compensation and Control Act, New Jersey's Solid Waste Management Act, New Jersey's Water Pollution Control Act.

LIENS: Environmental LIENS

A listing of properties with environmental liens. The listing includes sites from the Site Remediation & Waste Management Program Sites where the Department has placed either a 1st Priority or Regular Spill Fund Lien against. 1st Priority Type Lien - a lien placed against the property where the discharged occurred providing that the owners of the property have some responsibility towards the discharge. First Priority Lien is superior to other types of liens. Non-Priority (Regular) Type Lien - a lien placed against the Responsible Party & their revenues and all real and personal property, other than the real property comprising the location of the discharge.

ISRA: ISRA Database

The ISRA process begins with determining if the Act applies to your type of business and transaction. The provisions of ISRA only apply to industrial establishments. What is an industrial establishment? The term "industrial establishment" refers to the type of business operations and transactions that would subject a facility to review under ISRA. An industrial establishment must meet each of the following three criteria: The place of business or real property at which such business is conducted, having a North American Industry Classification System (NAICS) code listed in N.J.A.C. 7:26 B - Appendix C subject to the specified exceptions and limitations. The place of business must have been engaged in operations on or after December 31, 1983; and The place of business must involve the generation, manufacture, refining, transportation, treatment, storage, handling, or disposal of hazardous substances or hazardous wastes.

HWS RE-EVAL: Site Re-Evaluation Report

The locations were removed from the Known Contaminated Sites list for a variety of reasons. Some of the sites were taken off the list because they were inactive, some were not assigned a case worker and some were no longer contaminated. Inspectors from the DEP are now undertaking a full re-evaluation of each of the locations statewide. That includes visual and environmental tests to see whether contamination still exists.

EDR PROPRIETARY RECORDS

Manufactured Gas Plants: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data

Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

Oil/Gas Pipelines: This data was obtained by EDR from the USGS in 1994. It is referred to by USGS as GeoData Digital Line Graphs from 1:100,000-Scale Maps. It was extracted from the transportation category including some oil, but primarily gas pipelines.

Electric Power Transmission Line Data

Source: PennWell Corporation
Telephone: (800) 823-6277

This map includes information copyrighted by PennWell Corporation. This information is provided on a best effort basis and PennWell Corporation does not guarantee its accuracy nor warrant its fitness for any particular purpose. Such information has been reprinted with the permission of PennWell.

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:

Source: American Hospital Association, Inc.
Telephone: 312-280-5991

The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

Medical Centers: Provider of Services Listing

Source: Centers for Medicare & Medicaid Services
Telephone: 410-786-3000

A listing of hospitals with Medicare provider number, produced by Centers of Medicare & Medicaid Services, a federal agency within the U.S. Department of Health and Human Services.

Nursing Homes

Source: National Institutes of Health
Telephone: 301-594-6248

Information on Medicare and Medicaid certified nursing homes in the United States.

Public Schools

Source: National Center for Education Statistics
Telephone: 202-502-7300

The National Center for Education Statistics' primary database on elementary and secondary public education in the United States. It is a comprehensive, annual, national statistical database of all public elementary and secondary schools and school districts, which contains data that are comparable across all states.

Private Schools

Elevation:	42 ft. above sea level

USGS TOPOGRAPHIC MAP

Target Property Map:	40074-H2 PATERSON, NJ
Most Recent Revision:	1995

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General South

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

<u>Target Property County</u>	FEMA Flood <u>Electronic Data</u>
PASSAIC, NJ	YES - refer to the Overview Map and Detail Map

Flood Plain Panel at Target Property: 340400001C

Additional Panels in search area: 340404002A
34003C0159F
34003C0167F

NATIONAL WETLAND INVENTORY

<u>NWI Quad at Target Property</u>	NWI Electronic <u>Data Coverage</u>
PATERSON	YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

Search Radius:	1.25 miles
Location Relative to TP:	1/4 - 1/2 Mile WSW
Site Name:	Hawthorne Municipal Wells
Site EPA ID Number:	NJD980771679
Surficial Aquifer Flow Dir.:	TOWARD THE PASSAIC RIVER.
Measured Depth to Water:	unknown.
Hydraulic Connection:	A hydraulic connections exists between the surficial alluvial aquifer and the underlying artesian bedrock (lower) aquifer. Isolated clay deposits may intermittently result in a non-continuous perched water table above the alluvial aquifer.
Sole Source Aquifer:	No information about a sole source aquifer is available
Data Quality:	Information based on site-specific subsurface investigations is documented in the CERCLIS investigation report(s)

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

<u>MAP ID</u>	<u>LOCATION</u> <u>FROM TP</u>	<u>GENERAL DIRECTION</u> <u>GROUNDWATER FLOW</u>
Not Reported		

* ©1996 Site-specific hydrogeological data gathered by CERCLIS Alerts, Inc., Bainbridge Island, WA. All rights reserved. All of the information and opinions presented are those of the cited EPA report(s), which were completed under a Comprehensive Environmental Response Compensation and Liability Information System (CERCLIS) investigation.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. The following information is based on Soil Conservation Service SSURGO data.

Soil Map ID: 1

Soil Component Name: Dunellen

Soil Surface Texture: sandy loam

Hydrologic Group: Class A - High infiltration rates. Soils are deep, well drained to excessively drained sands and gravels.

Soil Drainage Class: Well drained

Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: Low

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

Soil Layer Information							
Layer	Boundary		Soil Texture Class	Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
	Upper	Lower		AASHTO Group	Unified Soil		
1	0 inches	7 inches	sandy loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	COARSE-GRAINED SOILS, Sands, Sands with fines, Clayey sand.	Max: 141 Min: 42	Max: 6 Min: 5.1
2	7 inches	14 inches	sandy loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	COARSE-GRAINED SOILS, Sands, Sands with fines, Clayey sand.	Max: 141 Min: 42	Max: 6 Min: 5.1
3	14 inches	20 inches	sandy loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	COARSE-GRAINED SOILS, Sands, Sands with fines, Clayey sand.	Max: 141 Min: 42	Max: 6 Min: 5.1
4	20 inches	30 inches	sandy loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	COARSE-GRAINED SOILS, Sands, Sands with fines, Clayey sand.	Max: 141 Min: 42	Max: 6 Min: 5.1

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Soil Layer Information							
Layer	Boundary		Soil Texture Class	Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
	Upper	Lower		AASHTO Group	Unified Soil		
5	30 inches	42 inches	sandy loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	COARSE-GRAINED SOILS, Sands, Sands with fines, Clayey sand.	Max: 141 Min: 42	Max: 6 Min: 5.1
6	42 inches	70 inches	loamy sand	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	COARSE-GRAINED SOILS, Sands, Sands with fines, Clayey sand.	Max: 141 Min: 42	Max: 6 Min: 5.1

Soil Map ID: 2

Soil Component Name: Water

Soil Surface Texture: sandy loam

Hydrologic Group: Class A - High infiltration rates. Soils are deep, well drained to excessively drained sands and gravels.

Soil Drainage Class:
Hydric Status: Unknown

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

No Layer Information available.

Soil Map ID: 3

Soil Component Name: Urban land

Soil Surface Texture: variable

Hydrologic Group: Class A - High infiltration rates. Soils are deep, well drained to excessively drained sands and gravels.

Soil Drainage Class:

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: Not Reported

PHYSICAL SETTING SOURCE RECORDS SEARCHED

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)

Source: United States Geologic Survey

EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Scanned Digital USGS 7.5' Topographic Map (DRG)

Source: United States Geologic Survey

A digital raster graphic (DRG) is a scanned image of a U.S. Geological Survey topographic map. The map images are made by scanning published paper maps on high-resolution scanners. The raster image is georeferenced and fit to the Universal Transverse Mercator (UTM) projection.

HYDROLOGIC INFORMATION

Flood Zone Data: This data, available in select counties across the country, was obtained by EDR in 1999 from the Federal Emergency Management Agency (FEMA). Data depicts 100-year and 500-year flood zones as defined by FEMA.

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002 and 2005 from the U.S. Fish and Wildlife Service.

State Wetlands Data: Wetlands Inventory

Source: Department of Environmental Protection

Telephone: 609-984-2243

HYDROGEOLOGIC INFORMATION

AQUIFLOW^R Information System

Source: EDR proprietary database of groundwater flow information

EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit

Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Services

The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Services (NRCS)

Telephone: 800-672-5559

SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Services, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

LOCAL / REGIONAL WATER AGENCY RECORDS

FEDERAL WATER WELLS

PWS: Public Water Systems

Source: EPA/Office of Drinking Water

Telephone: 202-564-3750

Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

PWS ENF: Public Water Systems Violation and Enforcement Data

Source: EPA/Office of Drinking Water

Telephone: 202-564-3750

Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

USGS Water Wells: USGS National Water Inventory System (NWIS)

This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

EDR Environmental LienSearch™ Report

The EDR Environmental LienSearch Report provides results from a search of available current land title records for environmental cleanup liens and other activity and use limitations, such as engineering controls and institutional controls.

A network of professional, trained researchers, following established procedures, uses client supplied address information to:

- search for parcel information and/or legal description;
- search for ownership information;
- research official land title documents recorded at jurisdictional agencies such as recorders' offices, registries of deeds, county clerks' offices, etc.;
- access a copy of the deed;
- search for environmental encumbering instrument(s) associated with the deed;
- provide a copy of any environmental encumbrance(s) based upon a review of key words in the instrument(s) (title, parties involved, and description); and
- provide a copy of the deed or cite documents reviewed.

Thank you for your business.
Please contact EDR at 1-800-352-0050
with any questions or comments.

This Indenture,

Made the 7th day of February in the year of our Lord
One Thousand Nine Hundred and Sixty-Six.

Between
NEW JERSEY LACQUER COMPANY, INC.
a corporation of the State of New Jersey, having its office at
55 Schoon Avenue, in the Borough of Hawthorne, County of Passaic
and State of New Jersey,

And
VULCAN LACQUER AND COATING CO., INC.
a Delaware corporation, having its principal office at 51 TRISTED
Street, Brooklyn, New York,

party of the first part
PASSAIC CO. N.J.
1936 FEB -4 PM 3:42
EDWARD J. WOLAK
REGISTER
party of the second part;

Witnesseth, That the said party of the first part, for and in consideration of
ONE DOLLAR AND OTHER GOOD AND VALUABLE CONSIDERATION,

lawful money of the United States of America,

as it is hereunto well and truly paid by the said party of the second part, at or before the writing and delivery of these presents, the receipt whereof is hereby acknowledged, and the said party of the first part being thereunto fully satisfied, consented and paid, has given, granted, bargained, sold, aliened, released, conveyed, confirmed, quit, and confirmed, with full power, sole privilege, grant bargain, sell, alien, release, assign, convey, and confirm unto the said party of the second part and to its SUCCESSORS and assigns, forever, all that certain land or parcel of land and premises, hereinafter particularly described, situate, lying and being in the Borough of Hawthorne, and State of New Jersey, in the County of Passaic

BEGINNING in the southeasterly line of lands belonging to the Erie Railroad Company (being the right of way used for a railroad, and which runs in a northerly direction out of the City of Paterson), at a point therein distant eleven hundred (1100) feet southwesterly from the point of intersection of said southeasterly line of lands belonging to the Erie Railroad Company and the easterly line of lands conveyed by Charles Wagner and wife to William Armstrong, by deed bearing date October 28th, 1922, recorded October 31, 1922, in Book D-30 of Deeds for Passaic County, page 37, said point of beginning being also the intersection of the southeasterly line of lands belonging to the Erie Railroad Company, with the division line between lands of said William Armstrong, and lands now or formerly of Frank V. F. Schoon from thence running (1) north 48 degrees 41 minutes east, along the southeasterly line of lands belonging to the said Erie Railroad Company, two hundred and seventy-five (275) feet; thence (2) south 17 degrees 30 minutes east, to the southeasterly line of lands

D/7

south 43 degrees 16 minutes east, three hundred thirty-two feet and eighty-two one-hundredths of a foot (332.82') to the westerly line of lands now or formerly belonging to William N. Moffitt, and shown upon a map entitled, "Map of Columbus Heights, comprising 304 desirable building lots, property of William N. Moffitt, located at Hawthorne, North Paterson, N. J." on file in the Register's Office of Passaic County aforesaid; thence (3) south 26 degrees, 27 minutes west, along said westerly line of lands now or formerly belonging to William N. Moffitt two hundred ninety-three (293) feet to the dividing line between lands of said Armstrong and of said Frank V. P. Schoon, hereinabove referred to; and thence (4) along said dividing line, north 43 degrees, 16 minutes west, four hundred forty-three feet and seventy-five one-hundredths of a foot (443.75') to the point or place of BEGINNING.

Containing 2.449 acres.

EXCEPTING THEREFROM the following:

BEGINNING at a point in the westerly curb line of Schoon Avenue where the same is intersected by the southwesterly line of the whole tract, this also being on the dead end of Schoon Avenue, and running thence (1) on a course of north 43 degrees and 16 minutes west 227.95 feet, to a point which is 10 feet, southeasterly from the Erie Railroad Right of Way Line; thence (2) north 48 degrees and 41 minutes east 3 feet; thence (3) south 43 degrees and 16 minutes east and parallel with the first course, 227.95 feet; thence (4) south 48 degrees and 41 minutes west 3 feet to the point and place of BEGINNING.

Being the same premises conveyed to New Jersey Lacquer Company, Inc., by Frederick J. Wright and Emily R. Wright, his wife, by deed dated November 7th, 1947, and recorded in the Passaic County Register's Office in Book O 48 of Deeds for said county, at page 48.

Subject to applicable zoning ordinance and to such facts as an accurate survey may disclose.

Also subject to an existing water main easement which is ten feet wide.

RECORDED
INDEXED
1948
MAY 12 1948
U62-43

Together with all and singular the houses, buildings, trees, ways, waters, profits, privileges and advantages, with the appurtenances to the same belonging or in anywise appertaining; Also, all the estate, right, title, interest, property, claim and demand whatsoever, of the said party of the first part, of, in and to the same, and of, in and to every part and parcel thereof, **TO HAVE AND TO HOLD**, all and singular the above described land and premises, with the appurtenances, unto the said party of the second part, its SUCCESSORS and assigns, to the only proper use, benefit and behoof of the said party of the second part, its SUCCESSORS and assigns forever.

And the said party of the first part for itself and its successors, does covenant, promise and agree to and with the said party of the second part, its SUCCESSORS and assigns, that it has not made done, committed, executed or suffered any act or acts, thing or things whatsoever, whereby or by means whereof the above mentioned and described premises, or any part or parcel thereof, now are, or at any time hereafter shall or may be impeached, charged or encumbered, in any manner or way whatsoever, except as aforesaid.

In WITNESS WHEREOF, the said party of the first part has caused these presents to be signed by its Secretary, and its corporate seal to be hereunto affixed and attested by the day and year first above written.

NEW JERSEY LACQUER COMPANY, INC.
Edwin Miller
EDWIN MILLER, President

Joseph Miller
JOSEPH MILLER, Secretary

State of New Jersey, } ss:
County of Essex

Do hereby certify, that on this 4th day of February, Nineteen hundred and sixty-six, before me

the within, a personally appeared JOSEPH MILLER, who being by me duly sworn on a 10 oath, says that he is the Secretary of NEW JERSEY LACQUER COMPANY, INC., the Grantor named in the foregoing instrument; that he well knows the corporate seal of said corporation; that the seal affixed to said instrument is the corporate seal of said corporation; that the said seal was so affixed and the said instrument signed and delivered by EDWIN MILLER

who was at the date thereof the President of said corporation, in the presence of this deponent, and said deponent, at the same time substantiated that he signed, sealed and delivered the same as a 10 voluntary act and deed, and as the voluntary act and deed of said corporation, by virtue of authority from its Board of Directors, and that deponent, at the same time, subscribed his name to said instrument as an attesting witness to the execution thereof.

Witness my hand and subscribed before me at Newark, New Jersey the date aforesaid

SUMMARY

- ***City Directories:***

Business directories including city, cross reference and telephone directories were reviewed, if available, at approximately five year intervals for the years spanning 1920 through 2003. (These years are not necessarily inclusive.) A summary of the information obtained is provided in the text of this report.

This report compiles information by geocoding the subject properties (that is, plotting the latitude and longitude for such subject properties and obtaining data concerning properties within 1/8th of a mile of the subject properties). There is no warranty or guarantee that geocoding will report or list all properties within the specified radius of the subject properties and any such warranty or guarantee is expressly disclaimed. Accordingly, some properties within the aforementioned radius and the information concerning those properties may not be referenced in this report.
